Unit description

In this unit, students are introduced to the concept of clinical problem solving and differential diagnosis. It aims to provide students with the knowledge and skills to assess the health status of a patient. Using this information, possible problems that may exist for that patient can then be outlined. This unit focuses on diagnosis from a 'symptom' and 'sign' based approach, where students will analyse the information given, and hence formulate a differential diagnosis.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

## Learning Outcomes

On successful completion of this unit, you will be able to:

**ULO1:** Describe the principles and purpose of the diagnostic process.

**ULO3:** Formulate differential diagnoses, based on history and examination findings.

**ULO2:** Explain the relationship between the clinical presentation of a patient, the underlying disease processes, and the diagnostic process.

**ULO4:** Demonstrate an understanding of the inter-professional nature of health care, the need for various investigations in the diagnosis of pathological conditions and the role of referral.
