Unit description This unit prepares students for the world where "data is the new oil". Numerous business case studies are treated in depth so students emerge with a clear understanding of the "unreasonable effectiveness of data". It examines big data technologies, moving from relational databases through to Hadoop and parallel processing. Along the way students will develop the skills necessary to tease data out of relational databases using SQL. Data visualisation is also a focus of the unit, which treats its analysis and design as well as its implementation using a variety of open source and commercial tools. Students will develop research methodology skills throughout the unit.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

- ULO1:** Devise programming language code for data analytics and visualisation using a variety of computer tools.
- ULO2:** Formulate SQL language approaches to relational database problems.
- ULO3:** Assemble statistical learning techniques to tackle data science problems.
- ULO4:** Examine and employ a variety of data visualisation techniques.
- ULO5:** Evaluate various popular data visualisation solutions.
- ULO6:** Evaluate and critique a debate in data science and visualisation.
