Unit description

The objective of this unit is to provide an understanding of pollution prevention fundamentals, featuring examples and case studies from different industries. It includes methods of waste minimization, energy and water conservation, and green engineering. The units include topics of contaminant sources identification and assessment, waste characterization, process intensification, process and product life cycle assessment, control of fugitive emissions, and environmental risk assessment and management.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

ULO1: Articulate the critical nature of pollution prevention, and provide an advanced review of what pollution prevention is and how it is implemented.

ULO2: Model and analyse the environmental impacts of process and product using a life cycle approach.

ULO3: Evaluate and improve manufacturing processes for waste minimization.

ULO4: Develop and review appropriate environmental risk management strategies.

ULO5: Research and proficiently communicate technical information to specialist and

non-specialist audiences.
