Unit description
The Anthropocene has been identified as a new geological epoch in which humanity is the driving force of global environmental change. Scientists are concerned that the planetary boundaries that have nurtured and sustained human and non-human life are at risk of being breached. In this unit we explore how social scientists and the humanities are responding to these concerns. Previous academic divisions of labour in which physical scientists working on natural processes and the social sciences and humanities focused on human societies are being dissolved. This unit focuses on those researchers working on the spaces in-between, connecting human and non-human worlds. Understanding these connections, or reconceptualising nature and society altogether, by incorporating concepts such as the Anthropocene, social-nature, coupled human and natural systems as well as Indigenous perspectives, has become increasingly important as we search for alternative futures. The unit provides a critical introduction to the theories and concepts that are becoming vital to understanding and living in the Anthropocene.
Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at [http://students.mq.edu.au/student_admin/enrolmentguide/academicdates/](http://students.mq.edu.au/student_admin/enrolmentguide/academicdates/)

Learning Outcomes

1. Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
2. Identify and reflect on novel areas of research and engagement across human and non-human boundaries
3. Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
4. Improve skills in written, verbal and conversational forms of research communication

General Assessment Information

A 5% penalty per day applies for late assessment tasks. If you require an extension for an assessment task please email Andrew and Marilu with details regarding why an extension should be granted and accompanying documents (eg Doctor's Certificate).

Living the Anthropocene blog

Due: **From weeks 2-10**

Weighting: **25%**

*Living in the Anthropocene* blog (25%) – Each week one student will write a blog post linked to the weekly theme (to be assigned in Week 1). The blog should draw from the readings from that week and link to a 'real world' example. This can be a current or past issue or something more personal - related to your own life. It should be written in a topical and engaging style but be referenced and rigorous in its exploration of concepts and ideas. The aim of the blog is to generate a discussion space where we share ideas about what it means to live in the Anthropocene.
The blog must be posted by 9am on the Monday morning of class to allow other students to review the blog and make comments. The blog entry should be around 1500 words and no longer than 2000 words. Students should use in-text referencing (e.g. Crutzen, 2012, p. 23) and include a full list of references (this won’t be included in the word count). Blog writing resources are available on iLearn. Any student receiving an HD for their blogpost will be invited to have it republished on the Department of Geography and Planning’s Groundwork blog.

The student who created the blogpost will be expected to discuss it in the corresponding class.

This Assessment Task relates to the following Learning Outcomes:

• Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
• Identify and reflect on novel areas of research and engagement across human and non-human boundaries
• Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
• Improve skills in written, verbal and conversational forms of research communication

Weekly reflective summaries
Due: weekly
Weighting: 25%

Weekly reflective summaries. Each week you are required to submit a brief (1-2 page) reflective summary of the required readings for that week. The readings will provide the basis for the in class discussions. Your reflective summary should consider what new insights you gained from the readings, what you found most interesting, any points that you disagreed with. In total there are 8 short reflective summaries due.

This Assessment Task relates to the following Learning Outcomes:

• Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
• Identify and reflect on novel areas of research and engagement across human and non-human boundaries
• Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
• Improve skills in written, verbal and conversational forms of research communication

Anthropocene field project
Due: Weeks 5 and 13
Weighting: 40%
**Anthropocene field project essay.** The Anthropocene field project is a field based essay assignment linked to individual MRes research interests. Students will examine how engaging with ideas, theories and understandings related to the Anthropocene ‘reframes’ the way they are approaching the conceptual development of their own project. The ‘field study’ component of the project is flexibly defined – it might involve working out how ‘nonhumans’ might be considered in books, media or film or involve some observational site visits to places such as zoos, community gardens, National Herbarium of NSW, wetlands, parks, arts galleries and museums. The Anthropocene field project has two elements:

a. Essay outline – identifying the topic, approach, resources, and key ideas to be discussed in the essay due to Turnitin in Week 5 – this will be handed back with feedback before the semester break

b. The project essay (3000 words) due to Turnitin in Week 13.

This Assessment Task relates to the following Learning Outcomes:

- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
- Improve skills in written, verbal and conversational forms of research communication

**Anthropocene presentation**

Due: **Week 12**  
Weighting: **10%**

In this task students are required to make an **Anthropocene Presentation** based on their field project essay to class. The presentation should describe what research they undertook for Assessment Task 3 and how this, and the unit in general, has influenced their thinking about their MRes year 2 research project.

This Assessment Task relates to the following Learning Outcomes:

- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
- Improve skills in written, verbal and conversational forms of research communication

**Delivery and Resources**

FOAR703 will be taught through a series of two-hour discussion-based workshops hosted by researchers from across the Faculty of Arts. Students will be set required readings before the workshop and these readings will form the basis for in-depth workshop discussions. The unit is
Unit guide FOAR703 Living in the Anthropocene

supported by an iLearn website – where readings and assessment instructions and criteria will be made available. Please note that this unit requires compulsory attendance at the workshops. Recordings of workshops are not available on iLearn.

## Unit Schedule

Week 12 (AM) 30 May

Researching the Anthropocene – student projects

Andrew McGregor

Students present their Anthropocene field projects – and reflect on their learning in the unit

**Policies and Procedures**

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

**Results**

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit [ask.mq.edu.au](http://ask.mq.edu.au).

**Student Support**

Macquarie University provides a range of support services for students. For details, visit [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)
Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

Student Enquiry Service

For all student enquiries, visit Student Connect at ask.mq.edu.au

Equity Support

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University’s IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes

- Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
- Improve skills in written, verbal and conversational forms of research communication
Assessment tasks

- Weekly reflective summaries
- Anthropocene field project
- Anthropocene presentation

PG - Critical, Analytical and Integrative Thinking

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
- Improve skills in written, verbal and conversational forms of research communication

Assessment tasks

- Living the Anthropocene blog
- Weekly reflective summaries
- Anthropocene field project

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcome

- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
Assessment tasks

- Weekly reflective summaries
- Anthropocene field project

PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

Learning outcome

- Improve skills in written, verbal and conversational forms of research communication

Assessment tasks

- Living the Anthropocene blog
- Weekly reflective summaries
- Anthropocene field project
- Anthropocene presentation

PG - Engaged and Responsible, Active and Ethical Citizens

Our postgraduates will be ethically aware and capable of confident transformative action in relation to their professional responsibilities and the wider community. They will have a sense of connectedness with others and country and have a sense of mutual obligation. They will be able to appreciate the impact of their professional roles for social justice and inclusion related to national and global issues.

This graduate capability is supported by:

Learning outcomes

- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project

Assessment tasks

- Living the Anthropocene blog
- Anthropocene field project
- Anthropocene presentation
PG - Capable of Professional and Personal Judgment and Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

**Learning outcomes**

- Develop advanced knowledge and understanding of the Anthropocene from multidisciplinary perspectives
- Identify and reflect on novel areas of research and engagement across human and non-human boundaries
- Develop an understanding of emergent themes and key challenges of the Anthropocene and how this relates to student’s academic discipline and MRes project
- Improve skills in written, verbal and conversational forms of research communication

**Assessment tasks**

- Living the Anthropocene blog
- Anthropocene field project
