Corequisites
TEP401

Co-badged status

Unit description
This unit builds on TEP388 and introduces students to modern approaches for the teaching and learning of Science in secondary schools. Curricula, resources and instructional strategies appropriate to teaching Science are examined, with particular attention to years 7-10 and Senior Science. It is linked to the school experience gained in TEP401.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://www.mq.edu.au/study/calendar-of-dates

Learning Outcomes
On successful completion of this unit, you will be able to:

1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science
2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)
3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;
4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);
5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);
6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;

7 to think critically about their use of information and communication technologies (ICT) to enhance the quality of learning and teaching to engage students with science;

8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

### Website Evaluations

**Due: 24 March 2016**

**Weighting: 10%**

The aim of this assignment is for you to critique a science website for the specific purpose of science teaching. The assignment will assist you in the further selection of websites for science learning/teaching at a junior secondary school. Teachers often use the following websites either for Stage 4/5 or for a specific science subject in Stage 6. Suggested time for this assignment is 6 hours.

On successful completion you will be able to:

- 5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);
- 7 to think critically about their use of information and communication technologies (ICT) to enhance the quality of learning and teaching to engage students with science;
- 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and
Reflexive practice

Due: 19 May 2016
Weighting: 40%

The aim of the assignment is to give you the opportunity to develop your expertise in inquiry-based, student-centred science teaching by using this approach in one lesson of your choice during your professional practice (TEP401), and engaging in reflection on this lesson. Suggested time is 24 hours. This does not include the time spent at school because this is part of your TEP401 requirements.

On successful completion you will be able to:

• 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science
• 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)
• 4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);
• 5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);
• 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;

conceptual understanding

Due: 16 June
Weighting: 50%

The aim of this assignment is to provide you with the opportunity to develop research skills for diagnosing and solving problems in the classroom (See GC3 in the Graduate Capabilities section). Suggested time is 30 hours. This does not include the time spent at school because this is part of your TEP401 requirements.

On successful completion you will be able to:

• 3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;
• 5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);
• 6 the ability to interpret research findings both in science and science education and
relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;

- a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

**Delivery and Resources**

**Required Texts**

Students must have access to the following syllabus document:

**Recommended Texts**

Developing as a reflective secondary teacher. London: SAGE.

Science education journals in Macquarie University library

Please note: Many of these journals are available electronically from the library.

**Teaching Science (The journal of the Australian Science Teachers Association)**

International Journal of Science Education

Journal of Biology Education

Journal of Chemical Education

Journal of Research in Science Education

Research in Science Education

School Science and Mathematics

School Science Review

Science Education

Studies in Science Education

**Key words which might assist in your ERIC search**

Science activities, curriculum, instruction programs, experiments, biology, physics, chemistry, environmental studies/science, geology, real science, authentic science

Secondary School high school, elementary, secondary, ESL, Indigenous

Teachers science teachers, beginning teachers, student teachers, mentors, exemplary teachers

Teaching Methods quality teaching, diagnostic teaching, multi-media, technology, gender, group work, concept maps, computer, Internet, ICT

Learning Strategies children’s science, alternative frameworks, conceptual change, misconceptions, constructivism, ESL, ICT, problem solving, controversial issues, discovery learning, group work, individual instruction.

**Relevant websites**
Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

**Results**

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

**Student Support**

Macquarie University provides a range of support services for students. For details, visit [http://stu](http://stu)
Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

**Learning outcomes**

- 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science
- 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)
- 4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);
- 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and
Commitment to Continuous Learning

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

Learning outcomes

- 3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;
- 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;
- 7 to think critically about their use of information and communication technologies (ICT) to enhance the quality of learning and teaching to engage students with science;
- 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:
Learning outcomes

• 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science
• 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)
• 3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;
• 4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);
• 5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);
• 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;
• 7 to think critically about their use of information and communication technologies (ICT) to enhance the quality of learning and teaching to engage students with science;
• 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

Assessment tasks

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systematically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes

• 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES,
Unit guide EDTE433 Science in the Secondary School I

NSWDET) and Australia (ACARA) with specific reference to science

• 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)

• 3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;

• 4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);

• 5 a working knowledge of the relevant syllabus science documents from both the BOSTES (NSW) and National Curriculum (ACARA);

• 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;

• 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

Assessment tasks

• Reflexive practice

• Conceptual understanding

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

• 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science

• 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)

• 3 a developing knowledge of both formal and informal assessment procedures in current use in secondary science classrooms;

• 4 the ability to reflect on and critique one’s own professional practice with due regard to
the input provided by experienced science teacher(s);
• 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;
• 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and assessment and evaluation.

Assessment tasks

Effective Communication
We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes
• 1 a knowledge of the changing policy context of secondary schooling in NSW (BOSTES, NSWDET) and Australia (ACARA) with specific reference to science
• 2 the ability to plan and present sequential lessons based on evidence collected during the professional experience (TEP401)
• 4 the ability to reflect on and critique one’s own professional practice with due regard to the input provided by experienced science teacher(s);
• 6 the ability to interpret research findings both in science and science education and relate these where appropriate to adolescent’s understandings in science, their lives and to current syllabus documents;
• 7 to think critically about their use of information and communication technologies (ICT) to enhance the quality of learning and teaching to engage students with science;
• 8 a developing understanding of key elements of pedagogy including: the strategies needed to cater for the diversity of learners (including specific equity groups), actively engaging students in learning, classroom management, beginning and ending lessons, integrating a focus on literacy, developing and selecting resources, questioning, and
assessment and evaluation.
