Credit points
10

Prerequisites
(BIOL2230 or BIOL257) or (20cp from (BIOL1110 or BIOL115) and ((BIOL1210 or BIOL108) or (BIOL1310 or BIOL114) or (BIOL1320 or BIOL122) or (BIOL1610 or BIOL116))) or ((PSYU1104 or PSYC104 or PSYU1101) and (PSYU1105 or PSYC105 or PSYU1102)) or ((ANAT1001 or HLTH108) and (ANAT1002 or HLTH109))

Corequisites

Co-badged status

Unit description
This unit considers the maintenance of body homeostasis. We investigate the cardiovascular system including an examination of the electrical and mechanical functions of the heart, its interaction with the blood vessels, and the hormones and the autonomic nervous system that control heart function. Next we study the role of the renal system in the control of the chemical composition of the body, water balance and body fluid volume. An overview of the respiratory system and the gastrointestinal systems will follow. Practical classes involve measuring physiological parameters such as blood pressure and electrical conduction through the heart (the ECG) in humans.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes
On successful completion of this unit, you will be able to:
ULO1: Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
ULO2: Relate specific structural features of organs to essential system functions
ULO3: Interpret physiological processes using equations of physical, chemical, and electrical properties
ULO4: Analyse data, and synthesise and communicate the implications of experimental results
ULO5: Perform experiments safely with human subjects and accurately collect data, demonstrating adherence to Macquarie University Human Research Ethics Committee sanctioned protocols
ULO6: Identify situations in which organ systems interact to produce a co-ordinated response

General Assessment Information

Online quizzes
All eight quizzes are in the form of multiple choice questions and will be available on iLearn. Only one attempt at each quiz is allowed. Similar to the mid-semester test you will see only one question at a time. You will have only one chance to answer each question. You may not go back in the quiz to correct any answers. Think carefully before answering and budget your overall time carefully.

Practical classes and assignments
Practical classes will run on campus only. You will find detailed information concerning online and on-campus sessions (for internals and externals) on iLearn. You will be assigned a practical time slot and you are expected to attend all practical classes. There are written assignments associated with the ECG, Cardiovascular System (Posture) and the Permeability practical classes. The practical classes and assessments are a hurdle for BIOL2220. A hurdle requirement is an activity for which a minimum level of performance or participation is a condition of passing a unit. The hurdle requirement in BIOL2220 in 2022 is that you must complete and submit all three practical assignments.

The details of each of the three practical assignments are in the practical manual which can be accessed through iLearn. The completed assignments must be submitted to Turnitin by the due dates (or else late penalties will apply if no special considerations has been approved). No paper copies will be accepted.

Mid-semester Test
This test will include 35 multiple choice questions to be completed in 50 minutes. All of the cardiovascular section, the first three renal lectures (lectures 1-12) and the material presented in the completed practical classes may be included in the test. You must complete the test individually. During the test you will see only one question at a time. You will have only one
chance to answer each question. You may not go back in the quiz to correct any answers. Think carefully before answering and budget your overall time carefully.

Final Exam
The exam is a two hour paper with multiple choice questions, and short answer questions. All the lecture and practical material is examinable.

Final Exam Late Assessment Submission Penalty
From 1 July 2022, Students enrolled in Session based units with written assessments will have the following university standard late penalty applied. Please see https://students.mq.edu.au/study/assessment-exams/assessments for more information. Unless a Special Consideration request has been submitted and approved, a 5% penalty (of the total possible mark) will be applied each day a written assessment is not submitted, up until the 7th day (including weekends). After the 7th day, a grade of '0' will be awarded even if the assessment is submitted. Submission time for all written assessments is set at 11:55 pm. A 1-hour grace period is provided to students who experience a technical concern. For any late submission of time-sensitive tasks, such as scheduled tests/exams, performance assessments/presentations, and/or scheduled practical assessments/labs, students need to submit an application for Special Consideration.

Assessments where Late Submissions will be accepted
In this unit, late submissions will accepted as follows:
AT1 Quizzes - YES, Standard Late Penalty applies
AT2 Practical assessments - YES, Standard Late Penalty applies
AT3 Mid-semester Test - NO, unless Special Consideration is Granted
AT4 Final - NO, unless Special Consideration is Granted

Eight online quizzes
Assessment Type ¹: Quiz/Test
Indicative Time on Task ²: 8 hours
A number of online quizzes will be undertaken throughout the semester.

On successful completion you will be able to:

• Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
• Relate specific structural features of organs to essential system functions
• Interpret physiological processes using equations of physical, chemical, and electrical properties
• Analyse data, and synthesise and communicate the implications of experimental results

Practical class assignments

Assessment Type 1: Lab report
Indicative Time on Task 2: 16 hours
Due: Weeks 4, 5 & 12
Weighting: 15%
This is a hurdle assessment task (see assessment policy for more information on hurdle assessment tasks)

There are three assignments based on practical classes. These are to be completed in the week following the practical, and submitted to Turnitin. This is a hurdle and students have to submit all three assignments to be able to pass the unit.

On successful completion you will be able to:

• Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
• Interpret physiological processes using equations of physical, chemical, and electrical properties
• Analyse data, and synthesise and communicate the implications of experimental results
• Perform experiments safely with human subjects and accurately collect data, demonstrating adherence to Macquarie University Human Research Ethics Committee sanctioned protocols
• Identify situations in which organ systems interact to produce a co-ordinated response
Mid-semester test

Assessment Type: Quiz/Test
Indicative Time on Task: 3 hours
Due: Week 7
Weighting: 15%

A mid-semester test will be undertaken online before the mid-semester break.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Relate specific structural features of organs to essential system functions
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Identify situations in which organ systems interact to produce a co-ordinated response

Final Exam

Assessment Type: Examination
Indicative Time on Task: 3 hours
Due: Exam period
Weighting: 50%

The final exam will be held in the formal examination period, and will be based on all lecture and practical material.

On successful completion you will be able to:

- Explain how the cardiovascular, renal and respiratory systems contribute to the maintenance of homeostasis
- Relate specific structural features of organs to essential system functions
- Interpret physiological processes using equations of physical, chemical, and electrical properties
- Analyse data, and synthesise and communicate the implications of experimental results
- Identify situations in which organ systems interact to produce a co-ordinated response
1 If you need help with your assignment, please contact:

- the academic teaching staff in your unit for guidance in understanding or completing this type of assessment
- the Writing Centre for academic skills support.

2 Indicative time-on-task is an estimate of the time required for completion of the assessment task and is subject to individual variation

Delivery and Resources

iLearn
Your iLearn site will contain everything you need for this course, including discussion forums and class announcements. You should check this site regularly. You should also check your university email regularly for important announcements.

Lectures and practicals
There will be two lectures each week. Pre-recorded lectures will be made available via iLearn and there will be optional on-campus viewings.

Practical classes begin in week two. These will operate in-person, on campus. Practical classes run for a maximum of 3 hours. When you enroll in the unit you will be assigned to one of the practical classes. We ask that you attend the online practical in your allotted time so that we can balance the student load across the classes. Please contact the Unit Convenor if your allocation will cause undue hardship or unavoidable timetable clashes.

Unit Material and Textbooks

Past exam papers, and the final exam in 2022
The final exam will take place on-campus unless further instructions are given that it should run online. To help you prepare for the final exam you may wish to look at past exam papers. These can be accessed from the library using this link.

Note that the structure of the exam in 2022 will be similar to, but not identical to previous years.

Unit Schedule
Lecture schedule 2021

<table>
<thead>
<tr>
<th>Week</th>
<th>Lecture topics</th>
</tr>
</thead>
</table>

https://unitguides.mq.edu.au/unit_offerings/149177/unit_guide/print
1. Overview of the cardiovascular system
2. Electrical activity of the heart.

2. Generation of the heartbeat
3. Regulation of contraction of cardiac muscle.

3. Physics of the circulation
4. Components of the circulation and their specific functions.

4. Function of the microcirculation/control of blood flow
5. Regulation of cardiac output.

5. Short term regulation of arterial blood pressure

6. Production of urine by the nephron
7. Excretion as the outcome of filtration, reabsorption and secretion.

7. Water balance: the control of ECF osmolarity
8. Sodium balance: the control of ECF volume and blood pressure.

Study break

8. Structure and function of the respiratory system
9. The process of breathing.

9. Alveolar ventilation and perfusion
10. Gas exchange

10. Control of respiration
11. Nutrition

11. Function and organisation of the gastrointestinal system
12. Motility of the gastrointestinal system

12. Secretion in the gastrointestinal system
13. Digestion and absorption of food.

13. Catch up and revision

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central (https://policies.mq.edu.au). Students should be aware of the following policies in particular with regard to Learning and Teaching:
Students seeking more policy resources can visit Student Policies (https://students.mq.edu.au/support/study/policies). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

To find other policies relating to Teaching and Learning, visit Policy Central (https://policies.mq.edu.au) and use the search tool.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/admin/other-resources/student-conduct

**Results**

Results published on platform other than eStudent, (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

**Academic Integrity**

At Macquarie, we believe academic integrity – honesty, respect, trust, responsibility, fairness and courage – is at the core of learning, teaching and research. We recognise that meeting the expectations required to complete your assessments can be challenging. So, we offer you a range of resources and services to help you reach your potential, including free online writing and maths support, academic skills development and wellbeing consultations.

**Student Support**

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

**The Writing Centre**

The Writing Centre provides resources to develop your English language proficiency, academic writing, and communication skills.

- Workshops
- Chat with a WriteWISE peer writing leader

https://unitguides.mq.edu.au/unit_offerings/149177/unit_guide/print
The Library provides online and face to face support to help you find and use relevant information resources.

- Subject and Research Guides
- Ask a Librarian

**Student Services and Support**

Macquarie University offers a range of **Student Support Services** including:

- IT Support
- Accessibility and disability support with study
- Mental health support
- Safety support to respond to bullying, harassment, sexual harassment and sexual assault
- Social support including information about finances, tenancy and legal issues

**Student Enquiries**

Got a question? Ask us via AskMQ, or contact Service Connect.

**IT Help**

For help with University computer systems and technology, visit [http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/](http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/).

When using the University's IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.
