Co-badged status

Unit description

Molecular biology is a central science in twenty-first century biology and biotechnology. Understanding the fundamentals of molecular biology is essential for many other fields in the life sciences, including microbiology, cell biology, immunology, and development. Molecular biology makes a significant and increasing contribution to major sectors of our society including agriculture and medicine, and is also important in environmental science and forensics. In this unit we explore topics that allow students to obtain an advanced understanding of the mechanisms of molecular biology, including those of DNA replication and recombination, prokaryotic gene expression, eukaryotic gene expression, mobile elements, the functions of the nucleus, and epigenetics. We also address topics on the rapidly changing technologies in molecular biology, including those used in genome sequencing, metagenomics, and microarray analysis. Practical sessions complement the lectures and provide students with hands-on experience with a range of critical laboratory skills including those required for DNA and RNA isolation, PCR and RT-PCR, cloning, and bioinformatics. Students gain experience in working with both bacterial and eukaryotic systems in the laboratory classes so that their skills and experience are valuable for a variety of positions in both industry and research.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.

Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.

Students will have an understanding of the revolutionary impact of genomics across all biological sciences.

Students will also display evidence of good report-writing skills including appropriate scientific referencing.

General Assessment Information

Assignments

- **All assignments must be submitted to the FSE Student Centre**
- **All assignments are to be submitted by midday on the date specified and must include a completed and signed coversheet stapled to the front cover.**

Problem Set

Problems 1 - 12 should be done in time for marking and discussion during the practical session of the **Week 12**.

Requirements

- **Students are required to satisfactorily complete all components of the unit to pass.**

Satisfactory completion of all components includes the practical assignments and the problem sets which are both integral components of the unit. Apart from the marks formally allocated to these components, a comprehensive understanding of them will greatly assist you in the final

exam. You should remember that the final exam covers **ALL** components of the unit.

- **Attendance at the practical sessions is compulsory.**

Assessment Tasks

Name	Weighting	Due
<u>Laboratory Reports</u>	25%	Apr 13, Apr 27, Jun 1
<u>Bioinformatic Report</u>	10%	June 8
<u>Mid-Semester Test</u>	10%	Week 7
<u>Problem Set</u>	5%	Week 12
<u>Final Examination</u>	50%	University Examination Period

Laboratory Reports

Due: **Apr 13, Apr 27, Jun 1**

Weighting: **25%**

3 lab reports, 1500 words each

On successful completion you will be able to:

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will also display evidence of good report-writing skills including appropriate scientific referencing.

Bioinformatic Report

Due: **June 8**

Weighting: **10%**

Report on Bioinformatic Analysis

On successful completion you will be able to:

- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.
- Students will also display evidence of good report-writing skills including appropriate scientific referencing.

Mid-Semester Test

Due: **Week 7**

Weighting: **10%**

Multiple Choice Test carried out during regularly scheduled laboratory time.

On successful completion you will be able to:

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.

Problem Set

Due: **Week 12**

Weighting: **5%**

12 Question Problem Set in Prac Manual.

On successful completion you will be able to:

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.

Final Examination

Due: **University Examination Period**

Weighting: **50%**

2 essays, 20 short answer questions

On successful completion you will be able to:

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell,

especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.

- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.

Delivery and Resources

Classes There are two weekly lectures of 1 hour (C5C Collaborative Forum, 12pm Tuesday, 11am Thursday) and a weekly practical session of 3 hours (F7B102-105, 2 – 5pm Tuesday or 9am-12pm Wednesday). In weeks 10 and 11, the practical class is replaced with a bioinformatic workshop in the same location. Attendance at practical sessions (and bioinformatic workshop) is a compulsory component of this unit. Lecture recordings and graphics slides are available online through iLearn (<https://ilearn.mq.edu.au/login/MQ/>), although lecture attendance in person is highly recommended. The practical manual is also available online through iLearn.

Required and Recommended Texts The course syllabus is defined by all of the subject material presented in lectures and practicals, much of which is beyond standard textbooks. The prescribed text for this unit is Molecular Biology Fifth edition by Robert F Weaver. Available from the Co-op bookshop. The following texts may also be useful and are available in the library:

GenesIX by Benjamin Lewin

Mobile Genetic Elements by Sherratt

Molecular Cloning: A Laboratory Manual by Maniatis, Fritsch and Sambrook

An Introduction to Genetic Engineering by Des Nicholl.

Technology Requirements Within this Unit, you will be introduced to Web-based search engines that are commonly used in molecular biology. Our expectation is that you will be able to readily access the internet and have a computer available to you for web browsing and preparation of your laboratory reports. Handwritten reports will not be accepted. Your laboratory reports will be submitted and circulated via the online Turnitin program, for which access instructions will be given at submission time. Your practical reports will require you to carry out minor computational tasks, for which a calculator and access to basic statistical tools will be required. We place a large emphasis on correct referencing style in all your reports, and use of the program EndNote is encouraged, but not essential.

Unit Schedule

Week	Date	Lecture	Title	Lecturer
1	Mar 1	1	Introduction/What is Molecular Biology/Genome Structure	Haynes
	Mar 3	2	Gene Organization/function	Haynes

2	Mar 8	3	Molecular Biology Techniques	Haynes
	Mar 10	4	Molecular Biology Techniques	Haynes
3	Mar 15	5	Molecular Cloning	Paulsen
	Mar 17	6	Tools for studying Gene Activity	Paulsen
4	Mar 22	7	Transcription in Prokaryotes	Paulsen
	Mar 24	8	Structure of Prokaryotic Operons	Paulsen
5	Mar 29	9	Bacterial Gene Regulation	Paulsen
	Mar 31	10	Transcription in Eukaryotes	Paulsen
6	Apr 5	11	Eukaryotic Gene Regulation	Paulsen
	Apr 7	12	Nucleosomes/Histones/Chromatin	Paulsen
			Semester break	
7	Apr 26	13	Messenger RNA splicing	Paulsen
	Apr 28	14	Mechanism of Translation	Paulsen
8	May 3	15	Ribosomes and transfer RNA	Paulsen
	May 5	16	DNA replication	Paulsen
9	May 10	17	DNA recombination	Paulsen
	May 12	18	DNA repair	Paulsen
10	May 17	19	Mobile DNA elements	Paulsen
	May 19	20	Mobile DNA elements	Paulsen
11	May 24	21	Genome Sequencing	Paulsen
	May 26	22	Genomes, Pan-Genomes and Metagenomics	Paulsen
12	May 31	23	Bioinformatics and Genome Annotation	Paulsen

	Jun 2	24	Functional Genomics and Systems Biology	Paulsen
13	Jun 7	25	Synthetic Biology	Paulsen
	Jun 9	26	Revision	Paulsen

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

New Assessment Policy in effect from Session 2 2016 http://mq.edu.au/policy/docs/assessment/policy_2016.html. For more information visit http://students.mq.edu.au/events/2016/07/19/new_assessment_policy_in_place_from_session_2/

Assessment Policy prior to Session 2 2016 <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy prior to Session 2 2016 <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Complaint Management Procedure for Students and Members of the Public http://www.mq.edu.au/policy/docs/complaint_management/procedure.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study

strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcomes

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.
- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
- Mid-Semester Test
- Problem Set
- Final Examination

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcomes

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.
- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.
- Students will also display evidence of good report-writing skills including appropriate scientific referencing.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
- Mid-Semester Test
- Problem Set
- Final Examination

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they

participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcome

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.

Assessment tasks

- Laboratory Reports
- Mid-Semester Test
- Problem Set
- Final Examination

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.
- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
- Mid-Semester Test
- Problem Set
- Final Examination

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.
- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.
- Students will also display evidence of good report-writing skills including appropriate scientific referencing.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
- Mid-Semester Test
- Problem Set
- Final Examination

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and

they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Students will be proficient in the theory and practice of a range of molecular biology experimental techniques, including PCR, restriction enzyme digestion, gel electrophoresis, cloning, site-directed mutagenesis, DNA sequencing and DNA hybridization.
- Students will have a thorough understanding of essential molecular processes in the cell, especially as related to DNA and RNA. These molecular processes include transcription, translation, DNA replication, recombination, DNA repair, and transposition.
- Students will have an understanding of the revolutionary impact of genomics across all biological sciences.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
- Mid-Semester Test
- Problem Set
- Final Examination

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcome

- Students will also display evidence of good report-writing skills including appropriate scientific referencing.

Assessment tasks

- Laboratory Reports
- Bioinformatic Report
