Session 2 Learning and Teaching Update

The decision has been made to conduct study online for the remainder of Session 2 for all units WITHOUT mandatory on-campus learning activities. Exams for Session 2 will also be online where possible to do so.

This is due to the extension of the lockdown orders and to provide certainty around arrangements for the remainder of Session 2. We hope to return to campus beyond Session 2 as soon as it is safe and appropriate to do so.

Some classes/teaching activities cannot be moved online and must be taught on campus. You should already know if you are in one of these classes/teaching activities and your unit convenor will provide you with more information via iLearn. If you want to confirm, see the list of units with mandatory on-campus classes/teaching activities.

Visit the MQ COVID-19 information page for more detail.

Prerequisites
(BIOL2230 or BIOL257) or (20cp from (BIOL1110 or BIOL115) and ((BIOL1210 or BIOL108) or (BIOL1310 or BIOL114) or (BIOL1320 or BIOL122) or (BIOL1610 or BIOL116))) or ((PSYU1104 or PSYC104 or PSYU1101) and (PSYU1105 or PSYC105 or PSYU1102)) or ((ANAT1001 or HLTH108) and (ANAT1002 or HLTH109))

Corequisites

Co-badged status

Unit description
This unit considers the maintenance of body homeostasis. We investigate the cardiovascular system including an examination of the electrical and mechanical functions of the heart, its interaction with the blood vessels, and the hormones and the autonomic nervous system that control heart function. Next we study the role of the renal system in the control of the chemical composition of the body, water balance and body fluid volume. An overview of the respiratory system and the gastrointestinal systems will follow. Practical classes involve measuring physiological parameters such as blood pressure and electrical conduction through the heart (the ECG) in humans.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes
On successful completion of this unit, you will be able to:

ULO1: Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
ULO2: Relate specific structural features of organs to essential system functions

https://unitguides.mq.edu.au/unit_offerings/133125/unit_guide/print
ULO3: Interpret physiological processes using equations of physical, chemical, and electrical properties

ULO4: Analyse data, and synthesise and communicate the implications of experimental results

ULO5: Perform experiments safely with human subjects and accurately collect data, demonstrating adherence to Macquarie University Human Research Ethics Committee sanctioned protocols

ULO6: Identify situations in which organ systems interact to produce a co-ordinated response

General Assessment Information

Please note that this unit cannot be completed fully online. It will run online in August and September 2021 but experimental activities will run on-campus in October-November 2021.

Assessment details

A hurdle requirement is an activity for which a minimum level of performance or participation is a condition of passing a unit. The hurdle requirement in BIOL2220 in 2021 is that you must complete and submit all three practical assignments.

Assignment due dates and marks

Practical classes and assignments

Practical classes will run in mixed mode (online and on-campus). Online will be delivered by Zoom. For weeks 2-9 practicals will be offered online. In weeks 10-12 you will be able to come on campus and perform all practical aspects of the practicals. You will find detailed information concerning online and on-campus sessions (for internals and externals) on iLearn. You will be assigned a practical time slot and you are expected to attend all practical classes. There are written assignments associated with the ECG, Cardiovascular System (Posture) and the Permeability practical classes. There will also be an online quiz that will include the content of the Digestion practical.

The details of each of the three practical assignments are in the practical manual which can be accessed through iLearn. The completed assignments must be submitted to Turnitin by 11.59 on due dates seen in the table above. No paper copies will be accepted.

Mid-semester Test

This test will include 35 multiple choice questions to be completed in 50 minutes. All of the cardiovascular section, the first three renal lectures (lectures 1-12) and the material presented in the completed practical classes may be included in the test. You must complete the test individually. During the test you will see only one question at a time. You will have only one chance to answer each question. You may not go back in the quiz to correct any answers. Think carefully before answering and budget your overall time carefully.

Online quizzes

All eight quizzes are in the form of multiple choice questions and will be available from 1pm on the Thursday until Wednesday midnight of the following week. The time limit to complete each quiz will vary with the number of questions. Only one attempt at each quiz is allowed. Similar to the mid-semester test you will see only one question at a time. You will have only one chance to answer each question. You may not go back in the quiz to correct any answers. Think carefully before answering and budget your overall time carefully.

**Practical class assignments**
Assessment Type: Lab report
Indicative Time on Task: 16 hours
Due: see assessment information
Weighting: 15%
This is a hurdle assessment task (see assessment policy for more information on hurdle assessment tasks)
There are three assignments based on practical classes. These are to be completed in the week following the practical, and submitted to Turnitin. This is a hurdle and students have to submit all three assignments to be able to pass the unit.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Analyse data, and synthesise and communicate the implications of experimental results
- Perform experiments safely with human subjects and accurately collect data, demonstrating adherence to Macquarie University Human Research Ethics Committee sanctioned protocols
- Identify situations in which organ systems interact to produce a co-ordinated response

Eight online quizzes

Assessment Type 1: Quiz/Test
Indicative Time on Task 2: 8 hours
Due: see assessment information
Weighting: 20%

A number of online quizzes will be undertaken throughout the semester.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Relate specific structural features of organs to essential system functions
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Analyse data, and synthesise and communicate the implications of experimental results

Final Exam

Assessment Type 1: Examination
Indicative Time on Task 2: 3 hours
The final exam will be held in the formal examination period, and will be based on all lecture and practical material.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Relate specific structural features of organs to essential system functions
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Analyse data, and synthesise and communicate the implications of experimental results
- Identify situations in which organ systems interact to produce a co-ordinated response

Mid-semester test

Assessment Type: Quiz/Test
Indicative Time on Task: 3 hours
Due: week 7 for internals; 2nd of October 2021 for externals
Weighting: 15%

A mid-semester test will be undertaken online before the mid-semester break.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Relate specific structural features of organs to essential system functions
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Identify situations in which organ systems interact to produce a co-ordinated response

1 If you need help with your assignment, please contact:

- the academic teaching staff in your unit for guidance in understanding or completing this
type of assessment
  • the **Learning Skills Unit** for academic skills support.

Indicative time-on-task is an estimate of the time required for completion of the assessment task and is subject to individual variation

**Delivery and Resources**

**Lectures and practicals**

There will be two lectures each week. Because of the need for social distancing there can sadly be no on-campus lectures for Systems Physiology this semester. Each week’s lectures will be made available through ECHO on the iLearn site by 10am Monday at the start of each week of semester.

Practical classes begin in week two. These will also operate remotely and be accessible online. Practical classes run for a maximum of 3 h. Classes are 2 pm on Mondays, or 10 am and 2 pm on Tuesdays, or 10 am and 2 pm on Wednesdays. When you enroll in the unit you will be assigned to one of these sessions for your practical class. Zoom links will be added to iLearn and it is important that you attend the online practical in your allotted time so that we can balance the student load across the classes.

You will find online lectures in ECHO on an “Introduction to Neurophysiology” and the “Autonomic Nervous System”. The background information contained in these lectures is required for understanding of concepts introduced in BIOL2220 so it is essential that all students who have not completed BIOL257 study these lectures in week one. These lectures will also be a helpful revision tool for students who have completed BIOL257.

**Unit Material and Textbooks**

The textbook for this unit is “Principals of Human Physiology” by Cindy L Stanfield, published by Pearson. You can subscribe to the new digital version (6th addition) at

and you do not need MyLab/Mastering.

**iLearn**

Your iLearn site will contain everything you need for this course, including discussion forums and class announcements. You should check this site regularly. You should also check your university email regularly for important announcements.

**Past exam papers, and the final exam in 2021**

The final exam will take place on-campus unless further instructions are given that it should run online. To help you prepare for the final exam you may wish to look at past exam papers. These can be accessed from the library using this link.
Unit Schedule

Lecture schedule 2021

<table>
<thead>
<tr>
<th>Week</th>
<th>Lecture topics</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1. Overview of the cardiovascular system. 2. Electrical activity of the heart.</td>
</tr>
<tr>
<td>2</td>
<td>3. Generation of the heartbeat. 4. Regulation of contraction of cardiac muscle.</td>
</tr>
<tr>
<td>4</td>
<td>7. Function of the microcirculation/control of blood flow. 8. Regulation of cardiac output.</td>
</tr>
<tr>
<td>5</td>
<td>9. Short term regulation of arterial blood pressure. 10 Structure and function of the renal system.</td>
</tr>
<tr>
<td>6</td>
<td>11. Production of urine by the nephron. 12. Excretion as the outcome of filtration, reabsorption and secretion.</td>

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://policies.mq.edu.au). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Grade Appeal Policy
• Complaint Management Procedure for Students and Members of the Public
• Special Consideration Policy

Students seeking more policy resources can visit Student Policies (https://students.mq.edu.au/support/study/policies). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

To find other policies relating to Teaching and Learning, visit Policy Central (https://policies.mq.edu.au) and use the search tool.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/admin/other-resources/student-conduct

**Results**

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

**Student Support**

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

**Learning Skills**

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to help you improve your marks and take control of your study.

• Getting help with your assignment
• Workshops
• StudyWise
• Academic Integrity Module

The Library provides online and face to face support to help you find and use relevant information resources.

• Subject and Research Guides
• Ask a Librarian

**Student Enquiry Service**

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au
Equity Support

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.
