### Unit description

This unit builds on the basic anatomy taught in HLTH108. The regional anatomy of the head, neck and trunk is examined in detail. The unit utilises an integrated approach within which relevant gross anatomy, histology and embryology are studied. It is clinically oriented and focuses on surface and applied anatomy. The unit includes a significant practical component in which prosected cadavers, models, medical images, surface anatomy and clinical cases are studied. Students are expected to show an appreciation and respect for those who have bequeathed their bodies to science.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

**ULO1:** Demonstrate a comprehensive understanding of the anatomy of the head, neck and trunk.

**ULO2:** Describe and identify the structure and function of the bones, joints, muscles, venous and lymphatic drainage as well as nerve and bloody supply of the head, neck, and trunk.

**ULO3:** Contextualise embryological development and age-related changes which occur in the structure and function of the head, neck and trunk.

**ULO4:** Articulate anatomical knowledge of the head, neck and trunk as well as critical thinking to thoroughly evaluate theoretical clinical case studies.

**ULO5:** Apply anatomical knowledge and terminology to assess, interpret and explain radiographic, MRI and CT images of the head, neck and trunk.

**ULO6:** Communicate and demonstrate an appreciation for and respect of people who choose to bequeath their body for research or teaching purposes.
