Prerequisites

Admission to MMarScMgt or MConsBiol or GradDipConsBiol or MPlan or MSc

Corequisites

Co-badged status

Unit description

This unit introduces students to current research undertaken in various disciplines of marine science in Australia. It is a multi-institutional unit taught at the Sydney Institute of Marine Science (SIMS) with contributions from the four university partners of SIMS. Lectures and tutorials are taught by leading marine science researchers. Topics cover physical and biological oceanography, climate change, molecular ecology, aquaculture, marine biology and marine geosciences. In practical classes, students analyse and interpret remote-sensing data from the Integrated Marine Observing System, which provides comprehensive information on the biological and physical processes of Australia's coastal and oceanic waters.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

After completion of this unit, you should be able to adopt a critical thinking, evidence--based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the

following learning outcomes.

1. Understanding of the diversity of IMOS data and instrumentation for data collection: The Australian Integrated Marine Observing System (IMOS) national facility is collecting comprehensive biological data as well as complex physical and oceanographic data that give a real picture of the coast. By being exposed to the full range of IMOS data you will learn about the different instrumentation (remote sensing equipment, acoustic arrays, autonomous underwater vehicles, ocean gliders) that is used to measure marine systems.
2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
3. Accessing and managing data: The internet has made it possible to access large amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.
4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools specifically developed for the unit.
5. Presenting and visualising data You will learn how to effectively communicate your results through writing a scientific report on your findings.

## Assessment Tasks

Name	Weighting	Hurdle	Due
<u><a href="#">DRAFT ONLY Practical exercises</a></u>	60%	No	as per SIMS schedule
<u><a href="#">DRAFT ONLY Writing assignment</a></u>	10%	No	11 May 2017
<u><a href="#">DRAFT ONLY Examination</a></u>	30%	No	8 June 2017

### DRAFT ONLY Practical exercises

Due: **as per SIMS schedule**

Weighting: **60%**

**Practical Exercises** - you will be required to hand in the results of your practical class exercises at the beginning of the practical class the week following the module's completion. Each module is worth 5%, but some may be assessed over two weeks (and so will be worth 10%).

**THIS IS A DRAFT ONLY - See the printed SIMS unit guide for TAMS for complete instructions.**

On successful completion you will be able to:

- After completion of this unit, you should be able to adopt a critical thinking, evidence--based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the following learning outcomes.
- 1. Understanding of the diversity of IMOS data and instrumentation for data collection: The Australian Integrated Marine Observing System (IMOS) national facility is collecting comprehensive biological data as well as complex physical and oceanographic data that give a real picture of the coast. By being exposed to the full range of IMOS data you will learn about the different instrumentation (remote sensing equipment, acoustic arrays, autonomous underwater vehicles, ocean gliders) that is used to measure marine systems.
- 2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
- 3. Accessing and managing data: The internet has made it possible to access large amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.
- 4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools specifically developed for the unit.
- 5. Presenting and visualising data You will learn how to effectively communicate your results through writing a scientific report on your findings.

## DRAFT ONLY Writing assignment

Due: **11 May 2017**

Weighting: **10%**

**Writing assignment** - You will be provided with the outline of the writing assignment in week 3. See the SIMS unit guide for TAMS for full instructions.

**THIS IS A DRAFT ONLY - See the printed SIMS unit guide for TAMS for complete instructions.**

On successful completion you will be able to:

- After completion of this unit, you should be able to adopt a critical thinking, evidence-based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the following learning outcomes.
- 1. Understanding of the diversity of IMOS data and instrumentation for data collection: The Australian Integrated Marine Observing System (IMOS) national facility is collecting comprehensive biological data as well as complex physical and oceanographic data that give a real picture of the coast. By being exposed to the full range of IMOS data you will learn about the different instrumentation (remote sensing equipment, acoustic arrays, autonomous underwater vehicles, ocean gliders) that is used to measure marine systems.
- 2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
- 3. Accessing and managing data: The internet has made it possible to access large amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.
- 4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools specifically developed for the unit.
- 5. Presenting and visualising data You will learn how to effectively communicate your results through writing a scientific report on your findings.

## DRAFT ONLY Examination

Due: **8 June 2017**

Weighting: **30%**

**Examination** - see the SIMS printed unit guide for TAMS for instructions (note the duration of the final examination has not been finalised).

**THIS IS A DRAFT ONLY - See the printed SIMS unit guide for TAMS for complete instructions.**

On successful completion you will be able to:

- After completion of this unit, you should be able to adopt a critical thinking, evidence--based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the following learning outcomes.
- 1. Understanding of the diversity of IMOS data and instrumentation for data collection: The Australian Integrated Marine Observing System (IMOS) national facility is collecting comprehensive biological data as well as complex physical and oceanographic data that give a real picture of the coast. By being exposed to the full range of IMOS data you will learn about the different instrumentation (remote sensing equipment, acoustic arrays, autonomous underwater vehicles, ocean gliders) that is used to measure marine systems.
- 2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
- 4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools specifically developed for the unit.

## Delivery and Resources

### Study commitment

All classes in BIOL877 are held on Thursdays at the Sydney Institute of Marine Science.

### Practical classes

The practical classes will introduce you to IMOS – Australia’s Integrated Marine Observing System, a national infrastructure facility that collects oceanographic data from Australia’s coasts and oceans. These data are made publicly available and used by scientists to explore and monitor biological and oceanographic processes in the coastal and marine environment.

During most weeks of the semester there is a weekly one-hour tutorial followed by a two-hour practical class. Attendance to the tutorials and practical classes is compulsory.

Students absent from more than one practical class without approval will be penalized 5% from

their final semester mark for every class missed.

Please inquire with your university about special consideration for longer absences.

### Seminars/lectures

The seminar series is built around the most current research questions in Australian marine science. Scientists from a number of disciplines will present their research and the most important research questions in their field in a one-hour seminar.

Seminars take place weekly.

## Unit Schedule

**THIS IS A DRAFT TIMETABLE ONLY AND WILL BE UPDATED AT THE FIRST CLASS ON 2 MARCH 2017.**

2017 Topics in Australian Marine Science (TAMS) Unit Schedule:

TAMS will be following the Universities Australia Academic dates. As such the first day of classes will be **Thursday 2nd March**. There will be no classes on Thursday 20th April (mid-semester break) and we will finish on 8th June with the exam and a BBQ.

Classes start 9:30AM in the SIMS admin building (Building 19, Chowder Bay Road, Mosman) and finish 2:15.

2017 Topics in Australian Marine Science (TAMS) Course Schedule			
Tutorials/Practical (9:30am – 12:30pm)		Lunch	Seminars (1:15 – 2:15 pm)
Week 1 (2 Mar)	PRAC 1: 1. Welcome (Peter); 2. Course Overview/Expectations/Computing (Jason & Jess); 3. Introduction to the IMOS Ocean Portal (IMOS; Xavier Hoenner)	Welcome lunch	Marine Microbes around Australia (Justin Seymour)
Week 2 (9 Mar)	PRAC 2: Satellite Remote Sensing (Martina Doblin)		Climate Change (Maria Byrne)
Week 3 (16 Mar)	PRAC 3: Satellite Remote Sensing (Jason Everett and Paulina Cetina-Heredia)	SIMS Lab Tour	Lagrangian Processes (Paulina Cetina-Heredia)
Week 4 (23 Mar)	PRAC 4: Physical Oceanography - Argos and Drifters (Paulina Cetina-Heredia)		Shark Ecology (Vic Peddemors)
Week 5 (30 Mar)	PRAC 5: Physical Oceanography - Gliders (Moninya Roughan)		Moorings (Moninya Roughan)

Week 6 (6 Apr)	PRAC 6: Physical Oceanography - Moorings (Matt Archer)	DPI Age and Growth	Fisheries Research and Management (John Stewart and Doug Ferrell)
Week 7 (13 April)	PRAC 7: Physical Oceanography - Radar (Matt Archer)		Biological Oceanography (Iain Suthers)
<b>Mid-semester break : 25 Mar - 3 Apr</b>			
Week 8 (27 Apr)	PRAC 8: Zooplankton Ecology (Anthony Richardson, Jason Everett & Iain Suthers)		Zooplankton Ecology (Anthony Richardson)
Week 9 (4 May)	PRAC 9: Zooplankton Ecology (Iain Suthers and Jason Everett)	SIMS Visitors Centre	Animal Tracking (Kate Lee)
Week 10 (11 May)	PRAC 10: Animal Tracking (Kate Lee)		Antarctic Marine Research (Graeme Clark)
Week 11 (18 May)	PRAC 11: Animal Tracking (Kate Lee)		Benthic Ecology (Ziggy Marzinelli)
Week 12 (25 May)	PRAC 12: Autonomous Underwater Vehicles (Ziggy Marzinelli)		Large Scale Restoration of Tidal Ecosystems (Will Glamore)
Week 13 (1 Jun)	PRAC 13: Autonomous Underwater Vehicles (Ziggy Marzinelli)		Geosciences (Eleanor Bruce)
Week 14 (8 Jun)	EXAM (Jessica Boomer)	Final BBQ	BBQ

This year it looks like Macquarie also has mid-semester breaks in week 8 of the TAMS program. Students will be expected to attend class in week 8 unless they have a university field trip.

## Learning and Teaching Activities

### Practical Classes

practical classes will start at 9.30 am in the Seminar Room of the main administration building (Building 19) at the Sydney Institute of Marine Science (SIMS). The practical will run for 3 hours (9.30-12.30) followed by a seminar from 1.15 pm-2.15 pm.

## Seminars/lectures

Lectures and tutorials will be taught by leading marine science researchers. Topics will cover physical and biological oceanography, climate change, molecular ecology, aquaculture, marine biology and marine geosciences.

## Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](#). Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy [http://mq.edu.au/policy/docs/academic\\_honesty/policy.html](http://mq.edu.au/policy/docs/academic_honesty/policy.html)

Assessment Policy [http://mq.edu.au/policy/docs/assessment/policy\\_2016.html](http://mq.edu.au/policy/docs/assessment/policy_2016.html)

Grade Appeal Policy <http://mq.edu.au/policy/docs/gradeappeal/policy.html>

Complaint Management Procedure for Students and Members of the Public [http://www.mq.edu.au/policy/docs/complaint\\_management/procedure.html](http://www.mq.edu.au/policy/docs/complaint_management/procedure.html)

Disruption to Studies Policy (in effect until Dec 4th, 2017): [http://www.mq.edu.au/policy/docs/disruption\\_studies/policy.html](http://www.mq.edu.au/policy/docs/disruption_studies/policy.html)

Special Consideration Policy (in effect from Dec 4th, 2017): <https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policies/special-consideration>

In addition, a number of other policies can be found in the [Learning and Teaching Category](#) of Policy Central.

## Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student\\_conduct/](https://students.mq.edu.au/support/student_conduct/)

## Results

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit [ask.mq.edu.au](http://ask.mq.edu.au).

## Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

## Learning Skills

Learning Skills ([mq.edu.au/learningskills](http://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)

- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

## Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

## Student Enquiries

For all student enquiries, visit Student Connect at [ask.mq.edu.au](http://ask.mq.edu.au)

## IT Help

For help with University computer systems and technology, visit [http://www.mq.edu.au/about\\_us/offices\\_and\\_units/information\\_technology/help/](http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/).

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

## Graduate Capabilities

### PG - Capable of Professional and Personal Judgment and Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

### Learning outcomes

- 1. Understanding of the diversity of IMOS data and instrumentation for data collection: The Australian Integrated Marine Observing System (IMOS) national facility is collecting comprehensive biological data as well as complex physical and oceanographic data that give a real picture of the coast. By being exposed to the full range of IMOS data you will learn about the different instrumentation (remote sensing equipment, acoustic arrays, autonomous underwater vehicles, ocean gliders) that is used to measure marine systems.
- 2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
- 3. Accessing and managing data: The internet has made it possible to access large

amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.

- 4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools specifically developed for the unit.
- 5. Presenting and visualising data You will learn how to effectively communicate your results through writing a scientific report on your findings.

## **Assessment tasks**

- DRAFT ONLY Practical exercises
- DRAFT ONLY Writing assignment

## **Learning and teaching activities**

- practical classes will start at 9.30 am in the Seminar Room of the main administration building (Building 19) at the Sydney Institute of Marine Science (SIMS). The practical will run for 3 hours (9.30-12.30) followed by a seminar from 1.15 pm-2.15 pm.
- Lectures and tutorials will be taught by leading marine science researchers. Topics will cover physical and biological oceanography, climate change, molecular ecology, aquaculture, marine biology and marine geosciences.

## **PG - Discipline Knowledge and Skills**

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

## **Learning outcomes**

- After completion of this unit, you should be able to adopt a critical thinking, evidence--based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the following learning outcomes.
- 3. Accessing and managing data: The internet has made it possible to access large amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.
- 4. Analysing large data sets You will develop skills to analyse large data sets that are

specific for the marine environment using a variety of software programs and tools specifically developed for the unit.

## **Assessment tasks**

- DRAFT ONLY Practical exercises
- DRAFT ONLY Writing assignment
- DRAFT ONLY Examination

## **Learning and teaching activities**

- Lectures and tutorials will be taught by leading marine science researchers. Topics will cover physical and biological oceanography, climate change, molecular ecology, aquaculture, marine biology and marine geosciences.

## **PG - Critical, Analytical and Integrative Thinking**

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

## **Learning outcomes**

- After completion of this unit, you should be able to adopt a critical thinking, evidence--based approach to key research questions in marine science and management. The acquired knowledge and skills will be directly transferable to the workplace and professional practice. The case-based problems developed for this unit focus on the following learning outcomes.
- 2. Formulating and testing hypotheses: IMOS data is being used by researchers to answer important questions such as ocean and climate change and variability, major boundary currents, continental shelf processes and biological responses. You will be able to formulate your own hypotheses associated with these topics and decide on how much data is needed to test it.
- 3. Accessing and managing data: The internet has made it possible to access large amounts of data covering extensive spatial scales. New skills are needed to access and manage those large data sets. You will learn how to access and manage large datasets using online tools and other software.
- 4. Analysing large data sets You will develop skills to analyse large data sets that are specific for the marine environment using a variety of software programs and tools

specifically developed for the unit.

## **Assessment tasks**
