Unit description

This unit involves the study of how humans grow and change across the life span from conception until death. The unit consolidates and extends topics introduced in the developmental section of PSYX1105. We explore developmental continuities and changes that are normative and common to most people, but also ways in which people differ from one another. In particular we focus on theories that seek to explain development and the extent to which development is influenced by genes, the physical environment, social relationships, and the context in which the individual lives. We survey major theories, research findings, and contemporary issues in physical, cognitive, social-emotional, and personality development across the life span. The tutorial sessions complement the lectures and focus on developmental research methodologies and practical applications of developmental theory.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

- ULO1:** Recall, recognise and describe key concepts of the major developmental theories.
- ULO2:** Describe the processes of development from conception through pregnancy, childhood, adolescence and adulthood.
- ULO3:** Apply developmental theories to various real-life scenarios to explain or predict observed human behaviour at different stages across the lifespan.
- ULO4:** Collect, integrate and critically evaluate a body of developmental research literature on a specified developmental topic.

Assessment Tasks

Name	Weighting	Hurdle	Due
Final Examination	50%	No	Final Exam
