Unit description

Human beings are fundamentally social creatures who depend on one another for their survival and well-being, both physical and psychological. Everyone is born with powerful needs for love, friendship and belonging; similarly, we fear and avoid rejection, loneliness and the disapproval of others. Despite the central role they play in our lives, however, developing and maintaining happy and healthy relationships with family members, spouses, friends and even workmates is not easy, and professional psychologists spend the bulk of their time dealing with clients' relationship problems. This unit examines a variety of relationship topics from a social psychological perspective including attraction, love- and mate selection; kinship, friendship and enemyship; jealousy, betrayal and forgiveness; communication, conflict and aggression; and the processes involved in relationship breakdown and repair. Throughout, there is a strong emphasis on critically examining so-called 'pop' psychological approaches to relationships, and students are encouraged to examine the complexities of relationship structures and processes from different cultural perspectives.
