Disclaimer
Macquarie University has taken all reasonable measures to ensure the information in this publication is accurate and up-to-date. However, the information may change or become out-dated as a result of change in University policies, procedures or rules. The University reserves the right to make changes to any information in this publication without notice. Users of this publication are advised to check the website version of this publication [or the relevant faculty or department] before acting on any information in this publication.

Notice
As part of Phase 3 of our return to campus plan, most units will now run tutorials, seminars and other small group activities on campus, and most will keep an online version available to those students unable to return or those who choose to continue their studies online.

To check the availability of face-to-face activities for your unit, please go to timetable viewer. To check detailed information on unit assessments visit your unit’s iLearn space or consult your unit convenor.
General Information

Unit convenor and teaching staff

Unit description
This unit outlines molecular principles underlying today's developments in protein science and biomedical research. As well as detailing modern separation technologies, the course addresses structural biology, protein analysis and bioinformatics. Practices common in the biotechnology and pharmaceutical industries to isolate recombinant proteins are emphasized. Analysis methods are introduced in relation to proteomics, genomics and biochemical research. Molecular properties leading to the 3D shape of proteins are detailed and contemporary structure methods outlined.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://students.mq.edu.au/important-dates

Learning Outcomes
On successful completion of this unit, you will be able to:

ULO1: Design appropriate procedures for isolating and handling proteins
ULO2: Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
ULO3: Utilise contemporary web tools for protein analysis
ULO4: Describe protein topology forms and architectures, and recognise how these are
encoded within a primary sequence

**ULO5**: Extract and interpret information from literature sources concerning proteins

## General Assessment Information

Details of how assessments operate may be found in iLearn.

## Assessment Tasks

### In class quizzes

- **Assessment Type**: Quiz/Test
- **Indicative Time on Task**: 25 hours
- **Due**: **Weeks 5, 10, 12 at beginning of second lecture**
- **Weighting**: 40%

Short answer quizzes for continual assessment

On successful completion you will be able to:

- Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
- Describe protein topology forms and architectures, and recognise how these are encoded within a primary sequence

### Protein Production Practical

- **Assessment Type**: Lab report
- **Indicative Time on Task**: 10 hours
- **Due**: **4 pm Friday week 8**
Weighting: 15%

Follow the procedures for preparation and isolation of a protein, and analyse the characteristics of your sample.

On successful completion you will be able to:

- Design appropriate procedures for isolating and handling proteins
- Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
- Utilise contemporary web tools for protein analysis

“Pet Protein” Model and Seminar
Assessment Type 1: Creative work
Indicative Time on Task 2: 20 hours
Due: Week 13 during your assigned class
Weighting: 20%

Research the literature concerning the 3D structure and structure determination method for your assigned protein. Construct a model that shows the three-dimensional shape of this macromolecule, and present this in a class presentation.

On successful completion you will be able to:

- Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
- Utilise contemporary web tools for protein analysis
- Describe protein topology forms and architectures, and recognise how these are encoded within a primary sequence
- Extract and interpret information from literature sources concerning proteins

"Pet Protein" Sequence Analysis & Purification
Assessment Type 1: Case study/analysis
Indicative Time on Task 2: 15 hours
Due: 4 pm Friday week 7 end of class
Weighting: 15%

Each student will be assigned a protein of industrial/medical importance as a case study throughout this Unit. You will conduct a literature search to discover the purification procedures historically used to isolate this protein, and report on the background chemistry underlying these
On successful completion you will be able to:
  • Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
  • Utilise contemporary web tools for protein analysis
  • Extract and interpret information from literature sources concerning proteins

Molecular graphics
Assessment Type 1: Lab report
Indicative Time on Task 2: 10 hours
Due: 4 pm Friday week 11
Weighting: 10%

You will use molecular graphics (program PyMOL) to view the 3D structure of a GTP-ase protein to understand its binding and function.

On successful completion you will be able to:
  • Demonstrate a chemical understanding of proteins (gene products), in vivo and in vitro
  • Describe protein topology forms and architectures, and recognise how these are encoded within a primary sequence
  • Extract and interpret information from literature sources concerning proteins

1 If you need help with your assignment, please contact:
  • the academic teaching staff in your unit for guidance in understanding or completing this type of assessment
  • the Learning Skills Unit for academic skills support.

2 Indicative time-on-task is an estimate of the time required for completion of the assessment task and is subject to individual variation

Delivery and Resources
This unit has a diverse range of carefully designed activities to enable you to achieve the learning outcomes. It is a Masters-level unit which can only successfully be completed if you take responsibility for your own learning.

Lectures: the lecture content is provided on-line. There will be a Q&A session scheduled each
week for you to ask and answer questions. If you can't answer each other's questions, the unit convenor may be able to. If not, 'homework' for the next session will be to answer the unanswered questions. Your participation in the Q&A sessions is not directly assessed, however, your ability to discuss concepts verbally will directly enhance your written assessed work. Please come to the Q&A sessions prepared to show your face and talk. The Convenor will note who contributes and it will help her understand how you think when she reads your submitted assessments.

You will only really benefit from the Q&A sessions if you have done the pre-listening and ideally some extra reading. Your success in this unit will be directly proportional to the effort you put into it. For nearly all of you, your enjoyment will also increase with your effort.

Quizes: the quizzes have been designed to remind you to keep up to date with material in this unit as it is all about building levels of experience.

Workshops and practicals: Molecular Sciences is a practical-based subject but also requires increasing amounts of data analysis, modelling and literature reading. The tasks have been designed to help you gain these skills. It is generally the case that the independence required for this unit feels intimidating at first but once you launch yourself if will be very satisfying. A pet protein will be assigned to you but if you have a passion for another one the please discuss this with the unit convenor. The key things being assessed here are your ability to undertake technical tasks (experimental and theoretical) and to communicate the outcomes.

Some students are unable to be present on campus and will join their groups remotely. If you need to take this unit remotely, you will have to convince the unit convenor that your circumstances are such that this is the only possibility. As remote learning in this unit is much less effective than face-to-face learning, a very convincing reason will be required.

**Policies and Procedures**

Macquarie University policies and procedures are accessible from [Policy Central](https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Grade Appeal Policy
- Complaint Management Procedure for Students and Members of the Public
- Special Consideration Policy (Note: The Special Consideration Policy is effective from 4 December 2017 and replaces the Disruption to Studies Policy.)
Students seeking more policy resources can visit the Student Policy Gateway (https://students.mq.edu.au/support/study/student-policy-gateway). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central).

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/admin/other-resources/student-conduct

**Results**

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

**Student Support**

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

**Learning Skills**

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to help you improve your marks and take control of your study.

- Getting help with your assignment
- Workshops
- StudyWise
- Academic Integrity Module

The Library provides online and face to face support to help you find and use relevant information resources.

- Subject and Research Guides
- Ask a Librarian

**Student Enquiry Service**

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au

**Equity Support**

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.
IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.
