Unit description

This unit examines the technology used in modern data communication networks including local-area, wide-area, metropolitan and access networks with emphasis on the concepts and general principles of those technologies. The focus is on layers 1 and 2 of the OSI reference model. The unit examines commonly used and new networking technologies including Ethernet, wireless networks, optical networks, time-division multiplexing networks, cellular and ADSL networks. The unit examines these technologies from a number of different perspectives including physical-layer communications, medium access control (MAC), link-layer protocol, network architecture, connection control, network device, network performance and quality of service. A practical component gives students skills in using and configuring network equipment and using network simulation tools.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.

Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.

Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.

Be able to design, build and operate networks using switches and routers.

Understand networks and communications systems from a systems perspective.

Be able to work in small groups on networking problems.

Assessment Tasks

Name	Weighting	Due
<u>Final examination</u>	60%	Examination period
<u>Assignment 1</u>	5%	Week 4
<u>Assignment 2</u>	5%	Week 7
<u>Assignment 3</u>	5%	Week 10
<u>Assignment 4</u>	5%	Week 12
<u>Major report</u>	12%	Week 13
<u>Laboratories</u>	8%	Throughout semester

Final examination

Due: **Examination period**

Weighting: **60%**

Closed book examination of 3 hours duration.

On successful completion you will be able to:

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.

- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.
- Understand networks and communications systems from a systems perspective.

Assignment 1

Due: **Week 4**

Weighting: **5%**

Set of problems.

On successful completion you will be able to:

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.
- Understand networks and communications systems from a systems perspective.

Assignment 2

Due: **Week 7**

Weighting: **5%**

Set of problems.

On successful completion you will be able to:

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling

and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.

- Understand networks and communications systems from a systems perspective.

Assignment 3

Due: **Week 10**

Weighting: **5%**

Set of problems.

On successful completion you will be able to:

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.
- Understand networks and communications systems from a systems perspective.

Assignment 4

Due: **Week 12**

Weighting: **5%**

Set of problems.

On successful completion you will be able to:

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Understand networks and communications systems from a systems perspective.

Major report

Due: **Week 13**

Weighting: **12%**

An essay style report involving research and analysis of a topic in communications networks and

technology.

On successful completion you will be able to:

- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.
- Be able to design, build and operate networks using switches and routers.
- Understand networks and communications systems from a systems perspective.

Laboratories

Due: **Throughout semester**

Weighting: **8%**

Assessment based on work done in laboratories with networking equipment, Matlab and Opnet simulation.

On successful completion you will be able to:

- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Be able to design, build and operate networks using switches and routers.
- Understand networks and communications systems from a systems perspective.
- Be able to work in small groups on networking problems.

Delivery and Resources

Practical sessions

There are eleven weekly laboratory sessions, starting in Week 2.

Laboratory Attendance

Laboratory attendance is compulsory and a roll will kept for the laboratory. Satisfactory attendance requires attendance for at least 8 sessions.

Late assignments

Late assignments will be penalised 10% per day of lateness except if a request for extension based on medical or other exception circumstances is submitted (through ask.mq.edu.au as a special consideration) and approved.

Technology used

Library and internet search engines, word processing and presentation software, Opnet simulation and analysis tools, Cisco switches and routers, Atlas ADTRAN switches, Matlab software.

Laboratory Safety

No student will be permitted to enter the laboratory without proper footwear. THONGS OR SANDALS ARE NOT ACCEPTABLE. NO FOOD OR DRINK may be taken into the laboratory.

Text book

Communication Networks A Concise Introduction, by J. Walrand and S. Parekh, Morgan & Claypool Publishers, 2010.

Reference book(s)

Networking, Second edition, J. S. Beasley, Pearson, 2009.

Data Communications and Networking, 4th Edition by B. A. Forouzan, McGraw-Hill, 2007.

Data and Computer Communications, 9th ed W. Stallings, Pearson, 2012

Lecture and laboratory notes

Lecture notes, laboratory notes, workshop notes, assignments and resources are provided online through iLearn.

Unit Schedule

Week	Topics	Practical
1	Introduction to networking principles. Ethernet - Introduction, frame format, devices, CSMA.	No practical
2	Ethernet - Spanning tree protocol, VLANS.	Switches - Introduction and MAC address tables
3	Ethernet - Physical layer.	Switches, Ethereal
4	Wireless LANs	Switches - spanning tree protocol
5	Wireless LANs	Switches - VLANS
6	Frame relay and ATM networks	Switches - VTP
7	TDM networks, Optical networks	Frame relay switches
8	Internet - sharing, metrics, scalability	ALOHA protocol analysis (Matlab)
9	Queueing	Markov chains (Matlab)
10	Capacity allocation	802.11 performance (Matlab)

11	Quality of service	Opnet
12	Analogue transmission and wireless communications	Opnet
13	LTE, Spare, review	Opnet

Learning and Teaching Activities

Lectures

Lectures are used to cover concepts and techniques communication networks and the theoretical component of the unit. There are two one hour lectures a week. The first lecture is followed by a one hour tutorial.

Practicals

Practical sessions for the first half of the unit involve constructing LANS and configuring Cisco switches. There is a practical on configuring frame relay switches using the Atlas ADTRAN switch. The practicals in the second half of the unit involve use of the Matlab to study the performance of communications networks and the use of the Opnet simulator to model various networking scenarios.

Tutorials

The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

Assessment Policy <http://mq.edu.au/policy/docs/assessment/policy.html>

Grading Policy <http://mq.edu.au/policy/docs/grading/policy.html>

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Grievance Management Policy http://mq.edu.au/policy/docs/grievance_management/policy.html

Disruption to Studies Policy http://www.mq.edu.au/policy/docs/disruption_studies/policy.html *The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.*

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/support/student_conduct/

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help

For help with University computer systems and technology, visit <http://informatics.mq.edu.au/help/>.

When using the University's IT, you must adhere to the [Acceptable Use Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcomes

- Be able to design, build and operate networks using switches and routers.
- Be able to work in small groups on networking problems.

Assessment tasks

- Major report
- Laboratories

Learning and teaching activities

- Practical sessions for the first half of the unit involve constructing LANS and configuring Cisco switches. There is a practical on configuring frame relay switches using the Atlas ADTRAN switch. The practicals in the second half of the unit involve use of the Matlab to study the performance of communications networks and the use of the Opnet simulator to model various networking scenarios.
- The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcomes

- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Be able to work in small groups on networking problems.

Assessment tasks

- Major report
- Laboratories

Learning and teaching activities

- Lectures are used to cover concepts and techniques communication networks and the theoretical component of the unit. There are two one hour lectures a week. The first

lecture is followed by a one hour tutorial.

- Practical sessions for the first half of the unit involve constructing LANS and configuring Cisco switches. There is a practical on configuring frame relay switches using the Atlas ADTRAN switch. The practicals in the second half of the unit involve use of the Matlab to study the performance of communications networks and the use of the Opnet simulator to model various networking scenarios.
- The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.
- Understand networks and communications systems from a systems perspective.

Assessment tasks

- Final examination
- Assignment 1
- Assignment 2
- Assignment 3
- Assignment 4
- Major report

The practicals in the second half of the unit involve use of the Matlab to study the performance of communications networks and the use of the Opnet simulator to model various networking scenarios.

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.

- The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge of a range of modelling techniques, including mathematical modelling and simulation modelling, including appropriate simulation tools, to design and analyse communication technologies and networks.

- The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcomes

- Understand and be able to apply high level principles to describe, design and analyse communication technologies and networks.
- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.

The practicals in the second half of the unit involve use of the Matlab to study the performance of communications networks and the use of the Opnet simulator to model various networking scenarios.

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes

- Have knowledge and understanding of a range of modern communication and networking technologies and be able to analyse these technologies in terms of the high level principles in point 1.
- Be able to work in small groups on networking problems.

work.

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

Learning outcome

- Be able to work in small groups on networking problems.

Assessment task

- Laboratories

Learning and teaching activity

Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

Learning outcome

- Understand networks and communications systems from a systems perspective.

Assessment task

- Laboratories

Learning and teaching activity

- The 2 hour lecture period is divided into a one hour (approximately) lecture followed by a tutorial. The purpose of the tutorial is to support the study of lecture material and other work.

Changes from Previous Offering

Changes from the previous offering are as follows: The two hour lecture period (Tues 10-12) will be used as a one hour lecture and a one hour tutorial. The second lecture will be Thursday 10-11. The unit will be taught by two lecturers: Rein Vesilo (first half) and Phillip Whiting (second half). There has been some reordering of lecture material as a consequence. The workshop session has been deleted and replaced by a tutorial session. Some workshop exercises have been converted into Matlab practicals. The major report will not be Opnet based but will be based on an essay researching and analysing communications networks and technologies.

Satisfactory performance

A satisfactory performance in ALL aspects of the unit is required to pass.
