## General Information

### Unit convenor and teaching staff
- Anthony Chariton  
  anthony.chariton@mq.edu.au
- Caitlin Kordis  
  caitlin.kordis@mq.edu.au

### Credit points
- 10

### Prerequisites
- 130cp at 1000 level or above including (BIOL2410 or BIOL227) or (BIOL2310 or BIOL228) or (ENVS3239 or ENVS339)

### Corequisites

### Co-badged status

### Unit description
This unit introduces the diverse nature of aquatic ecosystems, from catchment to coast, their biota, and the physical and chemical factors that have shaped their structure and function. The unit provides a holistic catchment perspective, covering lakes, rivers and estuaries communities, fish, invertebrates and ecosystem processes, with a focus on Australian systems. Students will come to understand the key ecological components and processes in aquatic systems, and how ecological knowledge can be applied to management issues. The unit will provide students with experience in environmental monitoring and manipulative experiments, including formulating hypotheses, designing experiments, data collection, analyses, and communication of results. Students will also gain fundamental field-based skills which underpin the monitoring and assessment of aquatic systems. A basic knowledge of statistics is assumed. This unit has a strong emphasis on fieldwork, with essential supporting and contextual knowledge provided by laboratory classes and lectures. This unit helps prepare individuals for employment in aquatic sciences and is beneficial for those continuing to postgraduate studies in aquatic ecology and management.

This unit also requires ALL students to attend a multi-day fieldtrip in the greater Sydney area.

## Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at [https://www.mq.edu.au/study/calendar-of-dates](https://www.mq.edu.au/study/calendar-of-dates)
Learning Outcomes

On successful completion of this unit, you will be able to:

**ULO1:** Describe the characteristics and ecological roles of the major biotic groups in aquatic ecosystems. This includes the identification of invertebrates commonly used for monitoring aquatic systems.

**ULO2:** Comprehensively understand the physical, chemical, and biotic factors in oceans, estuaries, rivers, streams, lakes, and aquifers that influence biota, and ecosystem functions and services.

**ULO3:** Apply various field and experimental methods for sampling aquatic ecosystems. This includes familiarization with the collection of data and the health and safety requirements associated with both lab and field work.

**ULO4:** Prepare, edit and analyse scientific data and reports to a professional standard. This includes developing aims and hypotheses, the statistical analysis and presentation of data.

General Assessment Information

Online quizzes, in-class activities, or scheduled tests and exam must be undertaken at the time indicated in the unit guide. Should these activities be missed due to illness or misadventure, students may apply for Special Consideration. For externals, an alternate time for the quiz (a single one hour block) can be assigned to the student, however, this must be within 72 hours after the official time for the quiz. Please contact Anthony Chariton directly by email to arrange a time.

All other assessments must be submitted by 5:00 pm on their due date. Should these assessments be missed due to illness or misadventure, students should apply for Special Consideration.

Late submissions will be accepted for all assessments in this unit with penalties. A 12-hour grace period will be given after which the following deductions will be applied to the awarded assessment mark: 12 to 24 hours late = 10% deduction; for each day thereafter, an additional 10% per day or part thereof will be applied until five days beyond the due date. After this time, a mark of zero (0) will be given. For example, an assessment worth 20% is due 5 pm on 1 January. Student A submits the assessment at 1 pm, 3 January. The assessment received a mark of 15/20. A 20% deduction is then applied to the mark of 15, resulting in the loss of three (3) marks. Student A is then awarded a final mark of 12/20.

### Class quiz

**Assessment Type:** Quiz/Test  
**Indicative Time on Task:** 10 hours  
**Due:** 28/4/2022  
**Weighting:** 20%

The quiz will cover all unit material, including additional reading material prior to the quiz date.

On successful completion you will be able to:
- Describe the characteristics and ecological roles of the major biotic groups in aquatic ecosystems. This includes the identification of invertebrates commonly used for monitoring aquatic systems.
- Comprehensively understand the physical, chemical, and biotic factors in oceans, estuaries, rivers, streams, lakes, and aquifers that influence biota, and ecosystem functions and services.
- Apply various field and experimental methods for sampling aquatic ecosystems. This includes familiarization with the collection of data and the health and safety requirements associated with both lab and field work.

### Aquatic Environmental Assessment Report

**Assessment Type:** Report  
**Indicative Time on Task:** 33 hours  
**Due:** 10/6/2022
As a practicing ecologist or environmental manager, you will be expected to prepare or review documents that describe or predict the likely effects of developments on aquatic ecosystems. The objectives of this assessment task is for you to develop skills in preparing such a report.

Students will complete an environmental assessment report based on a provided scenario. The report will follow the standard format for a professional scientific report, i.e., it will have an abstract/summary, introduction, materials and methods, results and discussion sections and appendices. It will be appropriately referenced. Further details of the assignment requirements will be provided during the semester.

On successful completion you will be able to:
- Describe the characteristics and ecological roles of the major biotic groups in aquatic ecosystems. This includes the identification of invertebrates commonly used for monitoring aquatic systems.
- Comprehensively understand the physical, chemical, and biotic factors in oceans, estuaries, rivers, streams, lakes, and aquifers that influence biota, and ecosystem functions and services.
- Apply various field and experimental methods for sampling aquatic ecosystems. This includes familiarization with the collection of data and the health and safety requirements associated with both lab and field work.
- Prepare, edit and analyse scientific data and reports to a professional standard. This includes developing aims and hypotheses, the statistical analysis and presentation of data.

Freshwater mesocosm experiment
Assessment Type: Practice-based task
Indicative Time on Task: 25 hours
Due: 11/3/2022, 1/4/2022, 13/5/2022
Weighting: 35%

The experiment will be run virtually. Three assessment tasks will be based on this semester long project.
On successful completion you will be able to:

- Describe the characteristics and ecological roles of the major biotic groups in aquatic ecosystems. This includes the identification of invertebrates commonly used for monitoring aquatic systems.

- Comprehensively understand the physical, chemical, and biotic factors in oceans, estuaries, rivers, streams, lakes, and aquifers that influence biota, and ecosystem functions and services.

- Apply various field and experimental methods for sampling aquatic ecosystems. This includes familiarization with the collection of data and the health and safety requirements associated with both lab and field work.

- Prepare, edit and analyse scientific data and reports to a professional standard. This includes developing aims and hypotheses, the statistical analysis and presentation of data.

Field work attendance and participation

Assessment Type: Field work task
Indicative Time on Task: 0 hours
Due: 11/4/2022-12/4/2022 or 13/4/2022-14/4/2022
Weighting: 0%
This is a hurdle assessment task (see assessment policy for more information on hurdle assessment tasks)

All students must attend and participate in a field trip to Kangaroo Valley. Students will be required to arrange their own travel arrangements. Attendance and participation is compulsory for both internal and external students.

On successful completion you will be able to:

- Describe the characteristics and ecological roles of the major biotic groups in aquatic ecosystems. This includes the identification of invertebrates commonly used for monitoring aquatic systems.

- Comprehensively understand the physical, chemical, and biotic factors in oceans, estuaries, rivers, streams, lakes, and aquifers that influence biota, and ecosystem functions and services.

- Apply various field and experimental methods for sampling aquatic ecosystems. This includes familiarization with the collection of data and the health and safety requirements associated with both lab and field work.
If you need help with your assignment, please contact:

- the academic teaching staff in your unit for guidance in understanding or completing this type of assessment
- the Writing Centre for academic skills support.

Indicative time-on-task is an estimate of the time required for completion of the assessment task and is subject to individual variation.

## Delivery and Resources

### Lectures

All lectures will be held via zoom.

### FIELD TRIP, FIELD CLASS and PRACTICALS

#### FIELD TRIP-Kangaroo Valley

All students (internal and externals) must attend a field trip to Kangaroo Valley. It is a requirement of the unit. **YOU MUST ATTEND A FIELD TRIP!**

Two field trips will be arranged as a means limiting the number of students per trip. **You only attend one of the field trips.** Students must make their own way to Kangaroo Valley (approximately 2.5 hrs south of Sydney). You will need to arrange your accommodation, however, we will provide suitable options in Lecture 1. All details will be discussed in Lecture 1.

**Kangaroo Valley Field Trip 1:**

Sun 10th (10:30 am) April to approximately 3 pm Mon 11th April

**Kangaroo Valley Field Trip 2:**

Tues 12th April (10:30 am) to approximately 3 pm Wed 13th April

---

**One day field class- Chowder Bay**

A half day field class will be run on **Monday 9th May.**

The class will be run in two groups 9am -12pm and 1pm-4pm, you only attend one. It will be at Chowder Bay in Sydney (near Mosman). You will get experience in sediment sampling and fish netting in estuarine systems. You will need make your own way there, details will be provided during the semester.

**YOU WILL GET WET AND BE IN THE WATER SO PLEASE DRESS FOR THE OCCASSION.**

---------------------

### Practicals

---
You only attend one of the practicals, one is for externals the other internals. These are the only pracs for the unit. You must attend one of the practicals after you field class. This is essential and compulsory.

Externals: (day after Field Trip 2): Thur 14th April
Internals: (after mid-semester break): Monday 2nd of May

Off-shore students

Off-shore students must email the convenor as soon as possible to discuss study options.

COVID Information and on-campus classes

On-campus teaching continues to be scheduled for Session 1, 2022. Masks are compulsory for all classes in indoor spaces and social distancing will be implemented wherever possible. Students will also be required to sanitise surfaces before and after use.

Students are requested to minimise the risk of spreading COVID to themselves and others in accordance with the university and NSW Health guidelines: https://www.mq.edu.au/about/coronavirus-faqs and https://www.nsw.gov.au/covid-19/stay-safe.

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://policies.mq.edu.au). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Assessment Procedure
- Complaints Resolution Procedure for Students and Members of the Public
- Special Consideration Policy

Students seeking more policy resources can visit Student Policies (https://students.mq.edu.au/support/study/policies). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.
Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/admin/other-resources/student-conduct

Results

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

Academic Integrity

At Macquarie, we believe academic integrity – honesty, respect, trust, responsibility, fairness and courage – is at the core of learning, teaching and research. We recognise that meeting the expectations required to complete your assessments can be challenging. So, we offer you a range of resources and services to help you reach your potential, including free online writing and maths support, academic skills development and wellbeing consultations.

Student Support

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

The Writing Centre

The Writing Centre provides resources to develop your English language proficiency, academic writing, and communication skills.

- Workshops
- Chat with a WriteWISE peer writing leader
- Access StudyWISE
- Upload an assignment to Studiosity
- Complete the Academic Integrity Module

The Library provides online and face to face support to help you find and use relevant information resources.

- Subject and Research Guides
- Ask a Librarian

Student Services and Support

Macquarie University offers a range of Student Support Services including:
Student Enquiries

Got a question? Ask us via AskMQ, or contact Service Connect.

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University’s IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.
