Unit description

This unit offers an introduction to medical anthropology and cross-cultural beliefs relating to illness and healing. We will examine health and illness from a multilevel perspective that explores the evolution of human disease, the role of culture in shaping epidemiology, varying cultural notions of disease causality, the individual experience of illness, and the socio-political factors that condition our experience and management of negatively-valued states of health. Throughout, the unit emphasizes that good health - and conversely ill health - is never simply a "fact" about the body. Disease and illness have social and biological origins, which means our understanding of this central fact of human life must incorporate not only biological factors, but also the broader cultural frameworks that transform mere disease into the culturally-specific experience of illness. All enrolment queries should be directed to Open Universities Australia (OUA): see [www.open.edu.au](http://www.open.edu.au)
