Unit description

This unit focuses on topics concerned with issues in both financial and management accounting in international contexts. Particular attention is given to the impact of national culture and to how an understanding of cultural differences provides insights into cross-national differences in financial reporting practices and management behaviour. Current issues in accounting standard-setting in an international context, including the debate on international accounting convergence, and problems facing international companies in organising, managing, planning, controlling and evaluating their global operations are examined. A solid understanding of cultural influences on international accounting practices is a requirement for any advanced study of accounting theory. This unit provides students with essential internationally contextualised accounting experiences that develop the concepts and skills necessary for advanced research in accounting and corporate governance.
