Prerequisites

MATH132 or MATH135

Corequisites

Co-badged status

Unit description

The ideas related to systems of linear equations introduced in MATH135 are further developed to study ideas related to linearity, including matrices, determinants, eigenvalues and eigenvectors and diagonalisation in Euclidean spaces. Complex numbers, polynomials and rational functions are covered in reasonable detail. The study of differential and integral calculus is taken further by the discussion of additional techniques of integration and the study of first-order and second-order ordinary differential equations, and the notion of a limit is enhanced by the study of sequences and series and their convergence. Finally, we will discuss some aspects relating to the continuity and differentiability of functions of two real variables.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.

Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.

Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.

Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.

Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.

Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## General Assessment Information

**HURDLES:** This unit has no hurdle requirements. This means that there are no second chance examinations and assessments if you happen to fail at your first attempt. Students should aim to get at least 60% for the course work in order to be reasonably confident of passing the unit.

**IMPORTANT:** If you apply for Disruption to Study for your final examination, you must make yourself available for the week of [July 24 – 28, 2017](#). If you are not available at that time, there is no guarantee an additional examination time will be offered. Specific examination dates and times will be determined at a later date.

## Assessment Tasks

Name	Weighting	Hurdle	Due
<a href="#">Assignments</a>	30%	No	See iLearn site
<a href="#">Tutorial Quizzes</a>	20%	No	Weekly
<a href="#">Class Test</a>	10%	No	See iLearn site
<a href="#">Final examination</a>	40%	No	University Examination Period

## Assignments

Due: **See iLearn site**

Weighting: **30%**

Three assignments

On successful completion you will be able to:

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.
- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Tutorial Quizzes

Due: **Weekly**

Weighting: **20%**

Tutorial quizzes based on the previous tutorial class

On successful completion you will be able to:

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.

- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Class Test

Due: **See iLearn site**

Weighting: **10%**

Mid semester class test conducted in tutorials

On successful completion you will be able to:

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.
- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Final examination

Due: **University Examination Period**

Weighting: **40%**

Final exam

On successful completion you will be able to:

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.

- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Delivery and Resources

### Classes

**Lectures:** You should attend all four lectures each week, making a total of four hours.

**Tutorials:** You should attend one tutorial each week.

**Workshops:** The Numeracy centre provides these for students wanting to see more examples and ask further questions. Attendance is strongly recommended. Registration is not required.

### Required and Recommended Texts and/or Materials

The required texts for MATH136 are

- Anton & Rorres: Elementary Linear Algebra, Applications Version , 11th Edition, Wiley 2014
- Hughes-Hallet et al: Calculus Single and Multivariable, 6th Edition, Wiley 2014

## Unit Schedule

Week	Topic
1	Complex Numbers
2	Matrices and matrix algebra
3	Determinants, eigenvalues and eigenvectors
4	Diagonalization and applications
5	Linear transformations in the plane
6	Polynomials and rational functions
7	Partial fractions
8	Ordinary differential equations - first and second order linear equations
9	Linear systems of differential equations
10	Sequences and series
11	Power series and Taylor series
12	Functions of several variables : limits, continuity and partial derivatives
13	Revision

## Learning and Teaching Activities

### Lectures

There will be four one hour lectures per week. During these the content of the unit will be explained and example problems will be solved and applications in other disciplines discussed.

### Tutorials

There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.

### Workshop

There is a weekly optional workshop provided by the Numeracy Centre.

## Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy [http://mq.edu.au/policy/docs/academic\\_honesty/policy.html](http://mq.edu.au/policy/docs/academic_honesty/policy.html)

Assessment Policy [http://mq.edu.au/policy/docs/assessment/policy\\_2016.html](http://mq.edu.au/policy/docs/assessment/policy_2016.html)

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Complaint Management Procedure for Students and Members of the Public [http://www.mq.edu.au/policy/docs/complaint\\_management/procedure.html](http://www.mq.edu.au/policy/docs/complaint_management/procedure.html)

Disruption to Studies Policy (in effect until Dec 4th, 2017): [http://www.mq.edu.au/policy/docs/disruption\\_studies/policy.html](http://www.mq.edu.au/policy/docs/disruption_studies/policy.html)

Special Consideration Policy (in effect from Dec 4th, 2017): <https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policies/special-consideration>

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

### Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student\\_conduct/](https://students.mq.edu.au/support/student_conduct/)

### Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit [ask.mq.edu.au](http://ask.mq.edu.au).

### Student Support

Macquarie University provides a range of support services for students. For details, visit <http://stu>

[dents.mq.edu.au/support/](https://dents.mq.edu.au/support/)

## Learning Skills

Learning Skills ([mq.edu.au/learningskills](https://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

## Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

## Student Enquiries

For all student enquiries, visit Student Connect at [ask.mq.edu.au](https://ask.mq.edu.au)

## IT Help

For help with University computer systems and technology, visit [http://www.mq.edu.au/about\\_us/offices\\_and\\_units/information\\_technology/help/](http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/).

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

## Graduate Capabilities

### Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

### Learning and teaching activities

- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.

### Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing

environments.

This graduate capability is supported by:

## Learning outcome

- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Assessment tasks

- Assignments
- Tutorial Quizzes
- Class Test
- Final examination

## Learning and teaching activities

- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.

## Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

## Learning and teaching activities

- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.

## Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

## Learning outcomes

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.

## Assessment tasks

- Assignments
- Tutorial Quizzes
- Class Test
- Final examination

## Learning and teaching activities

- There will be four one hour lectures per week. During these the content of the unit will be explained and example problems will be solved and applications in other disciplines discussed.
- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.
- There is a weekly optional workshop provided by the Numeracy Centre.

## Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

## Learning outcomes

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.

- Demonstrate facility with a range of integration techniques and methods for solving ordinary differential equations.
- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.
- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Assessment tasks

- Assignments
- Tutorial Quizzes
- Class Test
- Final examination

## Learning and teaching activities

- There will be four one hour lectures per week. During these the content of the unit will be explained and example problems will be solved and applications in other disciplines discussed.
- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.
- There is a weekly optional workshop provided by the Numeracy Centre.

## Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

## Learning outcomes

- Demonstrate a well-developed knowledge of the properties of matrices and the role of eigenvectors and eigenvalues in the study of linear systems.
- Demonstrate facility with a range of integration techniques and methods for solving

ordinary differential equations.

- Understand the concepts of sequences and series and their convergence, and apply a range of convergence tests.
- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.
- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## Assessment tasks

- Assignments
- Tutorial Quizzes
- Class Test
- Final examination

## Learning and teaching activities

- There will be four one hour lectures per week. During these the content of the unit will be explained and example problems will be solved and applications in other disciplines discussed.
- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.
- There is a weekly optional workshop provided by the Numeracy Centre.

## Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

## Learning outcomes

- Construct elementary mathematical arguments, using the concepts and techniques studied in this unit.
- Express mathematical ideas clearly and logically, providing appropriate justification for conclusions.

- Apply the concepts and techniques studied in this unit to a range of applications, particularly drawn from Physics and Engineering.

## **Assessment tasks**

- Assignments
- Tutorial Quizzes
- Class Test
- Final examination

## **Learning and teaching activities**

- There is a two-hour tutorial class each week. During this time students will discuss problems related to the previous week's lecture content and work through similar problems.

## **Changes from Previous Offering**

No changes in content, but there will be two lecturers this session.

## **Extra requirements**
