Unit description

In 1215 CE, a Mongol army led by Genghis Khan conquered the Chinese city of Zongdhu (present-day Beijing), creating the basis for the largest contiguous land empire in human history. That same year, leaders of the Latin Church met for the Fourth Lateran Council in Rome at the other end of Eurasia, establishing western European Christian doctrine for the next three centuries. These civilizations soon came into contact as the Mongol Empire enabled commerce and cultural exchange between east and west Eurasia. This unit explores how the increasingly complex network of connections that linked Europe and the wider world between the High Middle Ages and the eve of the modern era helped to create the particular society and culture that we today frequently refer to as “the West.” We focus on the historical contingency of this creation and the ways in which both European and non-European influences and factors forged the idea of the West. From medieval encounters between Christianity and Islam to eighteenth-century encounters between Pacific Islanders and Europeans, from the thirteenth-century Eurasian economic world system to the truly global economy that emerged after 1500, from the horseback empire of the Mongols to the maritime empires built by European states, we explore the transformation of the premodern world. The unit considers these processes from both European and non-European perspectives.
