E6A, Room 221

Wednesday, 2:30 - 4:30 pm

Credit points

3

Prerequisites

ELEC240(P) and (ELEC270(P) or ENGG270(P) or ELEC290(P)) and (MATH232(P) or MATH235(P))

Corequisites

Co-badged status

Unit description

This unit explores: Fourier theory, including frequency-time duality; analogue amplitude and frequency modulation; digital communication systems, including sampling, modulation and demodulation methods, source and line coding, multi-symbol signalling; noise and its effects including noise types and spectrum, information capacity, noise measures, noise performance of digital communication systems, error-control coding and decoding; and communication-system case studies.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Understanding the concepts of the transmission of information by analogue communication systems.

Understanding the concepts of the transmission of information by digital communication systems.

Ability to apply mathematical methods to the design and analysis of communication systems.

Understanding the role of the professional engineer in the design and operation of communication systems.

Ability to conduct laboratory experiments using advanced communication systems and equipment.

General Assessment Information

Detail of assessment tasks:

- Marking rubrics will be provided at the time of posting.

Submission of assessment tasks:

- via iLearn turnitin for plagiarism checks.
- typeset for all text submission unless stated otherwise.

Requirement to Pass Unit

- In order to pass this unit, a student must obtain a mark of 50% or more for the unit (i.e. obtain a passing grade P/CR/D/HD).
- In order to pass the unit, a student must obtain a mark of 50% or more for the final examination.

Hurdle Requirement

- Department deems a student to have shown a serious first attempt in a hurdle assignment through the achievement of a mark of 40% or greater in that assessment category.

Grading

- For further details about grading please refer to Schedule 1 of the [Assessment Policy](#).

Final Examinations

- Final examinations will typically take place at the end of the semester.
- To access your [Session 2 2016 personalized exam timetable](#), login using your OneID and password.
- The access the entire Session 2 2016 by unit, click here.

- Contact the [OneID Help](#) if you need help with your OneID and password.

Extensions and Late Submissions

- Extensions will only be granted as a result of Disruption of Studies Notification for which special consideration has been awarded. To apply for an extension of time for an assessment item, students must submit their Disruption of Studies Notification via [ask.mq.edu.au](#)
- Late submissions will not be marked unless a disruption of studies has been granted.

Student Responsibilities

- Be familiar with University policy and College procedures and act in accordance with those policies and procedures.
- It is the responsibility of the student to retain a copy of any work submitted. Students must produce these documents upon request. Copies of each item should be retained until the end of the grade appeal period.
- Students are to perform due diligence for their assessment grades and rectify any errors as soon as possible.

Missed Assessment and Examinations

- The University recognizes that student may experience unexpected events and circumstances that adversely affect their academic performance in assessment activities, for example illness.
- Please refer to the [Disruption of Studies Policy](#) or the Disruption of Studies Section under Policies and Procedures below.

Academic Honesty

- Using the work or ideas of another person, whether intentionally or not, and presenting them as your own without clear acknowledgment of the source is called [Plagiarism](#).
- Macquarie University promotes awareness of information ethics through its [Academic Honesty Policy](#). This means that:
- All academic work claimed as original must be the work of the person making the claim
- Academic work must not be falsified in any way
- When the ideas of others are used, these ideas must be acknowledged appropriately.
- All breaches of the [Academic Honesty Policy](#) are serious and [penalties](#) apply. Student should be aware that they may fail an assessment task, a unit, or even be excluded from the University for breaching the Academic Honesty Policy.

For each tutorial session, the solution to one selected tutorial question must be handed in using paper copy at the beginning of each tutorial class. This encourages the students to be familiar with the material covered by the tutorial before the tutorial session. Late submission of the tutorial question is not permitted. There are three Laboratory Reports which must be submitted online. Laboratory Reports which are submitted past the date and time due will receive a mark of zero. Exceptions will be made for cases where special consideration for disruption of studies has been granted.

There are two major Assignments which must be submitted online. Assignments which are submitted past the date and time due will receive a mark of zero. Exceptions will be made for cases where special consideration for disruption of studies has been granted.

Assessment Tasks

Name	Weighting	Due
<u>Tutorial Questions</u>	5%	Every tutorial
<u>Laboratory Report 1</u>	10%	4 September 2016
<u>Laboratory Report 2</u>	10%	9 October 2016
<u>Laboratory Report 3</u>	5%	30 October 2016
<u>Assignment 1</u>	10%	4 September 2016
<u>Assignment 2</u>	10%	30 October 2016
<u>Final Examination</u>	50%	Final Examination Week

Tutorial Questions

Due: **Every tutorial**

Weighting: **5%**

One tutorial question must be solved prior to the tutorial class and handed-in at the beginning of the tutorial class.

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.

Laboratory Report 1

Due: **4 September 2016**

Weighting: **10%**

Laboratory Report on Fourier Series, Modulation, Introduction to TIMS Laboratory Equipment, and QAM.

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by analogue communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Laboratory Report 2

Due: **9 October 2016**

Weighting: **10%**

Sampling, reconstruction, QPSK, and Bit Error Rate.

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Laboratory Report 3

Due: **30 October 2016**

Weighting: **5%**

Laboratory report on visits to Optus Communications and the CSIRO.

On successful completion you will be able to:

- Understanding the role of the professional engineer in the design and operation of

communication systems.

Assignment 1

Due: **4 September 2016**

Weighting: **10%**

Assignment on Analog Communication Systems

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by analogue communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.

Assignment 2

Due: **30 October 2016**

Weighting: **10%**

Assignment on Digital Communication Systems

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.

Final Examination

Due: **Final Examination Week**

Weighting: **50%**

Final Examination on Analog and Digital Communication Systems

On successful completion you will be able to:

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.

Delivery and Resources

Lecture materials, Tutorial Questions, Assignment Question, and Assignment Solutions will be uploaded to iLearn.

Lectures will be recorded on Echo Recordings.

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

New Assessment Policy in effect from Session 2 2016 http://mq.edu.au/policy/docs/assessment/policy_2016.html. For more information visit http://students.mq.edu.au/events/2016/07/19/new_assessment_policy_in_place_from_session_2/

Assessment Policy prior to Session 2 2016 <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy prior to Session 2 2016 <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Complaint Management Procedure for Students and Members of the Public http://www.mq.edu.au/policy/docs/complaint_management/procedure.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Understanding the role of the professional engineer in the design and operation of communication systems.

- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Assignment 1
- Assignment 2
- Final Examination

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Understanding the role of the professional engineer in the design and operation of communication systems.

Assessment tasks

- Laboratory Report 2
- Laboratory Report 3
- Assignment 1
- Assignment 2
- Final Examination

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally

and socially.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Understanding the role of the professional engineer in the design and operation of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Assignment 1
- Assignment 2
- Final Examination

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication

systems.

- Understanding the role of the professional engineer in the design and operation of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Assignment 1
- Assignment 2
- Final Examination

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Assignment 1

- Assignment 2
- Final Examination

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue communication systems.
- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Assignment 1
- Assignment 2
- Final Examination

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes

- Understanding the concepts of the transmission of information by analogue

communication systems.

- Understanding the concepts of the transmission of information by digital communication systems.
- Ability to apply mathematical methods to the design and analysis of communication systems.
- Understanding the role of the professional engineer in the design and operation of communication systems.
- Ability to conduct laboratory experiments using advanced communication systems and equipment.

Assessment tasks

- Tutorial Questions
- Laboratory Report 1
- Laboratory Report 2
- Laboratory Report 3
- Assignment 1
- Assignment 2
- Final Examination

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

Learning outcomes

- Ability to apply mathematical methods to the design and analysis of communication systems.
- Understanding the role of the professional engineer in the design and operation of communication systems.

Assessment task

- Laboratory Report 3

Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work

with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

Learning outcome

- Understanding the role of the professional engineer in the design and operation of communication systems.

Assessment task

- Laboratory Report 3
