Unit description

This unit focuses on the role of accounting in governance and accountability. The link between accounting and governance is discussed through the concepts of measurement, valuation, conceptual framework, reporting and communication of financial and non-financial information. The unit also acquaints students with how to apply computerised accounting software to record financial transactions and adjust accounting entries, and to prepare bank reconciliation and financial statements. On the completion of this unit, students are expected to understand the role of accounting in discharging accountability, provide accounting treatment for assets, liabilities and equity, analyse and interpret financial statements, and understand the regulatory accounting environment. Critical, analytical and integrative thinking, problem solving, communication and teamwork skills are developed through treatments of accounting transactions and events, and the completion of a business report and group project.

The face-to-face or online zoom tutorials will involve the tutors and the students working through pre-set tutorial questions. Students must register for a tutorial and attend their registered tutorial. Students are advised to note that any changes to tutorial classes must be made online through eStudent.
