Unit description

This unit introduces students to the principles and concepts of data storage, modelling and management with an emphasis on role of data and information in organisations. The unit will cover conceptual modelling techniques, converting conceptual data models into relational data models and verifying its structural characteristics with normalisation techniques, and implementing and utilising a relational database using a database-management system. Fundamental data modelling tools, techniques such as ER Modelling and query languages such as Structured Query Language (SQL) will be used. Concepts relating to data warehousing, governance, administration, security and privacy, ethical and green approaches to the collection, backup, use and storage of data and the construction of systems are also discussed. Overall, this unit concentrates upon building a firm foundation in information representation, organisation and storage with particular emphasis upon the application of database systems.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Analyse data requirements and design and develop conceptual database models.

Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.

Use data analysis and data modelling techniques and tools for introductory level database design and specification

Explain the role and nature of ethics and sustainability in the IT environment related to databases

General Assessment Information

ASSESSMENT PROCEDURE

A more detailed description of each task is given below.

Workshop Participation

Workshops are combined practicals and tutorials. Each week, you will receive a maximum of one mark for active participation in the class activities, discussions, and/or practical tasks.

Attendance alone does not count towards any mark. There are 13 weeks of workshops, however, the total participation mark is limited to 7 throughout the semester. In workshops (week 7 and 13) , you will have your in-class assessment. So, these weeks are excluded from assessed participation. All other workshops are assessed.

Participation in workshops in this unit is a **hurdle** requirement. In order to pass the unit you will be required to participate in **7 out of the 11 weeks**.

Diagnostic Quiz

This quiz will be an individual assessment; You will be attempting an online quiz that will be conducted in week 3 in the workshop you've enrolled. You will be answering questions from concepts covered in weeks 1 and 2. This quiz aims to determine students' individual strengths, weaknesses, knowledge and skills to develop a baseline of what students know about the topic. You will have to attend the workshop you're enrolled in to attempt the quiz. No reattempts will be granted.

Assignments

There are 2 assignments.

1. The first assignment requires you to apply and develop your understanding of data modelling concepts and submit a professionally presented document demonstrating the use of data modelling skills. The document must be prepared using a standard word processor such as Word and diagrams can be either hand-drawn or created using a modelling tool/website. This assignment has two parts: Part one of this assignment will be a group submission; Part two of this assignment will be an individual quiz.
2. The second assignment assesses your ability to design a database and provide interactive queries using MySQL. This assignment has two parts: Part one of this assignment will be a group submission; Part two of this assignment will be an individual quiz.

You are encouraged to:

- set your personal deadline earlier than the actual one;
- keep backups of all your important files;
- make sure that no-one else picks up your printouts.

If you cannot submit on time because of illness or other circumstances, please contact the convenor **before** the due date.

No extensions will be granted unless there is a special consideration approved. Late assignments will be accepted up to 72 hours after the submission deadline. There will be a deduction of 10%* of the total available marks made from the total awarded mark for each 24 hour period or part thereof that the submission is late (for example, 25 hours late in submission – 20% penalty). This penalty does not apply for cases in which an application for disruption to studies is made and approved.

Assignment submission in this unit is NOT a hurdle requirement. However, if you do not make a reasonable attempt at all the assignments, you are unlikely to have sufficient knowledge to pass the exam or sufficient total marks to be able to pass the unit.

Final Examination

For this unit, a final examination will test your learning and knowledge of learning outcomes #1, #2, #3 and #4. The final examination accounts for 50% of the final mark. If you receive [special consideration](#) for the final exam, a supplementary exam will be scheduled in the week of December 16-20, 2019. By making a special consideration application for the final exam you are declaring yourself available for a resit during the supplementary examination period and will not be eligible for a second special consideration approval based on pre-existing commitments. Please ensure you are familiar with the policy prior to submitting an application. Approved applicants will receive an individual notification one week prior to the exam with the exact date and time of their supplementary examination.

Regarding the examination process, note that

- you must attend all required classes and submit all required assessment, otherwise the Executive Dean of the Faculty or delegated authority has the power to refuse permission to attend the final examination.
- the University Examination period in for Second Half Year is mid November to mid December.
- you are expected to present yourself for examination at the time and place designated in the [University Examination Timetable](#).
- the timetable will be available in Draft form approximately eight weeks before the commencement of the examinations and in Final form approximately four weeks before the commencement of examinations.
- no early examinations for individuals or groups of students will be set. All students are expected to ensure that they are available until the end of the teaching semester, that is the final day of the official examination period.
- the only exception to not sitting an examination at the designated time is because of documented illness or unavoidable disruption. In these circumstances you may wish to lodge an application for special consideration.

[Standards](#)

Four standards, namely Developing, Functional, Proficient, and Advanced, summarize as many different levels of achievement. Each standard is precisely defined to help students know what kind of performance is expected to deserve a certain grade. Typically, Developing corresponds PC, Functional is for P, Proficient for Cr, and Advanced covers D and HD. The standards corresponding to the learning outcomes and criteria of this unit are given below:

Standards

Criteria for L.O. #1	Developing	Functional	Proficient	Advanced
Data Analysis and Modeling	Has limited understanding and ability to apply analysis, modeling and programming concepts and techniques. Assignment and exam performance shows functional level of understanding on some but not all assessment tasks.	Demonstrates knowledge of terms and core concepts. Assignment and exam performance shows basic understanding and ability to apply most of the data modeling and implementation concepts and techniques.	Understands most of the data modelling concepts and can apply them appropriately. Implements most of the tasks specified. Assignment and exam performance shows good understanding of data analysis and modeling concepts and application of these skills in conceptual database design.	Shows depth of understanding of data analysis and modeling concepts and implements all tasks as specified with professional presentation. Assignment and exam performance shows critical thought and comprehension of the software development big picture and related issues and activities.
Criteria for L.O. #2				
Data Base	Inaccurate reproduction of definitions and ideas, show limited understanding of database principles. Able to apply some of the basic database functionality in the assignments and final exam.	Reproduce definitions and ideas, show some breath of understanding of Database principles. Able to apply most of the basic database functionality in the assignments and final exam.	Show breath of understanding of database principles. Able to apply most of database functionality in the assignments and final exam.	Apply terminology and ideas in some new contexts, show some depth of understanding of database principles. Able to apply most of database functionality in the assignments and final exam.
Criteria for L.O. #3				
Ethics	Assessment performance shows limited understanding of what ethics is.	Assessment performance shows an understanding of what ethics involves relating to sustainability and the environment.	Assessment performance shows an appreciation of the impact of ethics on professional practice as well as ethical decision making relating to sustainability and the environment.	Assessment performance shows a deep appreciation of the impact of ethics on professional practice as well as ethical decision making relating to sustainability and the environment.
Criteria for L.O. #4				
Use of modelling tools	Assignment and exam performance shows limited understanding of data analysis and data modelling techniques and tools for introductory level database design and requirements specification.	Assignment and exam performance shows basic understanding and ability to use data analysis and modelling tools.	Assignment and exam performance shows good understanding of data analysis and modelling tools in conceptual database design.	Assignment and exam performance shows depth of understanding of data analysis and modelling tools.

Grading

In order to pass the unit, you must **obtain a total mark of 50** or higher in the unit and **obtain 7 in the participation** component. The final mark will be the summation of the marks you have received for assessments including the final exam.

For each task, those standards translate into a mark and the different component marks are added up. The final mark for the unit will be calculated by combining the marks for all assessment tasks according to the percentage weightings shown in the assessment summary. You will then be given a grade that reflects your achievement in the unit.

- **Fail (F)**: does not provide evidence of attainment of all learning outcomes. There is missing or partial or superficial or faulty understanding and application of the fundamental concepts in the field of study; and incomplete, confusing or lacking communication of ideas in ways that give little attention to the conventions of the discipline.
- **Pass (P)**: provides sufficient evidence of the achievement of learning outcomes. There is demonstration of understanding and application of fundamental concepts of the field of study; and communication of information and ideas adequately in terms of the conventions of the discipline. The learning attainment is considered satisfactory or adequate or competent or capable in relation to the specified outcomes.
- **Credit (Cr)**: provides evidence of learning that goes beyond replication of content knowledge or skills relevant to the learning outcomes. There is demonstration of substantial understanding of fundamental concepts in the field of study and the ability to apply these concepts in a variety of contexts; plus communication of ideas fluently and clearly in terms of the conventions of the discipline.
- **Distinction (D)**: provides evidence of integration and evaluation of critical ideas, principles and theories, distinctive insight and ability in applying relevant skills and concepts in relation to learning outcomes. There is demonstration of frequent originality in defining and analysing issues or problems and providing solutions; and the use of means of communication appropriate to the discipline and the audience.
- **High Distinction (HD)**: provides consistent evidence of deep and critical understanding in relation to the learning outcomes. There is substantial originality and insight in identifying, generating and communicating competing arguments, perspectives or problem solving approaches; critical evaluation of problems, their solutions and their implications; creativity in application.

Assessment Tasks

Name	Weighting	Hurdle	Due
Workshop Participation	7%	Yes	All Weeks except Weeks 7,13
Diagnostic Quiz	3%	No	Varies: During Week 3 Workshop
Assignment One Part One	10%	No	Week6 06/09/2019 Friday 21:00
Assignment One Part Two	10%	No	Varies: During Week 7 Workshop
Assignment Two Part One	10%	No	Week 12 01/11/2019 Friday 21:00
Assignment Two Part Two	10%	No	Varies: During Week 13 Workshop
Final Exam	50%	No	See Exam Timetable

Workshop Participation

Due: **All Weeks except Weeks 7,13**

Weighting: **7%**

This is a hurdle assessment task (see [assessment policy](#) for more information on hurdle assessment tasks)

In accordance with the Faculty Board they have decided that, from S1 2018, all 100-level units in the Faculty will have a compulsory (hurdle) requirement on participation in tutorials, practicals and laboratories.

You will have workshops every week starting from week 1 until week 13. **Note: Workshops start in week-1**

In-class voluntary participation will be assessed for 11 workshops during the session. The best 7 out of 11 in-class participation marks will be taken into consideration. In-class participation will be worth 7% of the the total mark. Participation in weeks 7,13 do not count towards this assessment since you will have in-class assessments during these two weeks. Attendance alone does not count towards any mark. You will have to actively participate in the workshop activities assigned to you by your tutor.

NB. This is a hurdle assessment, in order to pass the unit you will be required to score 7 out of 11 in this assessment task. If you receive any formal special consideration, you will be given an alternate task for that week. Please refer to

<https://students.mq.edu.au/study/my-study-program/special-consideration>

On successful completion you will be able to:

- Analyse data requirements and design and develop conceptual database models.
- Implement system models into databases, design and create simple databases for

business information systems and write programs to produce interactive queries.

- Use data analysis and data modelling techniques and tools for introductory level database design and specification
- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Diagnostic Quiz

Due: **Varies: During Week 3 Workshop**

Weighting: **3%**

This quiz will be an individual assessment; You will be attempting an online quiz that will be conducted in week 3 in the workshop you've enrolled. You will be answering questions covering concepts covered in weeks 1 and 2. This quiz aims to determine students' individual strengths, weaknesses, knowledge and skills to develop a baseline of what students know about the topic

On successful completion you will be able to:

- Analyse data requirements and design and develop conceptual database models.
- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.

Assignment One Part One

Due: **Week6 06/09/2019 Friday 21:00**

Weighting: **10%**

This assignment is a group assignment. You will be working in groups of three/four.

This assignment will involve both top down and bottom up approach in database modelling. You will be assessed based on the development of EER, and normalisation of tables for a given problem description. Submission will be through iLearn.

On successful completion you will be able to:

- Analyse data requirements and design and develop conceptual database models.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification

Assignment One Part Two

Due: **Varies: During Week 7 Workshop**

Weighting: **10%**

This assessment will be an individual assessment; You will be attempting a paper-based quiz that will be conducted in week 7, in the workshop you've enrolled. You will be answering

questions covering these concepts: ER, EER, logical data model and normalisation.

On successful completion you will be able to:

- Analyse data requirements and design and develop conceptual database models.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification

Assignment Two Part One

Due: **Week 12 01/11/2019 Friday 21:00**

Weighting: **10%**

This assignment is a group assignment. You will be working in groups of three/four.

This assignment will involve the design and execution of database queries to demonstrate knowledge of SQL. You will be assessed based on the successful execution of SQL queries for a given problem description. Submission will be through iLearn.

On successful completion you will be able to:

- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.

Assignment Two Part Two

Due: **Varies: During Week 13 Workshop**

Weighting: **10%**

This assessment will be an individual assessment; You will be attempting an online quiz that will be conducted in week 13, in the workshop you've enrolled. You will be answering questions on SQL

On successful completion you will be able to:

- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.

Final Exam

Due: **See Exam Timetable**

Weighting: **50%**

This closed book exam will test your knowledge of the concepts and ability to apply the learning material from weeks 1-12.

On successful completion you will be able to:

- Analyse data requirements and design and develop conceptual database models.

- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification
- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Delivery and Resources

ISYS114 is taught via lectures and workshops. The feedback that you receive also plays an important role in your learning. Make sure you read the feedback you are given, attend lectures which provide assignment feedback and compare your solution with sample solutions provided.

Lectures are used to introduce new material, provide motivation and context for your study, guide you in what is important to learn and explain more difficult concepts.

Workshops are small group classes which give you the opportunity to interact with your peers and with a tutor who has a sound knowledge of the subject. This also gives you a chance to practice your technology skills.

You have many opportunities to seek for and to receive feedback. During lectures, you are encouraged to ask the lecturer questions to clarify anything you might not be sure of. You may also arrange to meet with your tutor or the lecturer or attend the consultation hours of any tutor. Each week, you will be given activities and problems to solve in workshops. This will at times involve contributing to a group of students and presenting solutions to the class.

Both assignments involves working in groups. The comments and the solutions provided will help you to understand the material in the unit, prepare you for the work in assignments as well as for the final exam. It is important that you keep up with these problems every week. Assignments have been especially designed to deliver continuous feedback on your work.

Each week you should:

- Attend lectures, take notes, ask questions
- Attend your workshops and seek feedback from your tutor on your work
- Read assigned reading material (ideally before the lecture), add to your notes and prepare questions for your lecturer or tutor
- Start working on any assignments immediately after they have been released.

Lecture notes are made available each week but these notes are intended as an outline of the lecture only and are not a substitute for your own notes or reading of the textbook or other additional material.

Classes

Lectures

There are 2 hours of lectures per week.

1. Day Lectures: Monday 3-5pm in 21 Wally's Walk-Macquarie Theatre,
2. Evening Lectures: Tuesday 6-8 pm in 14 Sir Christopher Ondaatje Ave - Mason Theatre.

Each week you should attend two hours of lectures (or watch the recorded lecture), and a 2 hour Workshop. For details of days, times and rooms consult the [timetables webpage](#).

Note that workshops commence in week 1.

Resources to assist your learning

iLecture

Digital recordings of lectures are available through the web page of the unit on ilearn.

Textbook

Various reading materials will be provided throughout the semester

Technology

MS Word, PowerDesigner, MySQL Workbench

Websites

The web page for this unit can be found at <http://ilearn.mq.edu.au/>

Discussion Boards

The unit makes use of discussion boards hosted within iLearn. Please post questions of general interest there (for example, about assessment tasks), they are monitored by the unit staff but students may also provide answers.

Unit Schedule

In the table below, for each week, the lecturer, the topics to be covered and the textbook references are given.

Week	Lecturer	Topic	Reading/Chapter
1	Ramakrishnan	Introduction to unit and Conceptual Data Modelling	Online resources
2	Ramakrishnan	Conceptual Data Modelling	Online resources
3	Ramakrishnan	Conceptual Data Modelling	Online resources
4	Ramakrishnan	Normalisation	Online resources
5	Ramakrishnan	Logical Modelling Introduction to SQL	Online resources

6	Ramakrishnan	SQL concepts	Online resources
7	Ramakrishnan	SQL concepts	Online resources
8	Ramakrishnan	SQL concepts	Online resources
9	Smith	SQL concepts	Online resources
10	Smith	Database Application Development and Data Warehousing	Online resources
11	Smith	Data Quality and Green IT	Online resources
12	Ramakrishnan	Big Data	Online resources
13	Ramakrishnan & Smith	Revision, Exam Preparation	

Learning and Teaching Activities

Lectures

Lectures from staff in the class

Workshops

Workshops supervised by tutors to provide personalised feedback and an interactive learning environment

Assignment submission

Submission of assignments related to specific tasks

Final Examination

Assessment of individual learning

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central \(https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central\)](https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- [Academic Appeals Policy](#)
- [Academic Integrity Policy](#)
- [Academic Progression Policy](#)
- [Assessment Policy](#)

- [Fitness to Practice Procedure](#)
- [Grade Appeal Policy](#)
- [Complaint Management Procedure for Students and Members of the Public](#)
- [Special Consideration Policy](#) (**Note:** *The Special Consideration Policy is effective from 4 December 2017 and replaces the Disruption to Studies Policy.*)

Undergraduate students seeking more policy resources can visit the [Student Policy Gateway](https://students.mq.edu.au/support/study/student-policy-gateway) (<https://students.mq.edu.au/support/study/student-policy-gateway>). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit [Policy Central](http://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central) (<http://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central>).

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: <https://students.mq.edu.au/study/getting-started/student-conduct>

Results

Results published on platform other than [eStudent](#), (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcome

- Use data analysis and data modelling techniques and tools for introductory level database design and specification

Assessment tasks

- Workshop Participation
- Assignment One Part One
- Assignment Two Part One
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcome

- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Assessment tasks

- Workshop Participation
- Diagnostic Quiz
- Assignment One Part One
- Assignment One Part Two
- Assignment Two Part One
- Assignment Two Part Two
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcome

- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Assessment tasks

- Workshop Participation
- Diagnostic Quiz
- Assignment One Part One
- Assignment One Part Two
- Assignment Two Part One
- Assignment Two Part Two

- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks
- Assessment of individual learning

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

- Analyse data requirements and design and develop conceptual database models.
- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification

Assessment tasks

- Workshop Participation
- Diagnostic Quiz
- Assignment One Part One
- Assignment One Part Two
- Assignment Two Part One
- Assignment Two Part Two
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment

- Submission of assignments related to specific tasks
- Assessment of individual learning

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Analyse data requirements and design and develop conceptual database models.
- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification

Assessment tasks

- Workshop Participation
- Diagnostic Quiz
- Assignment One Part One
- Assignment One Part Two
- Assignment Two Part One
- Assignment Two Part Two
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks
- Assessment of individual learning

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative

in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Analyse data requirements and design and develop conceptual database models.
- Implement system models into databases, design and create simple databases for business information systems and write programs to produce interactive queries.
- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Assessment tasks

- Workshop Participation
- Assignment One Part One
- Assignment One Part Two
- Assignment Two Part One
- Assignment Two Part Two
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks
- Assessment of individual learning

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes

- Analyse data requirements and design and develop conceptual database models.
- Use data analysis and data modelling techniques and tools for introductory level database design and specification
- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Assessment tasks

- Workshop Participation
- Assignment One Part One
- Assignment Two Part One
- Final Exam

Learning and teaching activities

- Lectures from staff in the class
- Workshops supervised by tutors to provide personalised feedback and an interactive learning environment
- Submission of assignments related to specific tasks

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

Learning outcome

- Explain the role and nature of ethics and sustainability in the IT environment related to databases

Assessment tasks

- Workshop Participation
- Final Exam

Learning and teaching activities

Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active

participants in moving society towards sustainability.

This graduate capability is supported by:

Learning outcome
