Credit points
10

Prerequisites
Admission to MChiroprac and (CHIR3106 or CHIR316) or (CHIR6110 or CHIR602) and
(CHIR6111 or CHIR603) and (CHIR6302 or CHIR604) and (CHIR6303 or CHIR605) and
(CHIR6410 or CHIR606) and (CHIR6510 or CHIR608)

Corequisites

Co-badged status

Unit description
This unit introduces you to common neurological and orthopaedic conditions. A variety of
Teaching methods are employed, from lectures based on current evidence that are also made
available online, to tutorials that are underpinned by a social constructivist approach to
building knowledge, using the discussion of case studies to develop diagnostic skill. You will
develop competency in neurological and orthopaedic examination and in developing a
differential diagnosis based on the patient's signs and symptoms at clinical presentation. The
knowledge and skills acquired during this unit are fundamental for diagnostic competence in
chiropractic practice.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are
available at https://students.mq.edu.au/important-dates
Learning Outcomes

On successful completion of this unit, you will be able to:

ULO1: Perform the clinical neuromusculoskeletal history taking and examination competently

ULO2: Draw on acquired theoretical knowledge in order to tailor the physical examination to the clinical presentation of the patient, and from this develop a differential diagnosis and clinical management plan.

ULO3: Use clinical reasoning skills to determine conditions that are suitable or contraindicated in chiropractic care.

ULO4: Find, select and critique appropriate literature to direct clinical diagnosis and management. Use acquired knowledge to evaluate conditions, research these cases further using appropriate reference material and communicate findings.

ULO5: Participate in practical sessions in which the knowledge acquired from texts and lectures is applied in a group situation. Reason, question and communicate your understandings to each other and your tutors.

ULO6: Develop a respect and empathy for patients, and an ethical and professional attitude to health care. In this regard, you should develop a commitment to remain informed and up-to-date in your profession.

Assessment Tasks

Coronavirus (COVID-19) Update

Assessment details are no longer provided here as a result of changes due to the Coronavirus (COVID-19) pandemic.

Students should consult iLearn for revised unit information.

Find out more about the Coronavirus (COVID-19) and potential impacts on staff and students.

General Assessment Information

Assessment Tasks Description

1. Orthopaedic Assignment: Students are to work in groups of maximum five students to critique a systematic review and meta-analysis of a specific intervention for a musculoskeletal condition.

2. OSCE: These will assess your competency in performing the neurological and orthopaedic examinations.
3. **Final examination**: This will cover the content of each strand for the entire semester. It tests your knowledge of the theory, and the ability to connect that knowledge to real life situations (e.g. case studies, clinical presentations). It will consist of a 3 hour written exam with multiple choice questions, short answer questions and case studies.

### Delivery and Resources

#### Coronavirus (COVID-19) Update

Any references to on-campus delivery below may no longer be relevant due to COVID-19. Please check here for updated delivery information: [https://ask.mq.edu.au/account/pub/display/unit_status](https://ask.mq.edu.au/account/pub/display/unit_status)

#### Delivery mode

This unit is characterised by a moderate degree of flexibility. It incorporates a variety of learning tools and media. It will comprise:

<table>
<thead>
<tr>
<th>Strand 1 - Orthopaedics</th>
<th>Strand 2 – Neurology</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lectures</td>
<td>1-2 × 2 hour lectures per week</td>
<td>1-2 × 2 hour lectures per week</td>
</tr>
<tr>
<td>Lecture 1: Monday 3pm-5pm (14SCO-T2), weeks 1-12</td>
<td>Lecture 1: Tuesday 10am-12 am, 14SCO-T2, weeks 1-12</td>
<td></td>
</tr>
<tr>
<td>Lecture 2: Wednesday 9am–11am (14SCO-T2), weeks 3-11, 13</td>
<td>Lecture 2: Wednesday 9am–11am (14SCO-T2), weeks 1, 2, 12</td>
<td></td>
</tr>
<tr>
<td>Tutorials</td>
<td>1 × 2 hour tutorial class per week, weeks 2 – 12</td>
<td>1 × 2 hour tutorial class per week, weeks 2 – 12</td>
</tr>
<tr>
<td>Thursday 9-11am or 11am-1pm (11WW 330 South Lab)</td>
<td>Wednesday 2-4pm or 4-6pm (11WW 330 South Lab)</td>
<td></td>
</tr>
<tr>
<td>Other</td>
<td>1-2 hours per week revision, self-instructional learning and readings</td>
<td>1 - 2 hours per week revision, self instructional learning and readings from the text</td>
</tr>
</tbody>
</table>

Please note that the venues are subject to change until just before the start of the semester. So, for further details on class time and locations for this unit follow the link below:

Unit Web Page

You can log in to iLearn System via the link listed below:

https://ilearn.mq.edu.au/login/MQ/

All lecture materials will be posted on ilearn, and there is also a link to ECHO360 for audio recordings and livestreaming of the lectures.

Required and recommended resources

Strand 1: Orthopaedics

Notes are summarised under ‘Lectures’ on iLearn for CHIR 8501

Required:

Recommended Reading

NOTE: Weekly tutorial case reports, clinimetric tools, and readings will be made available through iLearn.

Strand 2: Neurology

Required:

1. CHIR8501 - Neurology Tutorial Course Manual 2020– This has been uploaded to iLearn. Please be sure to either download, print and bind the manual, or have an ipad or laptop
Recommended:

Required Diagnostic Equipment (Neurological Diagnosis Kit):

1. A diagnostic set with otoscope and ophthalmoscope (Welsh Allen series 97200-BI recommended - ~$515)
2. A tailor’s measuring tape
3. A 128Hz or 256Hz (vibration) and also a 512Hz (auditory) tuning fork (Al weighted)
4. Neurotips (no sewing pins or pinwheels allowed strictly by WHS/Biosafety regulations)
5. Large stem ear buds
6. Disposable tongue depressors
7. Tomahawk reflex hammer
8. A number of tactile items e.g. key, coin etc
9. A compass:

A note about textbooks:

Textbooks for this unit can be purchased online from Booktopia [https://www.booktopia.com.au/coop](https://www.booktopia.com.au/coop). The list of Macquarie University S1 2020 units and texts can be found on the Booktopia website.

Unit Schedule

**Coronavirus (COVID-19) Update**

The unit schedule/topics and any references to on-campus delivery below may no longer be relevant due to COVID-19. Please consult iLearn for latest details, and check here for updated delivery information: [https://ask.mq.edu.au/account/pub/display/unit_status](https://ask.mq.edu.au/account/pub/display/unit_status)

Strand 1: Orthopaedics
A systematic approach will be applied to the regional diagnosis of common lumbopelvic and lower extremity conditions. The primary outcome is the ability to form a clinical impression (working diagnosis) for various patient presentations, including physical appearance, clinical history taking, physical examination and review of additional diagnostic information from paraclinical studies e.g. X-ray.

A review of anatomy and biomechanics (affirmation of assumed knowledge) of the lower extremity regions (hip/thigh, knee/leg, ankle/foot) will precede dialogue of lower extremity conditions/pathologies. The aspects of each condition/pathology will include: epidemiology, aetiology, pathogenesis and diagnosis and prognosis. The management (including therapeutic intervention) of lower extremity conditions will be not be covered in great depth and is intended only to provide detail for the natural history of each condition. Conditions of the lower extremity by region will include:

- Trauma (fractures, dislocations and soft tissue tears)
- Joint instability and arthritides (including capsular patterns of limitation)
- Congenital and developmental anomalies
- Overuse injuries
- Common sports injuries
- Entrapment neuropathies of the lower extremity

The assessment of the lower extremity regions will include:

- History and observation
- Clinimetrics
- Static palpation including borders of triangles etc.
- Range of motion assessment (active and passive range of motion and resisted isometric movements)
- Orthopaedic special tests (OSTs)
- Discussion of neurological, vascular and functional assessment along with discussion of relevant paraclinical procedures for each condition

**TIMETABLE**

**Orthopaedics Timetable**

**Strand 2: Neurology**

A number of topics are covered that relate to common patient neurological presentations. The aetiology, clinical presentation (symptoms and signs), relevant neuroscience and neuropathology, and latest research, are revised and discussed. Students develop the skill of differential diagnosis. Clinical neurological examination is taught in tutorials. The lectures cover the neurological examination from a theoretical perspective and evaluate the diagnostic test accuracy and clinimetric aspects of examination, as well as provide the depth of theory required for strong differential diagnosis. A strong component of this course is the evaluation of history taking, neurological testing and differential diagnosis through case studies and OSCEs.

**Topic 1: Neurodynamic testing (“nerve tension tests”) and mobilisation techniques**

Students acquire skills in the competent practical application of upper and lower limb neurodynamic tests and mobilisation techniques.

**Topic 2: Pain**
The pain sensory pathways and the pain suppression pathways are revised. The research on chronic pain is discussed, and the differences among acute physiological nociceptive pain, pathophysiological nociceptive pain and neuropathic pain are analysed. Common pain presentations, prognosis and management are discussed.

**Topic 3: Altered cognition**

Some of the conditions that result in cognitive impairment and altered thought processing are explored and the red flag conditions are highlighted. The discussion includes cognitive impairment, memory loss, dementia, brain trauma, acute confusional states and seizures. The mental status examination is fully elaborated.

**Topic 4: Psychiatric disorders**

The basis of the classification of psychiatric disorders and an overview of major classified conditions are discussed and critiqued.

**Topic 5: Seizures**

Seizures are classified and each type is discussed with regard to aetiology, pathophysiology, clinical manifestations and diagnosis.

**Topic 6: Eye presentations**

Common eye problems are explored, including extraocular eye muscle palsies, strabismus, decreased visual acuity, reduced visual fields and abnormal fundal findings on ophthalmic examination. The integration among visual input, proprioception and vestibular input for control of posture, movement and balance is discussed, and the postulated functional consequences of deficits in this integration are explored.

**Topic 7: Hearing and balance presentations**

The common presentations of hearing loss are discussed. The multisensory integration in vestibular processing is explored and its importance in gaze stabilisation, head orientation and posture during movement. The vestibular-ocular pathways are revisited, and the vestibular reflexes are covered. The possible causes, mechanisms, clinical presentation and neurological testing for vertigo are outlined. The differential diagnoses for central and peripheral vertigo are discussed, and the evidence for abnormal cervical proprioceptive input as a cause for dizziness is considered. Management of common conditions is discussed.

**Topic 8: Cerebrovascular disease and Neoplasms**

The blood supply of the nervous system is revised. The cascade of biochemical events that occur following cerebral ischaemia is discussed, and the consequent functional losses are covered. The clinical manifestations and diagnostic evaluation of cerebrovascular accident/stroke (thrombotic, embolic, haemorrhagic, lacunar) are discussed.

The classification, common location, clinical manifestations and prognosis of intracranial tumours are discussed.
Topic 9: Lesions of the Spinal Cord and localisation of the lesion

The sensory and motor pathways in the spinal cord are revised. Spinal cord trauma is an area of focus, and the causes and consequences (including initial spinal cord shock and autonomic hyper-reflexia) are described. History taking, neuroexamination and clinical differentiation between upper and lower motor neuron lesions are discussed. Weakness patterns and localisation of the lesion are described, and presentations of common lesions, and their differential diagnoses are reviewed.

Topic 10: Common Lesions of the Nervous System

The aetiology, symptoms and signs and differential diagnosis of common central and peripheral lesions of the nervous system are covered. Neuronal damage, the classification of nerve injury, plasticity, regeneration and neurogenesis are reviewed.

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Grade Appeal Policy
- Complaint Management Procedure for Students and Members of the Public
- Special Consideration Policy (*Note: The Special Consideration Policy is effective from 4 December 2017 and replaces the Disruption to Studies Policy.*)

Students seeking more policy resources can visit the Student Policy Gateway (https://students.mq.edu.au/support/study/student-policy-gateway). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit Policy Central (http://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central).
Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/study/getting-started/student-conduct.

Results

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

Student Support

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to help you improve your marks and take control of your study.

- Getting help with your assignment
- Workshops
- StudyWise
- Academic Integrity Module

The Library provides online and face to face support to help you find and use relevant information resources.

- Subject and Research Guides
- Ask a Librarian

Student Enquiry Service

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au

Equity Support

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.
When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](https://unitguides.mq.edu.au/unit_offers/123640/unit_guide/print). The policy applies to all who connect to the MQ network including students.

**Changes from Previous Offering**

A greater emphasis will be placed on case studies during tutorials, with the use of the Chiropractic Decision Aid, The Clinical Decision Framework. This tool is used in a number of units in the Master of Chiropractic degree. Tutorials will also include the role playing of case studies.
