Credit points

3

Prerequisites

ELEC240(P) and (ELEC270(P) or ENGG270(P) or ELEC290(P)) and (MATH232(P) or MATH235(P))

Corequisites

Co-badged status

Unit description

This unit explores: Fourier theory, including frequency-time duality; analogue amplitude and frequency modulation; digital communication systems, including sampling, modulation and demodulation methods, source and line coding, multi-symbol signalling; noise and its effects including noise types and spectrum, information capacity, noise measures, noise performance of digital communication systems, error-control coding and decoding; and communication-system case studies.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

Understanding concepts involving the transmission of information from one location to another location

Understanding the roles of power and bandwidth in the efficient transmission of information

Ability to apply mathematical methods to the design and analysis of communication systems

Understanding the digital representation of information including time sampling and quantization

Ability to conduct laboratory experiments using advanced communication systems and equipment

## Assessment Tasks

Name	Weighting	Due
<a href="#"><u>Tutorial Questions</u></a>	5%	Every tutorial
<a href="#"><u>Laboratory Report 1</u></a>	5%	23 August 2015
<a href="#"><u>Laboratory Report 2</u></a>	5%	6 September 2015
<a href="#"><u>Laboratory Report 3</u></a>	3%	13 September 2015
<a href="#"><u>Laboratory Report 4</u></a>	5%	11 October 2015
<a href="#"><u>Laboratory Report 5</u></a>	5%	25 October 2015
<a href="#"><u>Laboratory Report 6</u></a>	2%	1 November 2015
<a href="#"><u>Assignment 1</u></a>	10%	6 September 2013
<a href="#"><u>Assignment 2</u></a>	10%	1 November 2013
<a href="#"><u>Final Examination</u></a>	50%	Final Examination

### Tutorial Questions

Due: **Every tutorial**

Weighting: **5%**

Written solutions of specific tutorial questions.

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization

## Laboratory Report 1

Due: **23 August 2015**

Weighting: **5%**

Report on Laboratory 1

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Laboratory Report 2

Due: **6 September 2015**

Weighting: **5%**

Report on Laboratory 2

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication

systems

- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Laboratory Report 3

Due: **13 September 2015**

Weighting: **3%**

Report on Laboratory 3

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Laboratory Report 4

Due: **11 October 2015**

Weighting: **5%**

Report on Laboratory 4

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Laboratory Report 5

Due: **25 October 2015**

Weighting: **5%**

Report on Laboratory 5

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Laboratory Report 6

Due: **1 November 2015**

Weighting: **2%**

Report on Laboratory 6

On successful completion you will be able to:

- Understanding the roles of power and bandwidth in the efficient transmission of information
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Assignment 1

Due: **6 September 2013**

Weighting: **10%**

Analogue Communications

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Assignment 2

Due: **1 November 2013**

Weighting: **10%**

Digital Communications

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Final Examination

Due: **Final Examination**

Weighting: **50%**

Final Examination covering Analogue Communications and Digital Communications

On successful completion you will be able to:

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information

- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization

## Delivery and Resources

There are 13 two hour lectures. The lectures will be presented in class and will be available for download using iLearn.

There are 12 tutorial sessions. Each tutorial session has a duration of one hour.

The tutorial problems will be available for download on iLearn. However, the solutions will be presented in Tutorial Class sessions.

There are three hour practical sessions for week 2 to 11. Laboratory notes are available for download on iLearn.

Matlab, TMS equipment, and laboratory test equipment are used in the practical sessions.

Each student must keep a bound notebook in which experiment details and results are recorded.

The laboratory notebook must be signed by the laboratory demonstrator at the end of the session.

For each practical topic, the student must produce a practical report as described in the laboratory notes which are available on iLearn.

For each visit to an external facility, the student must produce a trip report as described in the laboratory notes which are available on iLearn.

The subject content and delivery has not changed from previous years.

## Unit Schedule

Week 1	Introduction: Signals and Operations	
Week 2	Fourier Analysis	Laboratory Session 1
Week 3	Analogue Modulation-AM	Laboratory Session 2
Week 4	Analogue Modulation-FM	Laboratory Session 3
Week 5	Power Spectral Density & Random Processes	Laboratory Session 4
Week 6	Digitisation and Encoding	Laboratory Session 5
Week 7	Baseband Digital Transmission	Laboratory Session 6
Week 8	Digital Modulation Techniques	Laboratory Session 7
Week 9	Noise in Digital Communications	Laboratory Session 8

Week 10	Coding and Error Correction	Laboratory Session 9
Week 11	Multi-User Access;CDMA, OFDM	Laboratory Session 10
Week 12	Satellite Communications	
Week 13	Revision	

## Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy [http://mq.edu.au/policy/docs/academic\\_honesty/policy.html](http://mq.edu.au/policy/docs/academic_honesty/policy.html)

Assessment Policy <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Grievance Management Policy [http://mq.edu.au/policy/docs/grievance\\_management/policy.html](http://mq.edu.au/policy/docs/grievance_management/policy.html)

Disruption to Studies Policy [http://www.mq.edu.au/policy/docs/disruption\\_studies/policy.html](http://www.mq.edu.au/policy/docs/disruption_studies/policy.html) *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

## Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student\\_conduct/](https://students.mq.edu.au/support/student_conduct/)

## Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit [ask.mq.edu.au](http://ask.mq.edu.au).

## Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

## Learning Skills

Learning Skills ([mq.edu.au/learningskills](http://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)

- [Ask a Learning Adviser](#)

## Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

## Student Enquiries

For all student enquiries, visit Student Connect at [ask.mq.edu.au](http://ask.mq.edu.au)

## IT Help

For help with University computer systems and technology, visit <http://informatics.mq.edu.au/help/>.

When using the University's IT, you must adhere to the [Acceptable Use Policy](#). The policy applies to all who connect to the MQ network including students.

## Graduate Capabilities

### Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

### Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization

### Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4

- Laboratory Report 5
- Laboratory Report 6
- Assignment 1
- Assignment 2
- Final Examination

## Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

### Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

### Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Assignment 1
- Assignment 2
- Final Examination

## Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they

participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

## **Learning outcomes**

- Understanding concepts involving the transmission of information from one location to another location
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## **Assessment tasks**

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Assignment 1
- Assignment 2
- Final Examination

## **Discipline Specific Knowledge and Skills**

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

## **Learning outcomes**

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information

- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## **Assessment tasks**

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Laboratory Report 6
- Assignment 1
- Assignment 2
- Final Examination

## **Critical, Analytical and Integrative Thinking**

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

## **Learning outcomes**

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Laboratory Report 6
- Assignment 1
- Assignment 2
- Final Examination

## Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

## Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Understanding the digital representation of information including time sampling and quantization
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3

- Laboratory Report 4
- Laboratory Report 5
- Laboratory Report 6
- Assignment 1
- Assignment 2
- Final Examination

## Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

### Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information
- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

### Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Laboratory Report 6
- Assignment 1
- Assignment 2
- Final Examination

## Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

### Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Ability to conduct laboratory experiments using advanced communication systems and equipment

### Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Assignment 1
- Assignment 2
- Final Examination

## Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

### Learning outcomes

- Understanding concepts involving the transmission of information from one location to another location
- Understanding the roles of power and bandwidth in the efficient transmission of information

- Ability to apply mathematical methods to the design and analysis of communication systems
- Ability to conduct laboratory experiments using advanced communication systems and equipment

## **Assessment tasks**

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Laboratory Report 4
- Laboratory Report 5
- Assignment 1
- Assignment 2
- Final Examination

## **Satisfactory completion**

Satisfactory completion of all components of the unit is required to pass.

The components of the unit are (1) tutorial questions, (2) laboratory reports, (3) assignments, and (4) the final examination.
