Unit description
This is a broad-based interdisciplinary science unit which aims to present a non-technical overview of recent ideas in astrobiology, which is about the origin of life on Earth and the possibility of finding life elsewhere in the universe. The presentation is suitable for students without any science background. The unit presents an integrated view of science across a broad range of disciplines (geoscience, biology, astronomy, cosmology and organic chemistry); looks at some of the 'big questions' (such as the origin of the Universe; what is life?; are we alone?; early Earth; and the search for life on Mars and outer solar system moons); and presents science as it is actually done, not just as a set of facts.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://students.mq.edu.au/important-dates
Learning Outcomes

1. Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
2. Understanding of scientific methodology
3. Competence in accessing, using and synthesising appropriate information
4. Understanding that scientific knowledge is always advancing and changing
5. Distinguishing between complex and sometimes mutually exclusive hypotheses
6. Application of knowledge to solving problems and evaluating ideas and information
7. Capacity to present ideas clearly with supporting evidence

General Assessment Information

See unit handout.

Exam

The unit examination will be based on lectures, unit reading material, lab exercises, information you should have absorbed through completing assignments and any other material presented during classes. A printed English dictionary (not electronic) may be brought in for the exam if English is not your first language. The educational rationale for the exam is to check the acquired knowledge by the students at the end of the unit.

The University Examination period in the First Half Year 2019 is from Tuesday 11 June 2019 to Friday 28 June 2019. You are expected to present yourself for examination at the time and place designated in the University Examination Timetable. The timetable will be available in draft form approximately eight weeks before the commencement of the examinations and in Final form approximately four weeks before the commencement of the examinations.

http://www.timetables.mq.edu.au/

You are advised that it is Macquarie University policy not to set early examinations for individuals or groups of students. All students are expected to ensure that they are available until the end of the teaching session, that is, the final day of the official examination period. The only exception to not sitting an examination at the designated time is because of documented illness or unavoidable disruption. In these circumstances you may wish to consider applying for special consideration. The following is a link to the University’s special consideration policy. You are required to read this policy at the start of this session. The Special Consideration Policy is effective from December 4th 2017 and replaces the Disruption to Studies Policy. This is submitted online through www.ask.mq.edu.au.

If you receive special consideration for the final exam, a supplementary exam will be scheduled in the interval between the regular exam period and the start of the next session. By making a special consideration application for the final exam you are declaring yourself available for a resit during the supplementary examination period and will not be eligible for a second special consideration approval based on pre-existing commitments. Please ensure you are familiar with...
the policy prior to submitting an application. You can check the supplementary exam information page on FSE101 in iLearn (bit.ly/FSESupp) for dates, and approved applicants will receive an individual notification one week prior to the exam with the exact date and time of their supplementary examination.

There is a procedure for appealing against final unit grades and a mechanism for solving problems such as illness during the unit. We refer you to the University Handbook of Undergraduate Studies for details and suggest that you discuss these sorts of problems with Prof. Simon George in the first instance.

On-line quizzes

Due: Various
Weighting: 30%

On-line quizzes on lectures and practicals/tutorials

This Assessment Task relates to the following Learning Outcomes:

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding of scientific methodology
- Competence in accessing, using and synthesising appropriate information
- Understanding that scientific knowledge is always advancing and changing
- Application of knowledge to solving problems and evaluating ideas and information

Assignment 1

Due: 26/3/19, 17:00
Weighting: 15%

Assignment 1: Paper review (1,000 words approx.)

This Assessment Task relates to the following Learning Outcomes:

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
Universe
• Understanding of scientific methodology
• Competence in accessing, using and synthesising appropriate information
• Understanding that scientific knowledge is always advancing and changing
• Distinguishing between complex and sometimes mutually exclusive hypotheses
• Application of knowledge to solving problems and evaluating ideas and information
• Capacity to present ideas clearly with supporting evidence

Assignment 2
Due: **14/5/19, 17:00**
Weighting: **25%**

Assignment 2: Lander project (1,500 words min., maximum 3000)

This Assessment Task relates to the following Learning Outcomes:
• Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
• Understanding of scientific methodology
• Competence in accessing, using and synthesising appropriate information
• Understanding that scientific knowledge is always advancing and changing
• Distinguishing between complex and sometimes mutually exclusive hypotheses
• Application of knowledge to solving problems and evaluating ideas and information
• Capacity to present ideas clearly with supporting evidence

Unit exam
Due: **Session 1 Exam period**
Weighting: **30%**

Unit exam

This Assessment Task relates to the following Learning Outcomes:
• Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
• Competence in accessing, using and synthesising appropriate information
• Application of knowledge to solving problems and evaluating ideas and information
• Capacity to present ideas clearly with supporting evidence

Delivery and Resources
The Unit will be presented in 4 broad themes:

2. **Life and Rocks on Early Earth and Mars**: *(Astronomy, Geoscience)*. Formation of the Earth; Early Earth and Mars environments; The first billion years of life.

3. **Biology of Life and Habitability**: *(Biology, Astronomy, Chemistry)*. The environments of the planets; Molecular biology and predictions about the earliest organisms; Biomarkers as proxies for life.

4. **Life Elsewhere, SETI**: *(Astronomy, Chemistry, Astrobiology)*. The diverse places that life can live (Extremophiles); The chemistry of space; Extra-solar planets; Are we alone? (SETI); the FERMI paradox.

**Classes:**

Attend the two one hour lectures each week, and a one hour practical/tutorial each week.

*Lecture*: **23 Wally's Walk, T1 Theatre**, Friday 13:00-14:00 and 14:00-15:00. This will usually be two separate lectures, stopping for a 10 min break approximately half way.

*Practicals/tutorials*: **11 Wally’s Walk, 220**, 5 classes:

1. Thursday 11:00-12:00 (Practical 02)
2. Thursday 12:00-13:00 (Practical 03)
3. Thursday 15:00-16:00 (Practical 01) on hold
4. Friday 10:00-11:00 (Practical 04)
5. Friday 11:00-12:00 (Practical 06)
6. Friday 15:00-16:00 (Practical 05)

**BOTH practicals/tutorials and lectures start in Week 1** (25th February to 1st March), please come along, it is important to start straight away! Note that this first week of study is the week after O-week (18–22 Feb).

**Late enrolments**

If you enrol late in the unit, you will have already missed one or more lecture and practical/tutorial. It is your responsibility to catch up. Please contact Simon if you need Quiz 1 to be reopened.

**Lectures, availability of lecture material and attendance requirements**

It is the policy in this unit that students will normally attend the two hours of lectures per week, and one practical/tutorial, and make their own notes from the lectures. It is expected that many of
the lectures will be interactive, with questions and answers throughout. Many lectures given by Simon George will contain short, anonymous Socrative quizzes (not used for assessment), which will be used to help build understanding of key topics. These may occur at the end of a lecture, or in the middle. Go to http://www.socrative.com/ and click Student Login. Enter the unique Room Name to Join the GEOS204 Room: RMLYTDY5

Lectures will be recorded using Echo 360, and files of the lecture graphics will also be made available through iLearn. These will be particularly useful for revision purposes. Many of the practicals/tutorials are assessed, it is important that you attend one of these each week.

Hours

This is a 3 credit point unit, so total hours is 150 hours. It is anticipated that you will spend ~10 hours per week involved with the unit, including the 3-hour class contact time per week. It is particularly important that you spend plenty of time preparing the two major assignments.

Contacts and communication

Convenor: Professor Simon George
Simon.George@mq.edu.au 02 9850 4424 Office: Room 3.29, 3rd Floor, 12 Wally’s Walk, Department of Earth and Planetary Sciences (EPS), Macquarie University.

EPS Admin: Rooms 3.17 and 3.18, 3rd Floor, 12 Wally’s Walk, phone 02 9850 8426 or 02 9850 8373.

Other staff teaching on unit and guest lecturers:

A/Prof. Craig O’Neill EPS  craig.oneill@mq.edu.au
02 9850 9673 Room 1.25, 12 Wally’s Walk.

Prof. Michael Gillings Biological Sciences  michael.gillings@mq.edu.au
02 9850 8199 Room 271, 14 Eastern Road.

Prof. David Christian Modern History  david.christian@mq.edu.au
02 9850 8769 16 University Avenue, 2 South

If sending email, please include GEOS204 in the subject line. We will communicate to you mainly through your student email account/iLearn at Macquarie University. Please make sure you check this email at least weekly.

Set textbook and background reading

- This book can purchased from the Pearson website for $60 from this link as an online VitalSource eText: http://www.pearson.com.au/9780134080321
- It is also available for purchase at the university Co-op as hard copy, but is rather
It is essential that you purchase this book by the end of the first week of semester. Lectures and some practicals refer to sections of this book, many sections of which it will be necessary to read (see p. 4-5 of handout).

There may be some second-hand copies of the 3rd edition (2012) available from past students; apart from different page numbers the content is only a bit out of date (worse in some chapters, such as Exoplanets), so this is an acceptable alternative.

Also see the booklist on p. 6-7 of handout for other places to obtain information. Note that this is not a “reading list” (i.e., you are certainly not expected to read all these books), nor are most of these books on reserve. The booklist is a resource to help you find information in the library.

Some individual readings to complement the textbook will be suggested in some lectures (see p. 4-5 of handout).

Astrobiology is an interdisciplinary subject involving aspects of astronomy, cosmology, geoscience, biology and chemistry. Few students (or indeed staff!) have a background in all of these areas, so even if you have done some science units before you must expect to do a lot of extra reading and research to be able to understand all the information that will be presented in the unit. For those students without a science background (e.g. those doing it for “Planet” purposes), this breadth provides you the opportunity to become familiar with several aspects of science over the course of the unit. No prior knowledge of any science will be assumed.

Technologies used and required

Text book (see above)

Access to iLearn for quizzes and unit resources

You will use computers in some practicals/tutorials

You will need to be able to access books and journal papers in the library

You will be exposed to a variety of materials and concepts in practicals

Unit Schedule

GEOS204: Life, the Universe and Everything (2019): Schedule: see unit handout.

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central). Students should be aware of the following policies in particular with regard to Learning and Teaching:
Undergraduate students seeking more policy resources can visit the Student Policy Gateway (https://students.mq.edu.au/support/study/student-policy-gateway). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central).

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/study/getting-started/student-conduct

**Results**

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

**Student Support**

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

**Learning Skills**

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

Graduate Capabilities

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding of scientific methodology
- Competence in accessing, using and synthesising appropriate information
- Distinguishing between complex and sometimes mutually exclusive hypotheses
- Application of knowledge to solving problems and evaluating ideas and information

Assessment tasks

- On-line quizzes
- Assignment 1
- Assignment 2

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's
historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Competence in accessing, using and synthesising appropriate information
- Understanding that scientific knowledge is always advancing and changing

**Assessment tasks**

- Assignment 1
- Assignment 2

**Commitment to Continuous Learning**

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

**Learning outcomes**

- Understanding that scientific knowledge is always advancing and changing
- Distinguishing between complex and sometimes mutually exclusive hypotheses

**Discipline Specific Knowledge and Skills**

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
Assessment tasks

- On-line quizzes
- Assignment 1
- Assignment 2
- Unit exam

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding of scientific methodology
- Competence in accessing, using and synthesising appropriate information
- Understanding that scientific knowledge is always advancing and changing
- Distinguishing between complex and sometimes mutually exclusive hypotheses
- Application of knowledge to solving problems and evaluating ideas and information
- Capacity to present ideas clearly with supporting evidence

Assessment tasks

- On-line quizzes
- Assignment 1
- Assignment 2
- Unit exam

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community.
want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Competence in accessing, using and synthesising appropriate information
- Distinguishing between complex and sometimes mutually exclusive hypotheses
- Application of knowledge to solving problems and evaluating ideas and information
- Capacity to present ideas clearly with supporting evidence

**Assessment tasks**

- Assignment 1
- Assignment 2

**Effective Communication**

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding that scientific knowledge is always advancing and changing
- Application of knowledge to solving problems and evaluating ideas and information
- Capacity to present ideas clearly with supporting evidence

**Assessment tasks**

- On-line quizzes
- Assignment 1
- Assignment 2
- Unit exam

**Socially and Environmentally Active and Responsible**

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and
country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding that scientific knowledge is always advancing and changing

**Capable of Professional and Personal Judgement and Initiative**

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

**Learning outcomes**

- Understanding the origin of life on Earth and the possibility of finding life elsewhere in the Universe
- Understanding of scientific methodology
- Competence in accessing, using and synthesising appropriate information
- Understanding that scientific knowledge is always advancing and changing
- Distinguishing between complex and sometimes mutually exclusive hypotheses
- Capacity to present ideas clearly with supporting evidence

**Assessment tasks**

- On-line quizzes
- Assignment 2

**Changes from Previous Offering**

Lectures and practicals/tutorials have been re-ordered.
