Co-badged status

Unit description
This unit examines the use of statistical models in the insurance context. Statistical models of the number of claims and the sizes of the claims are studied. These models are used as a basis for the study of risk theory, ruin theory and the effect of reinsurance. Decision theory and simulation are also studied. Students gaining a grade of credit or higher in both ACST356 and ACST357 are eligible for exemption from subject CT6 of the professional exams of the Institute of Actuaries of Australia.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are available at https://students.mq.edu.au/important-dates
Learning Outcomes

1. Model insurance claims using loss distributions and Bayesian analysis
2. Perform Monte Carlo simulation for insurance models
3. Apply premium principles to price insurance products
4. Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
5. Apply credibility theory and decision theory to insurance problems

General Assessment Information

It is the responsibility of students to view their marks for each within session assessment on iLearn within 20 working days of posting. If there are any discrepancies, students must contact the unit convenor immediately. Failure to do so will mean that queries received after the release of final results regarding assessment marks (not including the final exam mark) will not be addressed.

Assessment criteria for all assessment tasks will be provided on the unit iLearn site.

Assignment

Due: Week 3 and Week 12
Weighting: 15%

There are two written assignments due in Week 3 (5%) and Week 12 (10%). Marks will be granted for accuracy and clarity of the work submitted.

No extensions will be granted. Students who have not submitted the task prior to the deadline will be awarded a mark of zero (0) for the task, except for cases in which an application for disruption to studies is made and approved.
It is the responsibility of students to view their marks for each within session assessment on iLearn within 20 working days of posting. If there are any discrepancies, students must contact the unit convenor immediately. Failure to do so will mean that queries received after the release of final results regarding assessment marks (not including the final exam mark) will not be addressed.

Assessment criteria and submission method will be provided on the unit iLearn site.

This Assessment Task relates to the following Learning Outcomes:
- Model insurance claims using loss distributions and Bayesian analysis
- Perform Monte Carlo simulation for insurance models
- Apply premium principles to price insurance products
- Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
- Apply credibility theory and decision theory to insurance problems

Final exam
Due: Exam period
Weighting: 70%

A three-hour (3) written exam will be held during the normal university exam period. Questions will cover the entire unit. Marks will be granted for accuracy and clarity of the work shown.

You are permitted one (1) A4 page of paper containing reference material printed on both sides. The material may be handwritten or typed. The page will not be returned to you at the end of the final exam. Non-programmable calculators with no text-retrieval capacity are permitted.

Students who do not attend the final exam will be awarded a mark of zero (0) for the exam, except for cases in which an application for disruption to studies is made and approved.

This Assessment Task relates to the following Learning Outcomes:
- Model insurance claims using loss distributions and Bayesian analysis
- Perform Monte Carlo simulation for insurance models
Apply premium principles to price insurance products
• Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
• Apply credibility theory and decision theory to insurance problems

Class Test
Due: Week 7
Weighting: 15%

The class test covers the lecture content in Week 1 to Week 5. Students will have 75 minutes to complete the test. Marks will be granted for accuracy and clarity of the work submitted. It will be conducted in the lecture on Monday 10 April at 8:30am.

You are permitted one (1) A4 page of paper containing reference material printed on both sides. The material may be handwritten or typed. The page will not be returned to you at the end of the class test.

Students who do not attend the class test will be awarded a mark of zero (0) for the test, except for cases in which an application for disruption to studies is made and approved.

It is the responsibility of students to view their marks for each within session assessment on iLearn within 20 working days of posting. If there are any discrepancies, students must contact the unit convenor immediately. Failure to do so will mean that queries received after the release of final results regarding assessment marks (not including the final exam mark) will not be addressed.

Assessment criteria will be provided on the unit iLearn site.

This Assessment Task relates to the following Learning Outcomes:
• Model insurance claims using loss distributions and Bayesian analysis

Delivery and Resources

The timetable for classes can be found on the University website at:
https://timetables.mq.edu.au/2017/
Lecture notes are available for download from iLearn. You will need to print the lecture notes and bring them to classes to complete.

From Week 8 onward, the required textbook is:

Other references include:

Students will be required to use iLearn, Excel, PDF, Word, and a non-programmable calculator.

**Unit Schedule**

Week 1  Loss Models I
Week 2  Loss Models II
Week 3  Loss Models III
Week 4  Loss Models IV
Week 5  Reinsurance and Deductibles
Week 6  Simulation
Week 7  Class Test
Week 8  Premium Principles
Week 9  Risk Models
Week 10  Ruin Theory
Week 11  Ruin Theory with Reinsurance
Week 12  Credibility Theory
Week 13  Decision Theory
Policies and Procedures

Macquarie University policies and procedures are accessible from Policy Central. Students should be aware of the following policies in particular with regard to Learning and Teaching:

In addition, a number of other policies can be found in the Learning and Teaching Category of Policy Central.

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: [https://students.mq.edu.au/support/student_conduct/](https://students.mq.edu.au/support/student_conduct/)

Results

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

Supplementary exams

Information regarding supplementary exams, including dates, is available at: [http://www.businessandeconomics.mq.edu.au/current_students/undergraduate/how_do_i/special_consideration](http://www.businessandeconomics.mq.edu.au/current_students/undergraduate/how_do_i/special_consideration)

Student Support

Macquarie University provides a range of support services for students. For details, visit [http://students.mq.edu.au/support/](http://students.mq.edu.au/support/)

Learning Skills

Learning Skills ([mq.edu.au/learningskills](http://mq.edu.au/learningskills)) provides academic writing resources and study strategies to improve your marks and take control of your study.

- Workshops
- StudyWise
Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

**Learning outcomes**

- Model insurance claims using loss distributions and Bayesian analysis
- Perform Monte Carlo simulation for insurance models
- Apply premium principles to price insurance products
- Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
- Apply credibility theory and decision theory to insurance problems

**Assessment tasks**

- Assignment
- Final exam
- Class Test
Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

**Learning outcomes**

- Model insurance claims using loss distributions and Bayesian analysis
- Perform Monte Carlo simulation for insurance models
- Apply premium principles to price insurance products
- Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
- Apply credibility theory and decision theory to insurance problems

**Assessment tasks**

- Assignment
- Final exam
- Class Test

Critical, Analytical and Integrative Thinking

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

**Learning outcomes**

- Model insurance claims using loss distributions and Bayesian analysis
- Perform Monte Carlo simulation for insurance models
- Apply premium principles to price insurance products
- Construct risk models with frequency and severity distributions and apply ruin theory to insurance problems
- Apply credibility theory and decision theory to insurance problems
