Unit description This unit concerns itself with the design and implementation of real-world computer networks. We consider the various layers of modern network systems design, from the physical medium, through software protocol layers to the application protocols. Technical issues inherent to each layer are examined including routing, error detection and correction, flow control, connection management, data representation and network security management. The unit requires some background in data communications or networking, so the Computing MRes advisor should be consulted before selecting this unit.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

ULO1: Demonstrate working knowledge of the key networking technologies and their interaction.

ULO2: Analyse and Design Internet Routing Architectures and demonstrate working knowledge of emerging routing paradigms through peering for large loosely connected networks.

ULO3: Design simulation and experiments to demonstrate the working of network technologies and algorithms.

ULO4: Collaborate and communicate with others in a professional setting in both written and oral form.

ULO5: Conduct professional work ethically with a high level of integrity, autonomy, and

accountability.
