Unit description
Around the world and across time, human cultural variation has extended into the depths of the human psyche, shaping different ways of being human. Are we all the same or do the ways we treat emotion, conflict, social interaction, cognition, and other dimensions of life result in differences among people? Psychological anthropology has traditionally focused on such themes, investigating the cultural dimensions of self, personality, cognition, emotion, normalcy and deviance, seeking to understand both the variant and universal features of human emotional, cognitive, and social life. Students will have the opportunity to explore an area of personal interest in psychological anthropology.
