General Information

Unit convenor and teaching staff Lecturer Xian Zhou xian.zhou@mq.edu.au Contact via email Room 607, 4 Eastern Road Tue 3-4pm Credit points

Credit point

Prerequisites ACST603 or (admission to MActPrac post 2014)

Corequisites ACST851 and (STAT806 or STAT810)

Co-badged status

Unit description

This unit provides sophisticated statistical and probabilistic models for survival, sickness, insurance losses and other actuarial problems based on survival data. Techniques of survival analysis are used to estimate survival and loss distributions and evaluate risk factors in actuarial applications. Methods of both nonparametric and parametric estimation are utilised. Advanced models based on Markov chains and processes will also be introduced to capture the features of stochastic transitions between different survival or loss states and to estimate the transition rates.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes

On successful completion of this unit, you will be able to:

Understand different types of survival models and their connections with practical actuarial problems.

Master the skills of statistical inference to estimate parameters and probability distributions of survival models.

Grasp the ideas and concepts of Markov properties and processes. Able to solve Markov transition probabilities via matrix theory and differential equations. Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

General Assessment Information

Extensions and penalties on coursework assessment tasks

• Tasks 10% or less – No extensions will be granted. Students who have not submitted the task prior to the deadline will be awarded a mark of 0 for the task, except for cases in which an application for special consideration is made and approved.

• Tasks above 10% - No extensions will be granted. There will be a deduction of 10% of the total available marks made from the total awarded mark for each 24 hour period or part thereof that the submission is late (for example, 25 hours late in submission – 20% penalty). This penalty does not apply for cases in which an application for special consideration is made and approved. No submission will be accepted after solutions have been posted.

Open-book final examination

• The final examination will be open-book in the sense that students can bring in any materials written or printed on paper with any size and number of pages.

Gradebook

• It is the responsibility of students to view their marks for each within session assessment on iLearn within 20 working days of posting. If there are any discrepancies, students must contact the unit convenor immediately. Failure to do so will mean that queries received after the release of final results regarding assessment marks (not including the final exam mark) will not be addressed.

• Assessment criteria for all assessment tasks will be provided on the unit iLearn site.

Supplementary exams

 Information regarding supplementary exams, including dates, is available at: http://www.businessandeconomics.mq.edu.au/current_students/undergraduate/how_do_i/ special_consideration

Name	Weighting	Hurdle	Due
Quiz	5%	No	19/03/2019
Assignment 1	20%	No	01/05/2019
Assignment 2	15%	No	05/06/2019

Assessment Tasks

Name	Weighting	Hurdle	Due
Final Exam	60%	No	Examination Period

Quiz

Due: **19/03/2019** Weighting: **5%**

Non-invigilated quiz with multiple-choice questions

On successful completion you will be able to:

• Understand different types of survival models and their connections with practical actuarial problems.

Assignment 1

Due: 01/05/2019 Weighting: 20%

Problem-solving questions requiring detailed solutions

On successful completion you will be able to:

- Understand different types of survival models and their connections with practical actuarial problems.
- Master the skills of statistical inference to estimate parameters and probability distributions of survival models.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Assignment 2

Due: **05/06/2019** Weighting: **15%**

True-False questions requiring explanations

On successful completion you will be able to:

- Grasp the ideas and concepts of Markov properties and processes.
- Able to solve Markov transition probabilities via matrix theory and differential equations.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Final Exam

Due: Examination Period

Weighting: 60%

Problem-solving questions requiring detailed solutions

On successful completion you will be able to:

- Master the skills of statistical inference to estimate parameters and probability distributions of survival models.
- Grasp the ideas and concepts of Markov properties and processes.
- Able to solve Markov transition probabilities via matrix theory and differential equations.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Delivery and Resources

Classes

- This unit is taught through 3 hours of lectures and 2 hours of tutorials per week.
- The timetable for classes can be found on the University web site at:
- http://www.timetables.mq.edu.au/
- Tutorials start in Week 2.

Unit Web Page

• The web page for this unit can be found at: http://ilearn.mq.edu.au

Technology Used and required

• You will need access to the internet to obtain course information and download teaching materials from the unit website.

• It is your responsibility to check the unit website regularly to make sure that you are upto-date with the information for the unit.

Required and Recommended Texts and/or Materials

• Lecture Notes are the required materials and will be posted on the website before the lectures.

• The main additional reading materials are the ActEd CT4 notes. This will also be used as background reading for ACST359/819.

Unit Schedule

Week 1: Principle of actuarial modelling; Probability models

Week 2: Survival analysis; Estimation of survival distributions

Week 3: Estimation of survival distributions; Variance estimation

Week 4: Variance estimation and confidence intervals

Week 5: Cox proportional hazards models

Week 6: Cox proportional hazards models; Stochastic processes

Week 7: Markov chains

Week 8: Markov chains; Markov jump processes; Assignment 1

Week 9: Markov jump processes

Week 10: Markov jump processes; Applications of Markov processes

Week 11: Applications of Markov processes

Week 12: Applications of Markov processes; Assignment 2

Week 13: Revision

Note: This is only a tentative schedule. The actual schedule will be adjusted from time to time in accordance with the progress of lectures.

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://staff.m q.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-centr al). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Grade Appeal Policy
- Complaint Management Procedure for Students and Members of the Public
- <u>Special Consideration Policy</u> (*Note: The Special Consideration Policy is effective from 4* December 2017 and replaces the Disruption to Studies Policy.)

Undergraduate students seeking more policy resources can visit the <u>Student Policy Gateway</u> (htt <u>ps://students.mq.edu.au/support/study/student-policy-gateway</u>). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit <u>Policy Central</u> (<u>http</u> s://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/p olicy-central).

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/study/getting-started/student-conduct

Results

Results published on platform other than <u>eStudent</u>, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in <u>eStudent</u>. For more information visit <u>ask.mq.edu.au</u> or if you are a Global MBA student contact globalmba.support@mq.edu.au

Student Support

Macquarie University provides a range of support services for students. For details, visit <u>http://stu</u> dents.mq.edu.au/support/

Learning Skills

Learning Skills (<u>mq.edu.au/learningskills</u>) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

Student Services and Support

Students with a disability are encouraged to contact the **Disability Service** who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au

IT Help

For help with University computer systems and technology, visit <u>http://www.mq.edu.au/about_us/</u>offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the <u>Acceptable Use of IT Resources Policy</u>. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of

knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes

- Understand different types of survival models and their connections with practical actuarial problems.
- Master the skills of statistical inference to estimate parameters and probability distributions of survival models.
- Grasp the ideas and concepts of Markov properties and processes.
- Able to solve Markov transition probabilities via matrix theory and differential equations.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Assessment tasks

- Quiz
- Assignment 1
- Assignment 2
- Final Exam

PG - Critical, Analytical and Integrative Thinking

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Understand different types of survival models and their connections with practical actuarial problems.
- Master the skills of statistical inference to estimate parameters and probability distributions of survival models.
- Grasp the ideas and concepts of Markov properties and processes.
- Able to solve Markov transition probabilities via matrix theory and differential equations.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Assessment tasks

- Quiz
- Assignment 1
- Assignment 2
- Final Exam

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcomes

- Master the skills of statistical inference to estimate parameters and probability distributions of survival models.
- Able to solve Markov transition probabilities via matrix theory and differential equations.
- Capable of integrating advanced mathematical theory and techniques of survival models into actuarial modelling and applications.

Assessment tasks

- Assignment 1
- Assignment 2
- Final Exam
