Unit description
Many professionals in the broad areas of environmental science, management and planning use Geographic Information Systems (GIS) to analyse and map spatial information. This unit is an introductory GIS unit for postgraduates. It is designed for students who have not previously studied GIS. It covers the underlying concepts of GIS, applications, the use of commercial GIS software, and will develop for students a GIS skills set. The practical program focuses on the basics of GIS analysis methods and map creation. The GIS software used is ArcGIS. Students enrolling in this unit must have access to a computer with the Windows operating system. Mac or Linux system will not be supported.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes

On successful completion of this unit, you will be able to:

Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.

Perform operations using geographic information systems (GIS) and remote sensing software.
Organise, analyse and interpret geographic information using a range of techniques.
Effectively communicate the outputs of geographic analysis in both map and written formats.
Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assessment Tasks

Name	Weighting	Due
Assignment 1	5%	Week 3
Assignment 2	10%	Week 6
Assignment 3	17%	Week 8
Assignment 4	13%	Week 12
Quiz	10%	Weeks 6 and 13
Final Exam	45%	Check exam timetable

Assignment 1

Due: **Week 3**
Weighting: **5%**

Report on the week 2 – 3 practical exercises using the ESRI 'Virtual Campus'.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assignment 2

Due: **Week 6**
Weighting: **10%**

Report on GIS essay topic.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assignment 3

Due: **Week 8**
Weighting: **17%**

Report on the week 4 - 7 practical exercises on attribute tables, queries and geoprocessing.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.
- Organise, analyse and interpret geographic information using a range of techniques.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assignment 4

Due: **Week 12**
Weighting: **13%**

Report on the week 8 - 11 practical exercises on data capture, raster analysis and advanced mapping.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.

- Organise, analyse and interpret geographic information using a range of techniques.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Quiz

Due: **Weeks 6 and 13**
Weighting: **10%**

Two short quizzes on lecture topics.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.

Final Exam

Due: **Check exam timetable**
Weighting: **45%**

Final exam covering all aspects of the unit.

On successful completion you will be able to:

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Delivery and Resources

ENVG708 provides students with a comprehensive introduction to geospatial technologies, including geographic information systems (GIS), global positioning systems (GPS) and remote sensing. Students will learn core concepts and develop technical skills in data acquisition and management, mapping and spatial sampling and analysis. Students are provided training using the latest commercially available geospatial software.

ENVG708's lectures cover a range of topics to introduce you to geographic information science, including: coordinate systems and map projections, how to create your own digital data, spatial analysis with vector and raster data, cartography (map making), remote sensing and 3D analysis. The practical classes apply standard geographic information science concepts and

techniques to a range of disciplines, including environmental science and management, physical and human geography and urban planning.

Delivery

This unit is offered both internally and externally.

Lecture program and location

There is one 1 hour lecture per week. Please check lecture times and rooms at the Macquarie University timetables website (www.timetables.mq.edu.au). Lectures are recorded and posted to iLearn via Echo360. Internal students are expected to attend lectures *in person*; external students can access lectures through iLearn.

Practical program and location

Internal students: There is one 3 hour practical class per week. Please check practical times and rooms at the Macquarie University timetables website (www.timetables.mq.edu.au). Practical class sizes are limited by the number of available computers. You must use the online enrolment system to change the time/day of your practical class. Practicals begin in Week 2.

External students: You must have a home computer with a Windows 7 or 8, Vista or XP operating system (the ArcGIS software is NOT supported by Mac or Linux operating systems.). A copy of the ArcGIS software will be sent to all external students. You must install this software on your computer.

Workload

ENVG708 earns 4 credit points towards your degree. You are expected to invest at least 12 hours of study per week on average over the semester. This includes your lectures and practical exercises (4 hours per week), assignments and the final exam.

Submission of assignments

All students are required to keep a backup of the submitted version of their assessments.

Assignments should be in a MS Word or PDF file format. All maps and tables associated with the assignment must be incorporated in the MS Word document or PDF.

Students are not permitted to email their assignments or submit them in a softcopy format. Assignments are to be submitted via the Turnitin link provided in iLearn by 5PM on the date specified.

How do I request an extension?

Extensions must be requested by email from the unit convenor, Alana Grech (alana.grech@mq.edu.au), prior to the assignment's due date (except in exceptional circumstances), and supported by appropriate documentation (e.g. a medical certificate).

Extensions will only be granted in writing (by email) at the discretion of the unit convenor. Otherwise, automatic penalties will apply. Assignments that are handed in late without an extension or exceptional circumstances will not be marked if they are submitted more than 7 days after the due date. If submitted within 7 days, marks will be deducted for lateness at the

rate of 5% of the possible mark per day.

Return of marked assignments

Your assignments will be returned via iLearn within two teaching weeks of the submission, and will include written feedback.

Requirements to complete this unit satisfactory

1. Attend lecture and practical classes (internal students);

2. Complete all assignments and the final exam; and

3. Acquire a pass grade or above.

What has changed since 2014?

The unit has a new convenor, assignments 1, 2 and 4 are different from previous years, and some lectures are modified in both content and schedule of delivery.

Resources

Technology used

This unit will use Echo360 and iLearn, and ArcGIS, Google Earth, ENVI and MS Excel software, and GPS for the practical exercises.

You will require access to a computer and broadband internet to complete this unit. The library computers and computer labs are available for casual use outside scheduled practical classes.

Internal students who have a home computer with a Windows 7 or 8, Vista or XP operating system may obtain a copy of the ArcGIS software from the unit convenor. The ArcGIS software is NOT supported by Mac or Linux operating systems. It is not essential for internal students to have ArcGIS installed on their home computer as the computers in the computer labs are available for casual use outside scheduled practical classes. However, external students must have ArcGIS installed on their home computer.

Unit web page

This unit's webpage will be available on iLearn.

Information about how students can access iLearn can be found at: http://www.mq.edu.au/iLearn/student_info/index.htm

The iLearn page uses Macquarie University's standard interface and has links that provide access to lectures (as audio files through Echo360, and as downloadable PDF presentations), Turnitin, quizzes and practical instructions and data. Important announcements will be made through iLearn, so check the ENVG708 page regularly.

Information about how to access lecture recordings through the Echo360 EchoCenter page in iLearn can be found at: http://mq.edu.au/iLearn/student_info/lecture_recordings.htm

Required and recommended texts/materials

Chang, K. 2008. *Introduction to geographic information systems.* McGraw Hill, New York.

[Available at Macquarie University Library].

Unit Schedule

Week	Lecture Topic	Lecturer	Practical
1	Introduction to ENVG708	Grech	No practical
2	Getting started with GIS	Grech	ESRI Virtual Campus
3	Coordinate systems and map projections	Grech	ESRI Virtual Campus
4	Spatial analysis with vector data	Grech	Attribute tables and queries 1
5	How to make a map?	Grech	Attribute tables and queries 2
6	Online GIS	Grech	Geoprocessing 1
7	GIS applications and careers in GIS	Grech	Geoprocessing 2
8	Creating digital data	Grech	Data capture 1
9	Spatial analysis with raster data	Grech	Raster analysis
10	3D GIS	Chang	Data capture 2
11	Remote sensing 1	Chang	Advanced mapping
12	Remote sensing 2	Chang	Remote sensing
13	Unit overview	Grech	No practical

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

Assessment Policy http://mq.edu.au/policy/docs/assessment/policy.html

Grading Policy http://mq.edu.au/policy/docs/grading/policy.html

Grade Appeal Policy http://mq.edu.au/policy/docs/gradeappeal/policy.html

Grievance Management Policy http://mq.edu.au/policy/docs/grievance_management/policy.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special*

Consideration Policy.

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

Student Services and Support

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit http://informatics.mq.edu.au/help/.

When using the University's IT, you must adhere to the Acceptable Use Policy. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

PG - Capable of Professional and Personal Judgment and

Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

Learning outcomes

- Perform operations using geographic information systems (GIS) and remote sensing software.
- Organise, analyse and interpret geographic information using a range of techniques.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assessment tasks

- Assignment 3
- Assignment 4

PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.
- Organise, analyse and interpret geographic information using a range of techniques.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assessment tasks

- Assignment 1

- Assignment 2
- Assignment 3
- Assignment 4
- Quiz
- Final Exam

PG - Critical, Analytical and Integrative Thinking

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.
- Organise, analyse and interpret geographic information using a range of techniques.
- Effectively communicate the outputs of geographic analysis in both map and written formats.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assessment tasks

- Assignment 3
- Assignment 4
- Quiz
- Final Exam

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcomes

- Identify and define key concepts and principles of geographic information science, including scale, projections, interactions and interdependence.
- Perform operations using geographic information systems (GIS) and remote sensing software.
- Organise, analyse and interpret geographic information using a range of techniques.
- Identify and apply appropriate geographic information science concepts and techniques to a range of contexts.

Assessment tasks

- Assignment 2
- Assignment 3
- Assignment 4
- Final Exam

PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

Learning outcome

- Effectively communicate the outputs of geographic analysis in both map and written formats.

Assessment tasks

- Assignment 2
- Assignment 3
- Assignment 4
- Final Exam
