Unit description
An advanced level study of some of the most common categories of material in the ancient world, including metals, stones, clay, animal and plant based fibers, timber and ivory, and various genres of materials production such as architecture, ceramics, sculpture, weaponry and equestrian equipment, with particular emphasis on technology, manufacture, function, style, iconography, chronology and spatial distribution. Material will normally be drawn from a diverse range of cultures, with specific physical examples from the collections of the Museum of Ancient Cultures, and may vary from year to year. Relying on this background, and in parallel, students will also be introduced to the history of museums and museum collections, the illicit trade of antiquities, the manufacture of forgeries, the participation of public museums and private collectors and related repercussions for the reconstruction of the historical record.
