Prerequisites

Admission to MEnv or PGDipEnv or PGCertEnv or MEnvEd or PGDipEnvEd or PGCertEnvEd or MEnvMgt or PGCertEnvMgt or MEnvStud or PGDipEnvStud or MEnvPlan or MEnvSc or MSusDev or PGDipSusDev or PGCertSusDev or MWldMgt or PGDipWldMgt or PGCertWldMgt or MClimCh or MSc or PGDipSc or PGCertSc

Corequisites

Co-badged status

Unit description

The aim of this unit is to provide understanding of how environmental science influences management and decision making. The unit introduces students to the major chemical, physical and ecological processes that effect and control natural and anthropogenic environmental impacts. In this unit the disciplinary concerns and environmental principles within geoscience, ecology, chemistry and physics of pollution are explored and linkages among these disciplines emphasised from the viewpoint of science.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

Understand the scientific methodology and its application to analysing and managing environmental problems.

Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.

Develop skills in synthesising information on environmental science research, and presenting it in written, oral and visual forms.

Develop skills in both individual research and working in groups.

Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

## Assessment Tasks

Name	Weighting	Due
<u>Literature review</u>	40%	13 May 2014
<u>Exercises</u>	30%	25 March 2014
<u>Individual participation</u>	10%	3 June 2014
<u>Presentation</u>	20%	3 June 2014

### Literature review

Due: **13 May 2014**

Weighting: **40%**

At the first meeting for this unit you will be randomly assigned to one of the three disciplines of environmental chemistry, geosciences or ecology, and **you must restrict your review to the role of science in environmental management for that discipline**. You may decide to review one specific or a range of topics discussed in the class.

Scientific papers can be pretty daunting at first but this is the form in which original research first appears. Primary scientific references describe the rationale for the investigation, the approaches, methods and the findings. Secondary references are a step removed from the original work and include review articles. You will be writing a review article, and **you must include at least 15 peer reviewed scientific papers** that report the results of research in your assigned discipline. Each student should independently decide which specific topic to review. The topic must be in the category of the assigned discipline.

You are also encouraged to look critically at scientific data. In the first lecture we learn about the nature of science and why scientific experiments can be so difficult to carry out. The

experimental design and execution inevitably has many shortcomings and if you come to appreciate the inherent difficulties you will be better equipped to spot weaknesses in published research and to undertake critical review.

**Your review should be no longer than 3500 words**, excluding title page, executive summary, tables, graphs and reference list. Use sub-headings to structure your review. You must use the guidelines provided in the [GSE Writing Guide](#).

Assessment will be according to guidelines provided at the first lecture.

Extensions will only be granted for exceptional circumstance (which does **not** include workload or computer problems!) and with **prior** written permission by the unit convenor. Unapproved late submission will attract a 10% per calendar day penalty.

The final assignment mark will be marked out of 40, as the contribution to the final mark in the unit. The marks allocated for the various assessment criteria are as in the table below.

### **Criterion**

#### **Weighting**

##### Description

- *Clearly articulates aims and scope of review*
- *Accurately and succinctly describes objectives and outcomes of review literature*

8

##### Analysis

- *Contribution of reviewed literature*
- *Evidence evaluated critically*
- *Strengths and weaknesses clearly identified*

20

##### Presentation

- *Well-planned review with clear structure, sub-headings and logical argument firmly based on the literature cited*
- *Well written paper formatted for effective communication with correct grammar and spelling and correct use of professional terminology as appropriate*
- *Literature correctly cited and full bibliographic details provided*

12

- Penalty: Late Submission (10% per day)

### **Total**

**40**

On successful completion you will be able to:

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in synthesising information on environmental science research, and presenting it in written, oral and visual forms.
- Develop skills in both individual research and working in groups.
- Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

## Exercises

Due: **25 March 2014**

Weighting: **30%**

Three exercises will be distributed during the first half of the semester after completion of each section of the unit (environmental chemistry, geoscience and ecology). Participants must complete all 3. It is important that exercises are completed promptly following the lectures to reinforce the learning process.

**Marks:** 10 marks for each exercise; 30 marks total. ie. 30% of the total unit mark.

**Due:** One week after distribution of exercises. The due dates for each take home exercise are:

Environmental Chemistry: 25 March 2014

Geoscience: 8 April 2014

Ecology: 6 May 2014

**Late exercises:** Late penalties - 0.5 marks off for each day of late submission. No exercise will be accepted one week after its due date.

On successful completion you will be able to:

- Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

## Individual participation

Due: **3 June 2014**

Weighting: **10%**

Each team member of the project work will receive additional mark of up to 10% of the total mark for individual participation in the presentation part and the active discussion role during the

presentations, in accordance to the following criteria:

**Criterion**

**Weighting**

Delivery

- *Timing (balanced, total time effectively used);*
- *Manner (natural, purposeful, eye contact);*
- *Vocal quality & language (varied, pleasant, appropriate)*

5

Participation

- *Participation to the presentation*
- *Participation to answering questions*
- *Participation to presentation discussion*
- *Attendance*

5

**Total**

**10**

On successful completion you will be able to:

- Develop skills in synthesising information on environmental science research, and presenting it in written, oral and visual forms.
- Develop skills in both individual research and working in groups.

## Presentation

Due: **3 June 2014**

Weighting: **20%**

Students will be assigned to groups of about 4 participants to research on a topic related to the science of climate change, its impacts and management strategies. Suggested topics will be presented to the class on the first week. Groups will need to finalise their choice and lodge it with the unit convenor by week 5.

You will have to meet outside of the class time to allocate research tasks, collate material and develop your presentation. Groups will have a 5 minute presentation per participant in the group + 10 minutes for questions (groups containing 3 participants will have 15 minutes for the presentation, while those with 4 participants will have 20 minutes time for presentations). Groups will give their presentations to the rest of the class. You may use any presentation format you

like: lecture, seminar, poster, role-play, video etc. Groups will be allocated a single mark of up to 20% of the total mark for the teamwork presentation, which will be assessed according to criteria to be provided. All members of the group must play an active part in either preparation of the material or its presentation.

The group project presentations will be assessed based on the criteria outlined in the following table:

**Criterion**

**Weighting**

Content

- *Quality of research*
- *Relevance to assignment objectives*

8

Design

- *Structure*
- *Logic*
- *Effectiveness*
- *Originality*

4

Visual aids

- *Text (clear, brief, focused)*
- *Illustrations (clarity, relevance)*
- *Originality*

4

Questions

- *answered the question that was asked*
- *brief and comprehensive answers*
- *reveal good depth of knowledge*

4

**Total**

**20**

On successful completion you will be able to:

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in synthesising information on environmental science research, and presenting it in written, oral and visual forms.
- Develop skills in both individual research and working in groups.
- Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

## **Delivery and Resources**

### **Requirements to Complete this Unit Satisfactorily**

Students must submit the assignment, attend groupwork presentation and gain a final mark of at least 50% to complete this unit satisfactorily.

Students are required to attend at least 80% of the formal classes, and will be asked to sign an attendance sheet. Attendance may be taken into account when assigning final grades for the unit where marks are on the border between one grade and the next.

### **Technologies Used and Required**

Students will need access to computer to review literature and complete the assessment tasks. Submissions of the assessment tasks will be arranged through iLearn. Academic search engines (ISI Web of Knowledge and Scopus) and submission of the assessment tasks will be discussed during the first night of the class.

### **What has changed**

The content of the unit remains the same as in the previous year. The weekly exercises are new and different to the previous years.

### **Recommended Texts/Materials**

There is no single text for this course. References will be provided with the lecture material. Background reading can be found in the following:

### Journal Articles

Use of ISI Web of Knowledge or Scopus to search and access scientific literature published in peer-reviewed journals.

## Unit Schedule

Week	Topics	Lecturer
1	Introduction to Environmental Science What is science? Introduction to Scientific Method and Practice	All
2	Environmental Chemistry: basic concepts	Strezov
3	Environmental Chemistry in Environmental Management: some examples	Strezov
4	Geoscience basic concepts	Wright
5	Geoscience in Environmental Management: some examples	Wright
6	Ecology: basic concepts	Boomer
	<b>MID SEMESTER BREAK</b>	

7	Ecology in Environmental Management: some examples	Boomer
8	Climate change 1: environmental technology	Strezov
9	Climate change 2: geoscience	Wright
10	Climate change 3: ecology	Boomer
11	Group project workshop	Strezov
12	Group Project Presentation	Strezov
13	Group Project Presentation	Strezov

## Learning and Teaching Activities

### Lectures

Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology

### Class discussions

Class discussions throughout the lectures, specifically during the student presentations

### Workshops

In-class workshops on case studies

### Personal readings

Readings of peer-reviewed journal articles

## Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy [http://mq.edu.au/policy/docs/academic\\_honesty/policy.html](http://mq.edu.au/policy/docs/academic_honesty/policy.html)

Assessment Policy <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Grievance Management Policy [http://mq.edu.au/policy/docs/grievance\\_management/policy.html](http://mq.edu.au/policy/docs/grievance_management/policy.html)

Disruption to Studies Policy [http://www.mq.edu.au/policy/docs/disruption\\_studies/policy.html](http://www.mq.edu.au/policy/docs/disruption_studies/policy.html) *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

## Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student\\_conduct/](https://students.mq.edu.au/support/student_conduct/)

## Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

## Learning Skills

Learning Skills ([mq.edu.au/learningskills](http://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

## Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

## Student Enquiries

For all student enquiries, visit Student Connect at [ask.mq.edu.au](http://ask.mq.edu.au)

## IT Help

For help with University computer systems and technology, visit <http://informatics.mq.edu.au/help/>.

When using the University's IT, you must adhere to the [Acceptable Use Policy](#). The policy applies to all who connect to the MQ network including students.

## Graduate Capabilities

### PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of

knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

### **Learning outcomes**

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.

### **Assessment tasks**

- Literature review
- Exercises
- Presentation

### **Learning and teaching activities**

- Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology
- Class discussions throughout the lectures, specifically during the student presentations
- In-class workshops on case studies
- Readings of peer-reviewed journal articles

## **PG - Critical, Analytical and Integrative Thinking**

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

### **Learning outcomes**

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in both individual research and working in groups.

### **Assessment tasks**

- Literature review

- Exercises
- Presentation

## **Learning and teaching activities**

- Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology
- Class discussions throughout the lectures, specifically during the student presentations
- In-class workshops on case studies
- Readings of peer-reviewed journal articles

## **PG - Research and Problem Solving Capability**

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

## **Learning outcomes**

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in both individual research and working in groups.
- Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

## **Assessment tasks**

- Literature review
- Exercises
- Presentation

## **Learning and teaching activities**

- Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology
- Class discussions throughout the lectures, specifically during the student presentations
- In-class workshops on case studies
- Readings of peer-reviewed journal articles

## PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

### Learning outcomes

- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in synthesising information on environmental science research, and presenting it in written, oral and visual forms.
- Develop skills in both individual research and working in groups.

### Assessment tasks

- Literature review
- Individual participation
- Presentation

### Learning and teaching activities

- Class discussions throughout the lectures, specifically during the student presentations

## PG - Engaged and Responsible, Active and Ethical Citizens

Our postgraduates will be ethically aware and capable of confident transformative action in relation to their professional responsibilities and the wider community. They will have a sense of connectedness with others and country and have a sense of mutual obligation. They will be able to appreciate the impact of their professional roles for social justice and inclusion related to national and global issues

This graduate capability is supported by:

### Learning outcomes

- Be able to critically review peer-reviewed scientific literature that deals with environmental science problems.
- Develop skills in both individual research and working in groups.
- Apply scientific knowledge to develop realistic strategies for dealing with complex environmental problems.

### Assessment tasks

- Individual participation

- Presentation

## **Learning and teaching activities**

- Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology
- Class discussions throughout the lectures, specifically during the student presentations
- In-class workshops on case studies

## **PG - Capable of Professional and Personal Judgment and Initiative**

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

## **Learning outcomes**

- Understand the scientific methodology and its application to analysing and managing environmental problems.
- Develop skills in both individual research and working in groups.

## **Assessment tasks**

- Individual participation
- Presentation

## **Learning and teaching activities**

- Lectures from 3 academic staff members on environmental chemistry, geoscience and ecology
- Class discussions throughout the lectures, specifically during the student presentations
- In-class workshops on case studies
- Readings of peer-reviewed journal articles
