Unit description
This is a foundation unit in astronomy, suitable for aspiring physicists/astronomers and non-scientists alike. No prior knowledge of astronomy or physics is required. This unit gives a broad underpinning of basic astronomical subjects and concepts with minimal mathematical content. A diverse range of astronomical topics are covered, starting with the solar system, including comets and asteroids; and then increasing in scale to Galactic stars, nebulae, the interstellar medium, our own Milky Way galaxy, galaxy clusters, quasars, black holes and basic cosmology. Key fundamental physical principles, theories and observational technologies are covered. Experimental work is both hands-on and computer based, and covers such areas as galaxy classification, eclipses, spectroscopy and geometrical optics. A session at the Macquarie University Observatory forms a recommended part of the practical work.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://students.mq.edu.au/important-dates

Learning Outcomes

1. Have an understanding of the scale of the Universe and our relative place in it
2. Appreciate how the development of astronomy through history has altered our
perceptions (world view) of our physical universe

3. Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"

4. Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs

5. Have a basic understanding of the physics of light and gravity.

6. Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.

7. Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.

8. Understand how the earth’s seasons arise and how eclipses of both Sun and moon occur.

9. Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).

10. Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.

11. Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).

12. Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.

13. Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.

14. Have a basic understanding of modern Cosmology: how the Universe began and where it’s going.

15. Obtain an appreciation of the factors that could affect life in the Universe.

Final Examination

Due: University Examination period
Weighting: 60%

The Final Examination will be three hours in duration. The basic format will essentially follow that of previous years. Calculators which do not have a full alphabet on the keyboard will be allowed into the examination. You are expected to present yourself for examination at the time and place designated in the University Examination Timetable (http://www.timetables.mq.edu.au/exam/).

The timetable will be available in draft form approximately eight weeks before the commencement of the examinations, and in final form approximately four weeks before the commencement of the examinations.

This Assessment Task relates to the following Learning Outcomes:

- Have an understanding of the scale of the Universe and our relative place in it
- Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
- Have an understanding how science advances through observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
- Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
- Have a basic understanding of the physics of light and gravity.
- Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.
- Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
- Understand how the earth’s seasons arise and how eclipses of both Sun and moon occur.
- Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
- Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
- Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
- Acquire a basic understanding of the nature and diversity of other galaxies, including
extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.

- Have a basic understanding of modern Cosmology: how the Universe began and where it’s going.
- Obtain an appreciation of the factors that could affect life in the Universe.

Assignments (6)
Due: **Week 2-12**
Weighting: **20%**

There is a special assignment worth 10% and an observatory based assignment worth 2% within this overall 20%

This Assessment Task relates to the following Learning Outcomes:

- Have an understanding of the scale of the Universe and our relative place in it
- Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
- Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
- Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
- Have a basic understanding of the physics of light and gravity.
- Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.
- Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
- Understand how the earth’s seasons arise and how eclipses of both Sun and moon occur.
- Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
- Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
- Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
• Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.
• Have a basic understanding of modern Cosmology: how the Universe began and where it's going.
• Obtain an appreciation of the factors that could affect life in the Universe.

Laboratory Work

Due: See lab timetable
Weighting: 20%

The laboratory exercises consist of a variety of experiments of varying complexity, designed to familiarise students with fundamental concepts (C-Pracs), such as astronomical optics and eclipses, and with a variety of astronomical phenomena (P-Pracs). Most experiments are based on hands-on equipment, but there are several computer-based exercises. There will also be optional evening observing sessions at the Macquarie University Observatory scheduled during the semester, for which students must sign up. Students must complete six practicals in the laboratory.

This Assessment Task relates to the following Learning Outcomes:
• Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
• Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
• Have a basic understanding of the physics of light and gravity.
• Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can't actually touch.
• Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
• Understand how the earth's seasons arise and how eclipses of both Sun and moon occur.
• Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
• Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
Unit Schedule

Lecture 1: Tuesday 3pm E7B Mason Theatre
Lecture 2: Tuesday 4pm E7B Mason Theatre
Lecture 3: Thursday 1pm E7B Mason theatre

Laboratory work

Class size dictates 4 laboratory streams as below (each of size <72 students)

Stream 1: Thursday  E7B 209-13 10:00am - 12:00pm
Stream 2: Thursday  E7B 209-13 2:00pm - 4:00pm
Stream 3: Friday   E7B 209-13 10:00am - 12:00pm
Stream 4: Friday   E7B 209-13 2:00pm - 4:00pm

NB Laboratory work starts in week 4.

Required Unit Materials  A Lab notebook needs to be purchased from the co-op bookshop ($20).

Required Text book  Foundations of Astronomy, Michael A. Seeds (Author) and Dana Backman (Author), Published by Brooks/Cole, ISBN-13: 9780538733533, 12th edition. Also see web references under “Schedule of Topics”.

Unit Schedule

The unit is taught by Prof. Quentin A Parker & Dr. Lee Spitler and covers the following schedule of topics:

• Introduction
• Ancient Astronomy and the Development of Modern Astronomy
• Basic Optics
• Telescopes and other Detectors
• Basic Physics for Understanding Astronomy
• Astronomical Measurements
• Motions of the Sun, Moon and Planets
• The Solar System
• Stars and their Lifecycle
• Pulsars and Black Holes • Nebulae
• The Milky Way
Policies and Procedures

Galaxies

Peculiar Galaxies and Quasars

Cosmology and the large scale structure of the Universe

Life in the Universe and Astrobiology

Note: The progress of the course is generally in the sense of increasing scale.

The order of the lectures is not set in stone and may vary slightly depending on possible observing commitments of the lecturers (who are active researchers) and other factors. However all the topics will be covered!

Web Resources (interesting sites to look at; you can find many more):

Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

Academic Honesty Policy http://mq.edu.au/policy/docs/academic_honesty/policy.html

Unit guide ASTR170 Introductory Astronomy: Our Place in the Universe

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

**Student Code of Conduct**

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

**Student Support**

Macquarie University provides a range of support services for students. For details, visit [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)

**Learning Skills**

Learning Skills ([mq.edu.au/learningskills](http://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
- Academic Integrity Module for Students
- Ask a Learning Adviser

**Student Enquiry Service**

For all student enquiries, visit Student Connect at [ask.mq.edu.au](http://ask.mq.edu.au)

**Equity Support**

Students with a disability are encouraged to contact the [Disability Service](http://students.mq.edu.au/learning/disability_service/) who can provide appropriate help with any issues that arise during their studies.

**IT Help**

When using the University’s IT, you must adhere to the [Acceptable Use Policy](http://informatics.mq.edu.au/help/). The policy applies to all who connect to the MQ network including students.

**Graduate Capabilities**

**Commitment to Continuous Learning**

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships...
with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

**Learning outcomes**

- Have an understanding of the scale of the Universe and our relative place in it
- Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
- Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
- Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
- Have a basic understanding of the physics of light and gravity.
- Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can't actually touch.
- Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
- Understand how the earth's seasons arise and how eclipses of both Sun and moon occur.
- Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
- Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
- Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
- Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.
- Have a basic understanding of modern Cosmology: how the Universe began and where it's going.
- Obtain an appreciation of the factors that could affect life in the Universe.

**Assessment tasks**

- Final Examination
Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

- Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
- Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
- Have a basic understanding of the physics of light and gravity.
- Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can't actually touch.
- Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
- Understand how the earth's seasons arise and how eclipses of both Sun and moon occur.
- Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
- Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
- Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
- Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.
- Have a basic understanding of modern Cosmology: how the Universe began and where it's going.
• Obtain an appreciation of the factors that could affect life in the Universe.

Assessment tasks

• Final Examination
• Assignments (6)
• Laboratory Work

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:

Learning outcomes

• Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
• Have a basic understanding of modern Cosmology: how the Universe began and where it’s going.
• Obtain an appreciation of the factors that could affect life in the Universe.

Assessment tasks

• Final Examination
• Assignments (6)
• Laboratory Work

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes

• Have an understanding of the scale of the Universe and our relative place in it
• Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
• Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
• Have a basic understanding of the physics of light and gravity.
• Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.
• Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
• Understand how the earth's seasons arise and how eclipses of both Sun and moon occur.
• Have a basic understanding of the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
• Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
• Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
• Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
• Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.
• Have a basic understanding of modern Cosmology: how the Universe began and where it’s going.
• Obtain an appreciation of the factors that could affect life in the Universe.

Assessment tasks

• Final Examination
• Assignments (6)
• Laboratory Work

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

Learning outcomes

• Appreciate how the development of astronomy through history has altered our
perceptions (world view) of our physical universe
  • Obtain an appreciation of the factors that could affect life in the Universe.

Assessment task
  • Assignments (6)

Socially and Environmentally Active and Responsible
We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

Learning outcomes
  • Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
  • Obtain an appreciation of the factors that could affect life in the Universe.

Assessment tasks
  • Assignments (6)
  • Laboratory Work

Capable of Professional and Personal Judgement and Initiative
We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcomes
  • Have an understanding of the scale of the Universe and our relative place in it
  • Have an understanding how science advances through observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
  • Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
  • Obtain an appreciation of the factors that could affect life in the Universe.
Assessment tasks

- Final Examination
- Assignments (6)
- Laboratory Work

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

- Have an understanding of the scale of the Universe and our relative place in it
- Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
- Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional "paradigm shift"
- Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
- Have a basic understanding of the physics of light and gravity.
- Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.
- Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
- Understand how the earth’s seasons arise and how eclipses of both Sun and moon occur.
- Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
- Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from birth, life and death and how this is controlled by their birth mass.
- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
• Obtain a basic understanding of the structure and components of our galaxy, the Milky Way.
• Acquire a basic understanding of the nature and diversity of other galaxies, including extreme examples such as quasars. Also obtain a basic appreciation of the large-scale structure of the Universe as described by the distribution of galaxies.
• Have a basic understanding of modern Cosmology: how the Universe began and where it’s going.
• Obtain an appreciation of the factors that could affect life in the Universe.

Assessment tasks
• Final Examination
• Assignments (6)
• Laboratory Work

Critical, Analytical and Integrative Thinking
We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

Learning outcomes
• Appreciate how the development of astronomy through history has altered our perceptions (world view) of our physical universe
• Have an understanding how science advances though observation and incrementally for the most part via the scientific method with the occasional “paradigm shift”
• Appreciate how our current knowledge is based on the development of enabling technology and especially through advances in the practical tools of modern astronomy: telescopes, imaging detectors and spectrographs
• Have a basic understanding of the physics of light and gravity.
• Obtain an understanding for how astronomical measurements are made and how they underpin everything we know: especially how we study objects we can’t actually touch.
• Have an understanding of the Motions of the Sun, Moon and planets in our solar system across the sky.
• Have a basic understanding of the the structure of the Sun and its family, the Solar System (planets, comets, asteroids etc).
• Have a basic understanding of the panoply of Stars and their evolutionary lifecycle from
birth, life and death and how this is controlled by their birth mass.

- Appreciate the complexity of the material that exists between the stars: the interstellar medium and its extreme range of physical conditions (temperature and density).
