HLTH304
Unit description
This unit is conducted to develop students' knowledge in the underlying physical principles of medical radiation science. The unit is presented in three distinct modules:- module 1 is the study of radiation physics, its principles and current technology of imaging equipment,- module 2 is the study of the principles and practice of image production and image processing techniques,- module 3 describes the biological effects of radiation as well as current radiation protection techniques.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://students.mq.edu.au/important-dates

Learning Outcomes
1. Summarise the working principles of x-ray tubes and how these influence their operation and performance
2. Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety
3. Critically appraise the principles of radiographic image production and processing
4. Contrast the generation and use of advanced imaging modalities
5. Explain the biological effects of radiation
6. Summarise radiation protection in relation to radiography
7. Apply the principles of image production and radiation protection in a clinical context

General Assessment Information

TUTORIALS
Attendance at 3 laboratory sessions across the semester, covering each of the different experiments is compulsory. A missed session must be made up prior to week 13. A timetable will be released early in the semester to inform you which laboratory sessions you should attend.

ASSIGNMENTS
Submission of assignments will be through ilearn unless otherwise indicated.

It is expected that the academic honesty policy (http://mq.edu.au/policy/docs/academic_honesty/policy.html) be followed at all times. Breaches of the academic honesty policy may result in disciplinary procedures for the involved student.

Assignment word limits should be adhered to. A deduction of 10% of the final grade will be applied for every 10% increase in word count above the set limit. Word count does not include reference lists.
Late submission of assignments will result in a grade deduction of 10% per day late. Submissions handed in more than 1 week after the due date will not be assessed.

Extensions to assessment due dates may be granted under extenuating circumstances. Application for extensions must be made under the disruption to studies policy (http://students.mq.edu.au/student_admin/exams/disruption_to_studies/), applied for through www.ask.mq.edu.au within 5 days of the disruption and prior to the submission date of the assignment. Resubmission of assignments will not be considered under usual circumstances.

**THEORY EXAMINATIONS**

The University Examination period for Semester 1, 2016 is from June 14th to July 1st 2016.

You are expected to present yourself for examination at the time and place designated in the University Examination Timetable. The timetable will be available in Draft form approximately eight weeks before the commencement of the examinations and in Final form approximately four weeks before the commencement of the examinations.

The only exception to not sitting an examination at the designated time is because of documented illness or unavoidable disruption. In these circumstances you may wish to consider applying for disruption to studies. Information about unavoidable disruption and the disruption to studies process is available at http://students.mq.edu.au/student_admin/exams/disruption_to_studies/, applied for through www.ask.mq.edu.au within 5 days of the disruption.

If a Supplementary Examination is granted the examination will be scheduled after the conclusion of the official examination period.

If you sit the theory exam but successfully apply for disruption from studies for that exam you will be required to sit a supplementary examination. This exam will take the format of short answer questions in a VIVA (oral) exam.

You are advised that it is Macquarie University policy not to set early examinations for individuals or groups of students. All students are expected to ensure that they are available until the end of the teaching semester, that is the final day of the official examination period.

**Assessment Tasks**

</tbody>
</table>
Assignment 1
Due: **Wednesday 6 April 5pm**
Weighting: **15%**
Online quiz covering module 1 (physics); Available on ilearn from Friday 18/3/16

This Assessment Task relates to the following Learning Outcomes:
- Summarise the working principles of x-ray tubes and how these influence their operation and performance
- Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety

**Laboratory work**
Due: **Varies for each prac group**
Weighting: **15%**

3 experiments will be performed across the course of semester starting in week 3 or 4. You will be allocated a group and the timetable of which weeks you are to attend will be posted on ilearn.

This Assessment Task relates to the following Learning Outcomes:
- Summarise the working principles of x-ray tubes and how these influence their operation and performance
- Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety

Assignment 2
Due: **Wednesday 11 May 5pm**
Weighting: **20%**

Assignment 2 will be available and submitted through ilearn. It will cover material from module 2. More information regarding this will be available early in the semester.

This Assessment Task relates to the following Learning Outcomes:
- Critically appraise the principles of radiographic image production and processing
- Apply the principles of image production and radiation protection in a clinical context

**Final Examination**
Due: **University Exam period**
Weighting: **50%**

Exam material from the whole semester.
Unit guide CHIR606 Radiographic Science

A formula sheet will be provided.

Scientific calculators are allowed.

The format and examinable material will have some differences to previous years. More information regarding this will be given during the semester.

This Assessment Task relates to the following Learning Outcomes:

- Summarise the working principles of x-ray tubes and how these influence their operation and performance
- Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety
- Critically appraise the principles of radiographic image production and processing
- Contrast the generation and use of advanced imaging modalities
- Explain the biological effects of radiation
- Summarise radiation protection in relation to radiography

Delivery and Resources

2-hour lectures each week on Friday 10am-12pm in E7BT4 and 3 x 3-hour practical laboratory’s per student as scheduled.

The web page for this unit can be found at: https://ilearn.mq.edu.au and following the links for either Postgraduate or Undergraduate students

REQUIRED TEXTS/MANUALS

HLTH304/CHIR606 Laboratory Notebook 2016 – available from Co-op book store.

REFERENCES

Introduction to Radiologic Technology. - LaVerne Tolley Gurley & William J. Callaway (7th Edition); Mosby St Louis 2011

Unit Schedule

WEEK 1  Rich Mildren/Hazel Jenkins

Introduction. Electricity and magnetism/Explanation of syllabus. Historical background and the
current use of radiography.

**WEEK 2/3  Rich Mildren**

Electric currents. Electromagnetic radiation. X-ray circuits. X-ray tubes. What are X-rays and how are they produced.

**WEEK 4 NO LECTURE: PUBLIC HOLIDAY**

**WEEK 5 Rich Mildren/Hazel Jenkins**

X-ray interactions./Image formation. Optical Density and Contrast as related to exposure parameters: milliamperes (mA), time (s), milliampere seconds (mAs), Kilovoltage (kVp), distance (SiD or FFD).

**WEEK 6 Hazel Jenkins**

**WEEK 7 Anthony Buxton**

Radiographic film. Film processing. Sensitometry & densitometry. Characteristic curve. Intensifying screens – Construction; Spectral matching; Screen speed; Quantum mottle Film/ screen cassettes;

**WEEK 8 Anthony Buxton**

**WEEK 9 Anthony Buxton**

**WEEK 10 Anthony Buxton**

Special radiographic equipment (Fluoroscopy, CT, MRI).

**WEEK 11 Subra Vemulpad**

Biological effects of radiation. The Law of Bergonne & Tribondeau. Linear energy transfer. Types of cell damage.

**WEEK 12 Subra Vemulpad**

**WEEK 13 Anthony Buxton**

**Policies and Procedures**

Macquarie University policies and procedures are accessible from [Policy Central](https://www.mq.edu.au/policies). Students should be aware of the following policies in particular with regard to Learning and Teaching:
Academic Honesty Policy  http://mq.edu.au/policy/docs/academic_honesty/policy.html

Disruption to Studies Policy  http://www.mq.edu.au/policy/docs/disruption_studies/policy.html The Disruption to Studies Policy is effective from March 3 2014 and replaces the Special Consideration Policy.

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct:  https://students.mq.edu.au/support/student_conduct/

**Results**

Results shown in *iLearn*, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

**Student Support**

Macquarie University provides a range of support services for students. For details, visit  http://students.mq.edu.au/support/

**Learning Skills**

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

**Student Enquiry Service**

For all student enquiries, visit Student Connect at ask.mq.edu.au
Equity Support
Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help
For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the Acceptable Use of IT Resources Policy. The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

Discipline Specific Knowledge and Skills
Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

• Summarise the working principles of x-ray tubes and how these influence their operation and performance
• Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety
• Critically appraise the principles of radiographic image production and processing
• Contrast the generation and use of advanced imaging modalities
• Explain the biological effects of radiation
• Summarise radiation protection in relation to radiography
• Apply the principles of image production and radiation protection in a clinical context

Assessment tasks

• Assignment 1
• Laboratory work
• Assignment 2
• Final Examination
Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

**Learning outcomes**

- Critically appraise the principles of radiographic image production and processing
- Summarise radiation protection in relation to radiography
- Apply the principles of image production and radiation protection in a clinical context

**Assessment tasks**

- Assignment 2
- Final Examination

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

**Learning outcome**

- Summarise radiation protection in relation to radiography

**Assessment task**

- Final Examination

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:
Learning outcomes

• Explain the biological effects of radiation
• Summarise radiation protection in relation to radiography

Assessment task

• Final Examination

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcomes

• Critically appraise the principles of radiographic image production and processing
• Summarise radiation protection in relation to radiography
• Apply the principles of image production and radiation protection in a clinical context

Assessment tasks

• Assignment 2
• Final Examination

Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcomes

• Critically appraise the principles of radiographic image production and processing
• Summarise radiation protection in relation to radiography

Assessment tasks

• Assignment 2
• Final Examination
Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

- Summarise the working principles of x-ray tubes and how these influence their operation and performance
- Identify the properties of x-rays and explain how they interact with matter, and influence imaging quality and patient safety
- Critically appraise the principles of radiographic image production and processing
- Contrast the generation and use of advanced imaging modalities
- Explain the biological effects of radiation
- Summarise radiation protection in relation to radiography
- Apply the principles of image production and radiation protection in a clinical context

Assessment tasks

- Assignment 1
- Laboratory work
- Assignment 2
- Final Examination

Socially and Environmentally Active and Responsible

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

Learning outcomes

- Explain the biological effects of radiation
- Summarise radiation protection in relation to radiography

Assessment task

- Final Examination
Changes from Previous Offering

There is no longer a mid-semester exam and the physics material will now be included in the final examination in the formal examination period. Please be aware of this change when looking at past exam examples as there will be no physics questions included in the past exams.

Disruption from Studies Policy

Serious and unavoidable disruption: The University classifies a disruption as serious and unavoidable if it:

- could not have reasonably been anticipated, avoided or guarded against by the student; and
- was beyond the student's control; and
- caused substantial disruption to the student's capacity for effective study and/or completion of required work; and
- occurred during an event critical study period and was at least three (3) consecutive days duration, and/or
- prevented completion of a final examination.

Students with a pre-existing disability/health condition or prolonged adverse circumstances may be eligible for ongoing assistance and support. Such support is governed by other policies and may be sought and coordinated through Campus Wellbeing and Support Services.

If a supplementary examination is granted as a result of the disruption to studies process the examination will be scheduled after the conclusion of the official examination period. (Individual Faculties may wish to signal when the Faculty Supplementary exams are normally scheduled.)

If you are granted a supplementary exam via the Disruption to Studies process, you will have to write a supplementary exam in the supplementary exam period. In this scenario, only your supplementary exam mark will count towards your final exam mark, irrespective of whether or not you attended the final exam in the normal examination period. The submission of a Disruption to Studies form should not be used as a 'just in case' strategy.

You are advised that it is Macquarie University policy not to set early examinations for individuals or groups of students. You are expected to ensure that you are available until the end of the teaching semester that is the final day of the official examination period.
