Unit description

Around the world and across time, human cultural variation has extended into the depths of the human psyche, shaping different ways of being human. Are we all the same or do the ways we treat emotion, conflict, social interaction, cognition, and other dimensions of life result in differences among people? Psychological anthropology has traditionally focused on such themes, investigating the cultural dimensions of self, personality, cognition, emotion, normalcy and deviance, seeking to understand both the variant and universal features of human emotional, cognitive, and social life. In reading a wide range of historical and contemporary works that point toward a nuanced view of cultural actors and institutions that is neither psychologically reductionistic nor socially determined. Some of the core issues covered include: How does culture "build" people with highly-localised systems of meaning, feeling, and morality? Relationships between culture and subjective experience. How do shared cultural meanings become personalised or "subjectified" by individuals? In what ways does culture shape cognition and feeling? What is the role of language in conditioning cognition? Are there dimensions of subjectivity that exist before, or independent from, cultural shaping? And if so, how do we account for their function in the lifeworlds of social groups?
