Unit description

Almost every use of land from building a family home to infrastructure projects across cities through to coal mining will require some form of legal assessment and approval. The relevant area of law is environmental planning law. This unit examines the intersection of economic, social and environmental issues in the context of land use and law. The focus is on both the natural and built environment in an urban and rural context with particular emphasis on the regulation of land use under the Environmental Planning and Assessment Law 1979 (NSW) and the Environment Protection and Biodiversity Conservation Act 1999 (Cth). The unit provides a detailed analysis of the legal requirements of land use planning instruments, development assessment methods, environmental impact assessment and administrative decision making relating to land use. A critical analysis is undertaken of the effectiveness of the current regulatory regime including reform proposals and options. Discussion and analysis of relevant case law and the functions of the Land and Environment Court in terms of resolving land planning and development issues is covered extensively.
