Unit description

This unit introduces engineering principles and practices. It describes laws and theories in electronic engineering and their application to basic linear analogue circuits. Electrical circuit variables and circuit elements are introduced. Resistive circuits are analysed by applying a range of circuit theorems and analysis methods. Energy storage elements and operational amplifiers are introduced. Engineering practices, including record keeping, documenting and searching for information, are emphasised and practised in workshops and laboratory sessions.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Review of basic mathematics and physics knowledge required for this unit.

Ability to understand the concept of force transfer and analyse forces in members of machines and structures.

Ability to analyse electronic circuits.

Ability to understand the commonality between problems in Mechanical and Electronic engineering and how they can be related in engineering systems.

Demonstrate self-learning, time-management, and project management.

General Assessment Information

ENGG150 teaches fundamental knowledge in Mechanical and Electronics engineering which is important for students to undertake advanced engineering subjects in their second year of studies onward. Students need to pass both the Mechanical and Electronics sections in ENGG150 in order to pass this unit.

All students must demonstrate i) satisfactory achievements of all learning outcomes, ii) satisfactory performance in final exam and iii) satisfactory performance of all assessment tasks.

Assessment Tasks

Name	Weighting	Due
<u>Final examination</u>	40%	TBA
<u>Assignment</u>	20%	Week 7 and Week 12
<u>Participation and Logging</u>	15%	Everyweek
<u>Online quiz</u>	25%	Week 2, week 7 and week 12

Final examination

Due: **TBA**

Weighting: **40%**

Demonstrate knowledge on lecture and lab/practical/tutorial material. 3 hour, closed book.

On successful completion you will be able to:

- Ability to understand the concept of force transfer and analyse forces in members of machines and structures.
- Ability to analyse electronic circuits.
- Ability to understand the commonality between problems in Mechanical and Electronic engineering and how they can be related in engineering systems.

Assignment

Due: **Week 7 and Week 12**

Weighting: **20%**

There will be two assignments and each assignment is worth 10%. The first assignment will consist of Mechanical Engineering related problems and the second assignment will consist of Electronics Engineering related problems.

Assignment 1 is due the Friday of week 7 at 5pm and assignment 2 is due the Friday of week 12 at 5pm. All assignments must be submitted online as PDF documents using ILEARN. Untidy assignments and assignments with no cover sheet will not be marked.

In the event that an assessment task is submitted late, the following penalties will apply; 0 to 24 hours -25%, 24 hours to 48 hours -50%, greater than 48 hours will result in no mark being awarded.

On successful completion you will be able to:

- Ability to understand the concept of force transfer and analyse forces in members of machines and structures.
- Ability to analyse electronic circuits.
- Ability to understand the commonality between problems in Mechanical and Electronic engineering and how they can be related in engineering systems.

Participation and Logging

Due: **Everyweek**

Weighting: **15%**

Tutorial and laboratory attendance is compulsory at the enrolled tutorial time. Students who wish to change the tutorial time after the session commences may only do so with the written permission of the unit convener.

Attendance will only be given to students who attempt 2 of 6 of the tutorial questions before they attend the tutorial. Students with tutorial attendance less than 65% may not be allowed to sit for the final examination.

Each student must have a bound notebook to be used as a laboratory/tutorial log (A4 size preferred, graph pages are not required). This logbook should also be used for any preliminary work. It should contain all results recorded during these sessions and student's detail comments on how a problem can be solved. On the completion of each session, log book entries must be signed and dated by a tutor. At the end of the semester the logbooks will be collected and marked to note the degree of importance of the recording of pertinent information.

Food and drink are not permitted in the laboratory. Students will not be permitted to enter the laboratory without appropriate footwear. Thongs and sandals are not acceptable.

On successful completion you will be able to:

- Demonstrate self-learning, time-management, and project management.

Online quiz

Due: **Week 2, week 7 and week 12**

Weighting: **25%**

There will be three online quizzes. The first online quiz is worth 5% and the second and third online quizzes are worth 10% each.

Students are required to take part in the online quizzes on Ilearn. Only a specific time duration is allowed for the online quizzes and online quizzes will be held during the lecture hours. All students are required to ensure that they have their own resources (Computers/online access) to take part in the quiz.

On successful completion you will be able to:

- Review of basic mathematics and physics knowledge required for this unit.
- Ability to understand the concept of force transfer and analyse forces in members of machines and structures.
- Ability to analyse electronic circuits.

Delivery and Resources

Text books

1. JL Meriam and LG Kraige, "Engineering Mechanics (volume 1), Statics."
2. Dorf & Svoboda, "Introduction to Electric Circuits (9th Edition)."

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

Assessment Policy <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Grievance Management Policy http://mq.edu.au/policy/docs/grievance_management/policy.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit <http://informatics.mq.edu.au/help/>.

When using the University's IT, you must adhere to the [Acceptable Use Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcome

- Ability to understand the commonality between problems in Mechanical and Electronic engineering and how they can be related in engineering systems.

Assessment task

- Assignment

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcome

- Demonstrate self-learning, time-management, and project management.

Assessment task

- Participation and Logging

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcome

- Demonstrate self-learning, time-management, and project management.

Assessment task

- Participation and Logging

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able

to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcome

- Review of basic mathematics and physics knowledge required for this unit.

Assessment task

- Online quiz

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Ability to understand the concept of force transfer and analyse forces in members of machines and structures.
- Ability to analyse electronic circuits.

Assessment tasks

- Final examination
- Assignment
- Online quiz

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Ability to understand the concept of force transfer and analyse forces in members of machines and structures.
- Ability to analyse electronic circuits.

- Ability to understand the commonality between problems in Mechanical and Electronic engineering and how they can be related in engineering systems.

Assessment tasks

- Final examination
- Assignment

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Assessment task

- Assignment
