Unit description
This unit covers both fundamental issues and recent trends in distributed computing. We examine the complexities of distributed communications systems such as partial failures, shared memory, scheduling problems and multiple clocks. Networking protocols and other industry standards are discussed. Lectures will mostly be expository and conceptual and aim to provide a solid understanding of distributed systems and related enduring issues.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes
On successful completion of this unit, you will be able to:

- Describe the complexities of distributed system development and approaches to solve those complexities
- Distinguish the goals and architectures of distributed systems
- Explain important issues in distributed systems, including time, inter-process communication, state management, distributed computing paradigms, data fragmentation and replication, middleware, and naming
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST
- Analyze and design distributed systems
Assessment Tasks

<table>
<thead>
<tr>
<th>Name</th>
<th>Weighting</th>
<th>Due</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weekly problems</td>
<td>10%</td>
<td>Weekly</td>
</tr>
<tr>
<td>Assignment 1</td>
<td>20%</td>
<td>Week 7</td>
</tr>
<tr>
<td>Assignment 2</td>
<td>20%</td>
<td>Week 12</td>
</tr>
<tr>
<td>Examination</td>
<td>50%</td>
<td>After final lecture</td>
</tr>
</tbody>
</table>

Weekly problems
Due: Weekly
Weighting: 10%

After each lecture a set of tutorial questions will be posted on iLearn. Students need to research and answer these questions which will be marked on a weekly basis.

On successful completion you will be able to:
- Distinguish the goals and architectures of distributed systems
- Explain important issues in distributed systems, including time, inter-process communication, state management, distributed computing paradigms, data fragmentation and replication, middleware, and naming

Assignment 1
Due: Week 7
Weighting: 20%

Assignment 1 assesses progress and understanding of lecture material. It will set a moderate design task to be completed.

On successful completion you will be able to:
- Describe the complexities of distributed system development and approaches to solve those complexities
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.
- Analyze and design distributed systems

Assignment 2
Due: Week 12
Assignment 2 will be researching a couple of topics we have covered and writing a report on those topics.

On successful completion you will be able to:

- Describe the complexities of distributed system development and approaches to solve those complexities
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.
- Analyze and design distributed systems

**Examination**

Due: **After final lecture**

Weighting: **50%**

The final examination will consist of questions based on the lecture material, tutorial problems and assignments. The examination will be closed book, three hours long and held in the end of session examination period.

All learning outcomes will be assessed in the final examination, which will cover the entirety of the lecture material.

On successful completion you will be able to:

- Distinguish the goals and architectures of distributed systems
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.
- Analyze and design distributed systems

**Delivery and Resources**

**Classes**

Each week you should attend the class which is three to four hours. For details of days, times and rooms consult the [timetables webpage](https://timetables.mq.edu.au/).

This course has no extra classes for tutorials or practicals.

Please note it is to your benefit to attend most of the classes, prepared to participate in discussions, ask and answer questions, and provide perspectives from your own background and workplaces.

**Resources to assist your learning**

Digital recordings of lectures are available as Echo360 through iLearn login. These are provided for review material and in case of missing lectures.
iLearn is used for out-of-class communication as well as forums where active discussion of issues is encouraged. iLearn can be found at can be found at http://learn.mq.edu.au. You are encouraged to review iLearn weekly and to do background reading before each class.

**Textbook**

The textbook for ITEC801 is:

## Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

### Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

### Student Support

Macquarie University provides a range of support services for students. For details, visit [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)

### Learning Skills

Learning Skills ([mq.edu.au/learningskills](https://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.
Student Services and Support
Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

Student Enquiries
For all student enquiries, visit Student Connect at ask.mq.edu.au

IT Help
For help with University computer systems and technology, visit http://informatics.mq.edu.au/help/.
When using the University's IT, you must adhere to the Acceptable Use Policy. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities
PG - Discipline Knowledge and Skills
Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes
- Describe the complexities of distributed system development and approaches to solve those complexities
- Distinguish the goals and architectures of distributed systems
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.

Assessment tasks
- Weekly problems
- Examination

PG - Critical, Analytical and Integrative Thinking
Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and
knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

**Learning outcomes**

- Distinguish the goals and architectures of distributed systems
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.
- Analyze and design distributed systems

**Assessment tasks**

- Assignment 1
- Assignment 2
- Examination

**PG - Research and Problem Solving Capability**

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

**Learning outcomes**

- Describe the complexities of distributed system development and approaches to solve those complexities
- Explain important issues in distributed systems, including time, inter-process communication, state management, distributed computing paradigms, data fragmentation and replication, middleware, and naming
- Identify applicability of technologies that support distributed applications such as RPC, RMI and object-based technology, message passing, and REST.
- Analyze and design distributed systems

**Assessment tasks**

- Weekly problems
- Assignment 1
- Assignment 2
- Examination
PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

**Learning outcomes**

- Describe the complexities of distributed system development and approaches to solve those complexities
- Explain important issues in distributed systems, including time, inter-process communication, state management, distributed computing paradigms, data fragmentation and replication, middleware, and naming
- Analyze and design distributed systems

**Assessment tasks**

- Weekly problems
- Assignment 1
- Assignment 2
- Examination
