Unit description

The unit will introduce you, the business leader, to essential accounting, accountability and corporate governance concepts. It supports your development of technical, theoretical, research, and communication skills that enhance the quality of your business judgments and decision-making. International and national contextual factors and theoretical frameworks are examined to gain valuable insights into the intricacies of business decision-making processes. The discussion and analysis begin with the three financial statements targeted at external users: statement of profit or loss, statement of financial position and statement of cash flows. The unit then proceeds to analyse and interpret financial information and use management accounting information for managerial decision-making. Research skills and real-life complexities inherent in decision-making are highlighted to support making more holistic business decisions.
