Unit description The aim of this unit is to provide a strong mathematical and conceptual foundation in the methods of statistical inference, with an emphasis on practical aspects of the interpretation and communication of statistically based conclusions in health research. Unit contents: Review of the key concepts of estimation, and construction of Normal-theory confidence intervals; frequentist theory of estimation including hypothesis tests; methods of inference based on likelihood theory, including use of Fisher and observed information and likelihood ratio; Wald and score tests; an introduction to the Bayesian approach to inference. Because of the multi-institutional nature of the BCA units, there is an early cut-off for enrolment in this unit, which is typically one week before the start of the session. Please contact the program coordinator for details.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

- ULO1:** Write a likelihood function
- ULO2:** Derive and calculate the maximum likelihood estimate
- ULO3:** Derive and calculate the expected information
- ULO4:** Calculate and interpret p-values, power and CIs correctly
- ULO5:** Derive a Wald test, Score test, and likelihood ratio test
- ULO6:** Use a Bayesian approach to derive a posterior distribution
- ULO7:** Calculate and interpret posterior probabilities and credible intervals

ULO8: Apply and explain an exact method, non-parametric and sampling-based method
