Unit description

This unit will focus on special topics in geophysics. Topics can range from shallow geophysical, to deep geophysical to global geophysics. Topics will be chosen to give students the basic tools of analysis that are required to undertake more advanced research.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.

Acquire a basic understanding of computer programming (MATLAB) for solving differential equations, linear systems, and tensorial algebra relevant to Geophysics problems

Understand the fundamental principles of geophysical data analysis, modelling and

inversion

Capacity to summarize relevant information for specific geophysical problems and formulating adequate solutions for them.

Assessment Tasks

Name	Weighting	Due
<u>Exam</u>	25%	June
<u>Assignments I</u>	25%	end of March
<u>Assignments II</u>	25%	End of April
<u>Assignments III</u>	25%	end of May

Exam

Due: **June**

Weighting: **25%**

Final exam/report on theory

On successful completion you will be able to:

- Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.
- Understand the fundamental principles of geophysical data analysis, modelling and inversion

Assignments I

Due: **end of March**

Weighting: **25%**

Seismic propagation I. This assignment will consist of a written report (2000-4000 words) on theory and methods. The specific topic covered in the report needs to be discussed in advanced with Dr Y. Yang.

On successful completion you will be able to:

- Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.
- Acquire a basic understanding of computer programming (MATLAB) for solving differential equations, linear systems, and tensorial algebra relevant to Geophysics problems

- Understand the fundamental principles of geophysical data analysis, modelling and inversion

Assignments II

Due: **End of April**

Weighting: **25%**

Seismic propagation II. This assignment will consist of a written report (2000-4000 words) on theory and methods. The specific topic covered in the report needs to be discussed in advanced with Dr Y. Yang.

On successful completion you will be able to:

- Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.
- Acquire a basic understanding of computer programming (MATLAB) for solving differential equations, linear systems, and tensorial algebra relevant to Geophysics problems
- Understand the fundamental principles of geophysical data analysis, modelling and inversion
- Capacity to summarize relevant information for specific geophysical problems and formulating adequate solutions for them.

Assignments III

Due: **end of May**

Weighting: **25%**

Inverse theory. This assignment will consist of a written report (2000-4000 words) on the theory and applications of linearized and probabilistic inversion theory. The specific topics covered in the report need to be discussed in advanced with Dr. J. C. Afonso

On successful completion you will be able to:

- Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.
- Acquire a basic understanding of computer programming (MATLAB) for solving differential equations, linear systems, and tensorial algebra relevant to Geophysics problems
- Understand the fundamental principles of geophysical data analysis, modelling and inversion
- Capacity to summarize relevant information for specific geophysical problems and

formulating adequate solutions for them.

Delivery and Resources

Video lectures + practicals or Lectures/practical, depending on the number of studentes enrolled.

One laptop/desktop per student will be provided by the Department of Earth and Planetary Sciences

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

Assessment Policy <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Grievance Management Policy http://mq.edu.au/policy/docs/grievance_management/policy.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)

- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit <http://informatics.mq.edu.au/help/>.

When using the University's IT, you must adhere to the [Acceptable Use Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

PG - Capable of Professional and Personal Judgment and Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

Learning outcome

- Understand the fundamental principles of geophysical data analysis, modelling and inversion

PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes

- Acquire a basic, coherent knowledge of the fundamental principles and concepts governing the propagation of seismic waves, inverse theory, and heat transfer.
- Acquire a basic understanding of computer programming (MATLAB) for solving

differential equations, linear systems, and tensorial algebra relevant to Geophysics problems

Assessment tasks

- Exam
- Assignments I
- Assignments II
- Assignments III

PG - Critical, Analytical and Integrative Thinking

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Understand the fundamental principles of geophysical data analysis, modelling and inversion
- Capacity to summarize relevant information for specific geophysical problems and formulating adequate solutions for them.

Assessment tasks

- Exam
- Assignments I
- Assignments II
- Assignments III

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcomes

- Acquire a basic understanding of computer programming (MATLAB) for solving differential equations, linear systems, and tensorial algebra relevant to Geophysics

problems

- Understand the fundamental principles of geophysical data analysis, modelling and inversion
- Capacity to summarize relevant information for specific geophysical problems and formulating adequate solutions for them.

Assessment tasks

- Assignments I
- Assignments II
- Assignments III

PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

Learning outcomes

- Understand the fundamental principles of geophysical data analysis, modelling and inversion
- Capacity to summarize relevant information for specific geophysical problems and formulating adequate solutions for them.

Assessment tasks

- Exam
- Assignments I
- Assignments II
- Assignments III

PG - Engaged and Responsible, Active and Ethical Citizens

Our postgraduates will be ethically aware and capable of confident transformative action in relation to their professional responsibilities and the wider community. They will have a sense of connectedness with others and country and have a sense of mutual obligation. They will be able to appreciate the impact of their professional roles for social justice and inclusion related to national and global issues

This graduate capability is supported by:

Assessment task

- Assignments II
