Unit description

The purpose of risk management is the creation and protection of value. It improves performance, encourages innovation and supports the achievement of objectives. Risk management refers to activities that direct and control an organisation in terms of risk, including the identification, analysis, treatment, monitoring, communication of risk. This unit addresses all these elements, using an established risk management framework based on international standards. The framework is applied to a range of risks (e.g. financial, operational, conduct, strategic) and contexts. It also addresses the systems of risk governance in an organisation to ensure that risk management is effective, with a special focus on risk and ethical culture.
