Prerequisites
PHTY800 and PHTY801 and PHTY802 and PHTY803

Corequisites
PHTY804 and PHTY805

Co-badged status

Unit description
This is the second of two units on the development of knowledge, skills and attributes required by physiotherapists to assess and treat clients of all ages with disorders of the musculoskeletal system. The focus of this unit is on common musculoskeletal conditions of peripheral joints in the upper and lower limbs. This unit builds on knowledge and skill attained in session 1 and integrates with the concurrent unit PHTY804 Evidence-based Health care. Students will develop the ability to select and implement interventions based on clinical reasoning, principles of evidence-based practice and safety in preparation for clinical placements next session.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at http://students.mq.edu.au/student_admin/enrolmentguide/academicdates/
Learning Outcomes

1. Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.

2. Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.

3. Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.

4. Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.

5. Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers

6. Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.

7. Demonstrate competency in performing technical skills for both assessment and treatment

General Assessment Information

Grade descriptors and other information concerning grading are contained in the Macquarie University Grading Policy, which is available at: http://www.mq.edu.au/policy/docs/grading/policy.html

To pass this unit, students must demonstrate sufficient evidence of achievement of the learning outcomes.

Further details for each assessment task will be available on iLearn including marking rubrics.

All final grades in the Department of Health Professions are determined by a grading committee and are not the sole responsibility of the Unit Convener.

Students will be awarded one of these grades plus a Standardised Numerical Grade (SNG). The SNG is not necessarily a summation of the individual assessment components. The final grade and SNG that are awarded reflect the corresponding grade descriptor in the Grading Policy.

Extension for Assessment Tasks
Applications for assessment task extensions must be submitted via www.ask.mq.edu.au. For further details please refer to the Disruption to Studies Policy available at http://mq.edu.au/policy/docs/disruption-studies/policy.html

**Late Submission of Work**

All assignments which are officially received after the due date, and where no extension has been granted by the course convener or tutor, will incur a deduction of 10% for the first day, and 10% for each subsequent day including the actual day on which the work is received. Weekends and public holidays are included. For example:

<table>
<thead>
<tr>
<th>Due Date</th>
<th>Received</th>

<td>40%</td>
<td>End semester exam period</td>
</tr>
</tbody>
</table>

**Mastery of Clinical Skills**

Due: **Due Week 13**

Weighting: **10%**

There will be ten critical practical skills that each student needs to demonstrate proficiency in by the end of semester. It is the student's responsibility to ask their tutor to assess their skill performance and record when the required level of proficiency has been attained.

This Assessment Task relates to the following Learning Outcomes:

- Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
- Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.
• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
• Demonstrate competency in performing technical skills for both assessment and treatment

Clinical Simulation Exam 1
Due: Week 7
Weighting: 20%
Students will simulate physiotherapy management of a peripheral musculoskeletal condition of the upper limb, with a student colleague who will simulate the patient.

This Assessment Task relates to the following Learning Outcomes:
• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.
• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
• Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.
• Demonstrate competency in performing technical skills for both assessment and treatment

Clinical Simulation Exam 2
Due: End Semester Exam Period
Weighting: 30%
Students will simulate physiotherapy management of a peripheral musculoskeletal condition of the lower limb, with a student colleague who will simulate the patient.
This Assessment Task relates to the following Learning Outcomes:

• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.
• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers.
• Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.
• Demonstrate competency in performing technical skills for both assessment and treatment.

Written Examination

Due: End semester exam period
Weighting: 40%

This written examination will cover all content from this unit.

This Assessment Task relates to the following Learning Outcomes:

• Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis.
and to select a treatment with consideration of the individual’s preferences and expectations.

- Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
- Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.
- Demonstrate competency in performing technical skills for both assessment and treatment

**Delivery and Resources**

**Technology and Equipment**

Teaching rooms are equipped with state of the art audio-visual and ICT equipment, including:

- Laptops (1 per student pair)
- iPads
- Wireless internet connection
- High quality video cameras
- Multiple LCD screens

Videos of assessment and treatment techniques have been prepared by the teaching team and will be available on iLearn.

**Textbooks:** It is recommended that you purchase the following textbook for this unit: Brukner & Kahn "Clinical Sports Medicine", 4th Edition. Copies are available in the MQ library and in the Co-op bookshop.

Other books that may be useful references for this unit are:

**Consultation with Staff**

All staff will be available for individual consultation. See iLearn for contact details and times

**Teaching and Learning Strategy**

**Lectures** will provide foundation knowledge and also incorporate large group discussions and demonstrations.
**Tutorials** will focus on the development of technical skills and clinical reasoning. Tutorial content will be based on case studies and situated in authentic learning environments to optimally prepare students for their clinical placements the following semester.

**iLearn:** This unit's iLearn site will provide weekly resources for students, including:

- lecture notes
- tutorial worksheets
- preparation and consolidation material
- videos
- other teaching resources
- assessment details

**Policies and Procedures**

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

**Results**

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

**Student Support**

Macquarie University provides a range of support services for students. For details, visit [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)
Learning Skills
Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

Student Enquiry Service
For all student enquiries, visit Student Connect at ask.mq.edu.au

Equity Support
Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help
For help with University computer systems and technology, visit http://informatics.mq.edu.au/help/.

When using the University’s IT, you must adhere to the Acceptable Use Policy. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities
PG - Critical, Analytical and Integrative Thinking
Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
- Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.
• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers.
• Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.

Assessment tasks

• Mastery of Clinical Skills
• Clinical Simulation Exam 1
• Clinical Simulation Exam 2
• Written Examination

PG - Capable of Professional and Personal Judgment and Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

Learning outcomes

• Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis.
and to select a treatment with consideration of the individual’s preferences and expectations.

- Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
- Demonstrate competency in performing technical skills for both assessment and treatment

**Assessment tasks**

- Clinical Simulation Exam 1
- Clinical Simulation Exam 2
- Written Examination

**PG - Discipline Knowledge and Skills**

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

**Learning outcomes**

- Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
- Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
- Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
- Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
- Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.
- Demonstrate competency in performing technical skills for both assessment and treatment
Assessment tasks

- Mastery of Clinical Skills
- Clinical Simulation Exam 1
- Clinical Simulation Exam 2
- Written Examination

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcomes

- Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
- Analyse assessment findings to form a diagnosis and a prioritised list of problems in impairments, activity limitations and participation restrictions.
- Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers
- Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.

Assessment task

- Written Examination

PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:
Learning outcomes

• Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.
• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.
• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.
• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers.
• Develop a person-centred physiotherapy plan that addresses the individual’s goals, utilises evidence-based treatment and is evaluated using appropriate outcome measures.
• Demonstrate competency in performing technical skills for both assessment and treatment.

Assessment tasks

• Mastery of Clinical Skills
• Clinical Simulation Exam 1
• Clinical Simulation Exam 2
• Written Examination

PG - Engaged and Responsible, Active and Ethical Citizens

Our postgraduates will be ethically aware and capable of confident transformative action in relation to their professional responsibilities and the wider community. They will have a sense of connectedness with others and country and have a sense of mutual obligation. They will be able to appreciate the impact of their professional roles for social justice and inclusion related to national and global issues.

This graduate capability is supported by:
Learning outcomes

• Describe common musculoskeletal conditions of the upper limb and lower limb and understand the principles of surgical interventions and physiotherapy treatment of these conditions in primary care.

• Plan and conduct an assessment of people with musculoskeletal disorders of the upper and lower limbs including a comprehensive history and physical examination and screening for predictors of persistent pain and disability.

• Demonstrate competency in communicating with people with disorders of the upper limb and lower limb to provide appropriate information about their diagnosis and prognosis and to select a treatment with consideration of the individual’s preferences and expectations.

• Describe the efficacy of physiotherapy treatments for musculoskeletal conditions of the upper limb and lower limb based on current evidence and demonstrate competence in implementing these treatments with peers.

Changes from Previous Offering

Feedback regarding this unit in 2014 was overwhelming positive. Changes made are that additional case scenarios have been written for assessment and treatment of the lower limb.
