Unit description

Policies embody ideas about what governments can and should do, and how. These ideas 'frame' the problems policies address and how those problems will be solved. Policy ideas vary between policy domains and between countries and they change over time. Policy ideas are mobilised and contested by policy actors seeking changes that align with their own interests or those of their constituencies. When new ideas enter the policy process, they may offer genuinely novel solutions to old problems or renew the attractiveness of discarded approaches. New ideas can also function as solutions in search of problems. In this unit, students study policy documents and research resources to gain a critical understanding of how ideas can frame the definition of policy problems and their solutions. Because policy ideas travel, the unit considers the mechanisms and actors involved in what researchers call policy transfer or policy mobilities. Following an introduction to the role of ideas in policy, the unit is taught in three modules, each exploring the history, contours and impacts of a 'big idea' that has come into public and social policy in recent decades. Ideas in focus may include a subset of: brain and mind sciences, New Public Management, big data and governance by algorithm, social investment and asset-based social policy, user choice, sustainability, resilience, and well-being.
