Admission to MEnv or GradDipEnv or GradCertEnv or MSusDev or GradDipSusDev or GradCertSusDev

Corequisites

Co-badged status
This unit is co-badged with ENVE117 Special Topic in Environment A: Biophysical Environments

Unit description
This unit is for students from non-cognate disciplines interested in pursuing postgraduate research in environment. These units introduce students to core environmental concepts and topics. This unit uses the local area as a laboratory to explore a combination of theory, field and modelling skills, including Geographic Information Systems (GIS), to understand the biophysical environment. The unit is accessible for students with a broad range of backgrounds and develops foundational knowledge and skills relating to environment and sustainability in order to facilitate higher-level studies.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at http://students.mq.edu.au/student_admin/enrolmentguide/academicdates/

Learning Outcomes
1. To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
2. To appraise how Humans have modified the Biophysical Environment
3. To understand the basics of Spatial Information Science
4. To develop skills in field data collection and analysis
5. To demonstrate scientific method in writing and critique of literature
6. Develop an introductory understanding of climate science for non-cognate students
7. Ability to apply climate science knowledge to existing issues

Assessment Tasks

<tr>
<td>Final Exam</td>
<td>45%</td>
<td>TBA</td>
</tr>
</tbody>
</table>

Assignment 1
Due: **Friday 13th March**
Weighting: **15%**

Using the skills you have developed in Practical 1 and your independent study, this assignment tests your skills in:
1) finding information on the library website,
2) undertaking short writing exercises,
3) reviewing the structure of a scientific paper and
4) analysing scientific data.

The assignment will be posted on ENVE117/ENVG602 website for download.

This Assessment Task relates to the following Learning Outcomes:
- To demonstrate scientific method in writing and critique of literature

Assignment 2
Due: **Monday 20th April**
Weighting: **20%**

This assignment tests your ability to design a research project, collect data, analyse data, write a scientific report and use appropriate literature on a topic related to the Water module. Assignment 2 will be posted on ENVE117/ENVG602 website and notified in Lectures and on the General Discussion Forum of ENVE117/ENVG602.

This Assessment Task relates to the following Learning Outcomes:
Unit guide ENVG602 Special Topic in Environment A: Biophysical Environments

- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature

Assignment 3
Due: Friday 29th May
Weighting: 20%

This assignment will test your ability to retain and learn information from the Air module lectures as well as your ability to write a concise summary on a climate-related topic. ENVG602 students will need to write a longer assignment than ENVE117 students, and the assignment will be worth more (20% for ENVG602 vs 15% for ENVE117 students). Details of Assignment 3 will be posted on the ENVE117/ENVG602 website and notified in Lectures.

This Assessment Task relates to the following Learning Outcomes:
- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

Final Exam
Due: TBA
Weighting: 45%

The final exam will be two hours and covers all material in the lectures and practical classes. The final exam is worth 45% for ENVG602 students (rather than 50% as it is for ENVE117 students).

This Assessment Task relates to the following Learning Outcomes:
- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To understand the basics of Spatial Information Science
- To demonstrate scientific method in writing and critique of literature
• Develop an introductory understanding of climate science for non-cognate students
• Ability to apply climate science knowledge to existing issues

Delivery and Resources

CLASSES

Delivery:
Day, External

Organisation of the unit

Following 2 introductory lectures, there are three broad modules:

• Module 1 Weeks 2 - 5 Water
• Module 2 Weeks 5 - 8 Geocology
• Module 3 Weeks 8 - 11 Air

and we will finish up with two weeks of Spatial Information Science, synthesis and review.

Internal students: A summary of what you have to do

There are two lectures each week. You also need to enroll for a specific practical class. The University expects that you devote at least 9 hours per week, in total, to a 3 credit point unit like ENVE117/ENVG602.

Lectures

There are TWO lectures each week.

Illustrative and audio material from the lectures are available from the ENVE117/ENVG602 website: https://ilearn mq.edu.au

Weekly Practicals

Each week, beginning Week 2, you’ll be expected to complete a practical. These 2-hour “hands-on” classes will be in the computer laboratory or in the field. LOOK TO THE ENVE117/ENVG602 UNIT DIARY TO FIND OUT WHERE EACH WEEK’S PRACTICAL IS LOCATED. The practicals are compulsory and are designed to help you work towards the assessable assignments, to allow you to build on lectures, reading and other material, and to develop some valuable generic and discipline-specific skills.

External students: A summary of what you have to do

You must listen to two iLectures that will be recorded and made available each week (click on the Echo360 icon on the right of the ENVE117/ENVG602 iLearn page). To get the most out of them you’re advised to look at the online lecture slides while listening.

External students must be able to access the Internet in order to view and listen to the lectures. Skill in using the internet is an important generic skill that all students completing ENVE117/ENVG602 will develop general competence in. If you do not have internet access from
home or work, most local libraries have access, and of course there is always access on-campus.

In addition you must attend (compulsory) two on-campus sessions on Sunday 15th March and Sunday 24th May.

Information and an itinerary will be released closer to the date on the iLearn discussion page for this unit. On-campus sessions tend to run from 8:30am to 5:00pm. On both days you are going to spend some time outdoors in the field, so ensure you have sturdy footwear (no sandals or thongs), sunscreen, a hat and a rainjacket. Lunch and snacks for both days are your own responsibility. There is often no food outlets available on-campus on Sundays.

These are the only occasions we’ll meet face-to-face, so you need to be fully prepared in order to obtain the maximum benefit. In the weeks prior to the on-campus sessions, listen to all the lectures available and do any recommended reading. You’re encouraged to look at the online practicals before you come on-campus but these will be addressed more thoroughly during those face-to-face sessions. It should be obvious that if you try to start the unit on Sunday 15th March (without reading and listening to the lectures beforehand), your final grade will suffer. The unit starts in Week One of Semester One, and as it is a 3 credit point unit, you should spend an average of 9 hours per week on it (listening to lectures, reading, pracs, on-campus sessions, assignments, exam preparations etc.).

REQUIRED AND RECOMMENDED TEXTS AND/OR MATERIALS

Recommended reading for this unit There is no set textbook for this unit, but there is a recommended book that is available in the library or good online book sellers:

Other recommended readings for each module are noted on the ENVE117/ENVG602 website for each module.

UNIT WEBPAGE AND TECHNOLOGY USED AND REQUIRED

This unit will use:

iLearn, Echo360

Computer based learning: iLearn instructions

There are essential computer-based components in ENVE117/ENVG602. These include lectures recorded digitally as mp3 files (in Echo360), many of the weekly practical exercises and an electronic “Discussions” system for communicating with staff and other students in this unit. You can undertake this work from the Computer Labs (when not booked for classes) or in the library, from selected computers in the Library or from offcampus via the Internet.
If you’re unsure of how to connect to the internet or use the computer system, help can be obtained at: http://students.mq.edu.au/support/.

**How To Use The ENVE117/ENVG602 Unit website**

Once your browser is open, go to the menu bar at the top of the screen click in the address bar and type in the address https://ilearn.mq.edu.au/login To log in you will need your MQID which was mailed to you after you enrolled.

Once your identity has been established, you may be presented with a list of all the Online units you have access to. Click on ENVE117 to enter the unit. The ENVE117 homepage will be used for both ENVE117 and ENVG602.

**Once You Have Reached the ENVE117/ENVG602 Home Page**

All the material used in ENVE117/ENVG602 will be presented via the web site. For those familiar with the internet, finding your way through the ENVE117/ENVG602 material will be straightforward. For others, once you get the hang of it, it should not be too difficult.

Experiment a while: you won’t damage anything!

Please note that at the beginning of semester our rolls are often incomplete (due to late transfers and changes of enrolment). In the first week of semester, if your name is missing from the enrolment list, you will be refused access to the system. Try a couple of times, to make sure you have not made a typing error (remember your username and password are CaSe SeNsItIvE). If later in the semester you suddenly find that your access to the ENVE117/ENVG602 web site has been mysteriously barred, it is probably because your Student Services Fee has not been paid (this is imposed by the University Administration, not the ENVE117/ENVG602 staff).

**General Discussion Forum**

The "General Discussion Forum" link on the unit's homepage is a communication system between you and the rest of the class (a bit like an electronic tutorial or bulletin board). In ENVE117/ENVG602, we use it to discuss important issues and to resolve problems. It is compulsory that you read every posting to the discussion facility because important administration and academic information will be transacted there and only there - it is your responsibility to stay up-to-date. This is particularly important for External students.

**ASSIGNMENTS & GRADING**

**Penalties for late assignments**

Assignments must be completed and submitted, on time and in full, in order to receive credit. **Penalties for late assignments** will be a minimum of 10% per day or part thereof, beginning at the scheduled submission time.

**These deadlines and penalties will be imposed. Allowing some students to hand in assignments late is unfair to those who meet the deadlines.**
The deadlines for assignments are not negotiable. Only a medical certificate or a letter with appropriate supporting documents outlining other serious, extenuating circumstances can be used to submit an assignment after the due date without penalty. Vague medical certificates are unconvincing – they must indicate how the illness impacted your ability to perform the assignment on time. Work commitments are not accepted under any circumstance. You are required to manage your time effectively. If you have commitments that take you away from study you must plan for this in advance as part of an effective individual study plan.

Assignment submission

You must complete all three assignments in order to be to complete the unit successfully. Please note that you are required to keep a backup copy of the final version of your assignment.

All assignments must be submitted to the appropriate assignment link in iLearn. Please note ALL ASSIGNMENTS ARE TO BE SUBMITTED ONLINE. This means no cover sheets, no need to come in to uni to submit your assignment, etc. Detailed information about how to submit your assignment through Turnitin within iLearn will be posted on the unit home page and the General Discussion Forum.

All assignments are to be submitted by midnight on the date specified and will be electronically time stamped.

External Students must also submit all assignments through iLearn, following the same protocols as outlined above for internal students.

Extension requests

Permission for extension must be sought from the lecturer responsible for that assignment well before the due date unless this is absolutely impossible. No extensions are given within 3 working days of the assignment due date. Requests in the days immediately prior to or on the due date will not be accepted. Let us know of problems in advance or as soon as possible, not after the event: we are likely to be much more sympathetic and flexible in our requirements if you follow this advice. Formal requests should be made through the special consideration process (see below).

Returning Assessment Tasks

We will endeavour to return your assignments within three teaching weeks of the submission date. However, please keep in mind that that this is a large class and so it can take substantial time to mark assignments. Scientific reports can take up to 30 minutes each to mark. This means for a class of 160, 48 hours is spent marking your assignments. Lecturers have multiple classes and research commitments in any given semester, so please be patient.

Assignments will be returned through iLearn, and an announcement posted so that you know when the marking has been completed. Detailed instructions on how to access your grades and feedback will be posted on the General Discussion Forum.

Examination conditions
The University Examination period for First Half Year units is in June each year. You are expected to be at the examination at the time and place designated in the University Examination Timetable. The timetable will be available in Draft form approximately eight weeks before the commencement of the examinations and in Final form approximately four weeks before the commencement of the examinations - see http://www.timetables.mq.edu.au/exam. The only exception to not sitting an examination at the designated time is because of documented illness or unavoidable disruption. **Work and travel are NOT grounds for special consideration. DO NOT book holidays during the exam period** as you will not be allowed to take the exam at another time and you will be given a Fail grade.

For unavoidable disruption, you should apply for Special Consideration. If a Supplementary Examination is granted as a result of the Special Consideration process the examination will be scheduled **after the conclusion** of the official examination period. Note that it is Macquarie **University policy not to set early examinations** - all students are expected to ensure that they are available until the final day of the official examination period (26th June 2015). You are required to download your room and seat number from this website before the exam. You will be required to show your student ID on entering the exam room, so don’t forget it! No mobile phones or bags are permitted in the exam room.

**WHAT IS REQUIRED TO COMPLETE THIS UNIT SATISFACTORILY?**

**ENVE117/ENVG602 Attendance requirements**

You are required to submit all pieces of assessment, sit the final exam and attend all practical sessions to receive a Passing grade for this unit. Rolls are taken at the beginning of each practical class.

**Workload requirements and course rubric**

Workload for units at Macquarie University is based on a minimum of 3 hours per credit point per week to receive a Pass grade (including 2 x weeks in mid-semester break). For ENVE117/ENVG602 this means you are expected to work at least 9 hours per week on this course to receive a Pass grade. Obviously this is dependent on the speed at which you learn and your ability to study effectively. You may find you need to spend extra time on different parts of the course content. Depending on when assignments are due, this workload will be spread over the semester. **It is critical that you manage your time effectively throughout the semester and around other courses and commitments you may have.** A guide of hours required to receive a Pass grade is outlined below. However, keep in mind, grades are awarded on a demonstration of understanding and ability, not on effort!

In ENVE117/ENVG602 we expect quality in your assignments and a level of knowledge and comprehension of course content that sets the foundations for further study in Environmental Science (at 200-level and beyond). Grades for each assessment task and the unit as a whole will be awarded according to the following general criteria (course rubric):

<table>
<thead>
<tr>
<th>General description of the level of attainment</th>
<th>Developing</th>
<th>Functional</th>
<th>Proficient</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>Has not yet reached the desired standard. A Fail grade (or under some circumstances a Conceded Pass) would be given.</td>
<td></td>
<td></td>

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

### Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct:  [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

### Results

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit  [ask.mq.edu.au](http://ask.mq.edu.au).

### Student Support

Macquarie University provides a range of support services for students. For details, visit  [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)
Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- **Workshops**
- **StudyWise**
- **Academic Integrity Module for Students**
- **Ask a Learning Adviser**

Student Enquiry Service

For all student enquiries, visit Student Connect at [ask.mq.edu.au](http://ask.mq.edu.au)

Equity Support

Students with a disability are encouraged to contact the **Disability Service** who can provide appropriate help with any issues that arise during their studies.

IT Help

When using the University’s IT, you must adhere to the **Acceptable Use Policy**. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

**Learning outcomes**

- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To understand the basics of Spatial Information Science
- To develop skills in field data collection and analysis
Unit guide ENVG602 Special Topic in Environment A: Biophysical Environments

- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

Assessment tasks
- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes
- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth's Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To understand the basics of Spatial Information Science
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

Assessment tasks
- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in
order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

**Learning outcomes**

- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- To understand the basics of Spatial Information Science
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**

- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam

**Creative and Innovative**

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

**Learning outcomes**

- To appraise how Humans have modified the Biophysical Environment
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**

- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam
Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

**Learning outcomes**
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**
- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

**Learning outcomes**
- To appraise how Humans have modified the Biophysical Environment
- To demonstrate scientific method in writing and critique of literature
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**
- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam
Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

**Learning outcomes**

- To assess some complex interactions between the atmosphere, land surface, water movement and life (flora and fauna) in sustaining the Earth’s Biophysical Environment
- To appraise how Humans have modified the Biophysical Environment
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**

- Assignment 2
- Assignment 3
- Final Exam

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

**Learning outcomes**

- To appraise how Humans have modified the Biophysical Environment
- To understand the basics of Spatial Information Science
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**

- Assignment 1
- Assignment 2
Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

**Learning outcomes**

- To understand the basics of Spatial Information Science
- To develop skills in field data collection and analysis
- To demonstrate scientific method in writing and critique of literature
- Develop an introductory understanding of climate science for non-cognate students
- Ability to apply climate science knowledge to existing issues

**Assessment tasks**

- Assignment 1
- Assignment 2
- Assignment 3
- Final Exam

**Unit specific graduate capabilities**

Unit guide ENVG602 Special Topic in Environment A: Biophysical Environments

http://unitguides.mq.edu.au/unit_offerings/49510/unit_guide/print
### 1. A student who has **Discipline Specific Knowledge and Skills**
- Identifies key terms and describe aspects of the water, air and geocological systems of the Sydney region.
- Constructs a critical evaluation of current scientific knowledge on how water, air and geocology operate within the biophysical environment.
- Highlights and suggest explanations for impacts of humans on the biophysical environment.
- Prepares, analyses and adequately describes scientific data that is collected in the field.
- Understands the basics of Spatial Information Science.

### 2. A student who has **Critical, Analytical and Integrative Thinking**
- Develops an understanding of scientific method.
- Competently accesses, uses, critiques and synthesises scientific literature.
- Uses appropriate techniques to present scientific data in assignments.
- Applies geo-scientific principles to understanding the world and makes recommendations on how the environment can be better managed.
- Competently uses information technology applications for analyzing spatial information.
- Interprets empirical data to assess biophysical issues.

### 3. A student who has **Problem Solving and Research Capability**
- Carries out accurate field data collection and procedures within groups.
- Applies knowledge of the biophysical environment to assess environmental problems.
- Describes and interprets maps, databases, graphs and tables.
- Analyses data using appropriate graphical and numerical techniques.
- Draws conclusions from the results of data analysis, while recognizing limitations of data sets.
- Draws connections across water, air, geocology and spatial information fields of knowledge in the biophysical environment.
4. A student who is **Creative and Innovative**  
- Develops means of presenting and synthesizing data in a creative way.  
- Generates alternative options and innovative solutions to environmental problems.  
- Constructs cohesive arguments on biophysical science and issues.  
- Considers problems of water use, climate change and geoeccological interactions from new perspectives.

5. A student who has **Effective Communication**  
- Demonstrates scientific report writing skills.  
- Has a clear writing style with correct grammar and spelling.  
- Uses technical and discipline-specific language and terms.  
- Demonstrates scientific citation and referencing skills.  
- Presents data in a range of numerical, graphical and map formats.  
- Presents ideas clearly with supporting evidence from the literature.  
- Engages in online and verbal communication with peers on issues in the biophysical environment.

6. A student who is an **Engaged and Ethical Local and Global citizen**  
- Engages in issues of environmental degradation and sustainability.  
- Engages in scientifically honest use of group data with integrity.

7. A student who is **Socially and Environmentally Active and Responsible**  
- Identifies how individuals use biophysical resources and place that in a regional context.  
- Articulates recommendations for better managing biophysical environments.  
- Is able to work with peers to collect data collaboratively.

8. A student who has **Capable of Professional and Personal Judgement and Initiative**  
- Adequately follows instructions, particularly in field contexts.  
- Applies and adapts scientific knowledge to the real world.  
- Describes complex environmental systems.
9. A student who has 
Commitment to 
Continuous Learning

- Demonstrates effective time management skills by submitting good quality assignments on time and attending all lectures and practical classes.
- Reflects on their own performance by evaluating feedback from teaching staff and integrating that into subsequent assessment tasks (integrating feedback from Assignment 1 into Assignments 2 & 3).
- Shows evidence of reading scientific literature beyond that presented as recommended reading.
