Unit description

This unit extends the concepts introduced in ECON1020 to analyse economy-wide employment, economic activity, inflation and financial market prices such as interest rates and exchange rates. It covers the sources of long-run economic growth, especially specialisation and trade and technology innovation and diffusion, and their impact on wages inequality. It outlines why short-run business cycles occur and how they can be addressed by budgetary and interest rate policies. The unit also focuses on the importance of well-functioning financial markets and recent economic crises.
