Unit description

This unit explores the various forms of intellectual property protected under statutory regimes and general law. The unit identifies and evaluates existing intellectual property regimes such as copyright, patents, plant breeders' rights, designs, trade mark, passing off and relevant aspects of unfair trading laws. The unit analyses the subject matter protected, conditions of such protection and what constitutes infringement for each head of protection. Students are taught to identify and explain the interrelationship and overlaps between different intellectual property regimes. Students learn how to apply intellectual property principles and policy in practical scenarios.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>
