Unit description
This unit is devoted to examining the ways in which evolutionary biology can shed light on the nature of the human mind and culture. The unit begins with an introduction to evolutionary theory and a discussion of some foundational issues concerning its nature and structure. It explains its central concepts such as natural selection, fitness, adaption, and units of selection. It will also debate current modifications to evolutionary theory, such as evolutionary developmental biology, niche construction and the so called Extended Synthesis. A substantial part of the unit, however, involves investigating extensions of evolutionary theory to the explanation of human mind and culture. In particular, recent theories of cultural and cognitive evolution such as Evolutionary Psychology, gene-culture coevolution, and cognitive-developmental niche construction will be examined in detail. Issues, such as the ambitions and limitations of evolutionary explanations of human ethical and sexual behaviour will also be discussed. No background in biology or science is assumed.

Important Academic Dates
Information about important academic dates including deadlines for withdrawing from units are

https://unitguides.mq.edu.au/unit_offerings/84263/unit_guide/print
Learning Outcomes

1. A working knowledge of some of the current major issues connecting philosophy and biology
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
4. An ability to express and expound the positions studied clearly and lucidly
5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

General Assessment Information

All tasks will be assessed using the criteria listed under the description of each task, such as: Understanding, critical evaluation, written expression (etc). A detailed rubric for each task will be supplied on iLearn.

Class participation

Due: Ongoing
Weighting: 20%

This unit is held similar to a seminar, with some discussion in class, particularly in the weeks without tutorials (2, 4, 5, 7, 8, 10, and 11). There will only be 4 Tutorials, Week 3, 6, 9 and 12.

The participation mark is based in part on the extent to which students come to class (both lecture and tutorial) well prepared, having done the required reading and devised questions and
discussion points. It is also based on the extent to which students make a constructive contribution to classroom discussion, so students should come to class with prepared questions and discussion points.

Grading: Students will receive a grade for participation at the end of term.

Class participation marking criteria:

- **Outstanding contributor:** Contributions in class reflect extensive preparation. Ideas offered are usually substantive; provide major insights and direction for class discussion. Challenges are substantiated and persuasive. Makes an important contribution to class discussion overall.

- **Good contributor:** Contributions in class reflect thorough preparation. Ideas offered are often substantive; provide useful insights and some direction for class discussion. Challenges are substantiated and often persuasive. Makes a significant contribution to class discussion overall.

- **Adequate contributor:** Contributions in class reflect adequate preparation. Ideas offered are sometimes substantive; provide some insight but rarely offer direction for class discussion. Challenges are sometimes presented, substantiated and persuasive. Makes a contribution to class discussion overall.

- **Unsatisfactory contributor:** Contributions in class reflect inadequate preparation. Ideas offered are rarely substantive; rarely provide insight but do not offer useful direction for class discussion. Contributions may be distractions rather than constructive. Does not make a positive contribution to class discussion overall.

- **Non-participant:** This person says little or nothing in class. There is not an adequate basis for evaluation. Makes no contribution to discussion.

**External** students are required to post online a discussion point in response to set readings during the week (Mon-Fri) in which those readings are set. They should also provide courteous and relevant feedback on at least one other post each week for an absolute minimum of 7 weeks of the semester. The marking criteria are the same as for internal students.

Grading: Out of 10 per week, averaged over the 10 best

Interim report will be given.

This Assessment Task relates to the following Learning Outcomes:

- 1. A working knowledge of some of the current major issues connecting philosophy and
biology
• 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
• 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
• 4. An ability to express and expound the positions studied clearly and lucidly
• 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Fortnightly online quiz
Due: **Week 2-11**
Weighting: **20%**

Online quiz need to be answered every second week. Answers are based on the reading.

Assessment:

This assessment task will be assessed by the following criteria set out in the following learning outcomes:

1. A working knowledge of some of the current major issues connecting philosophy and biology
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
3. An ability to understand and critically evaluate theories and arguments in the philosophy of biology
4. An ability to express and expound the positions studied clearly and lucidly
5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing

Grading: Students have to submit answers to all quiz question, from Week 2-11. They will have to submit answers to the questions for at least 7 weeks to get a pass.

Grade: between 1-100, depend on the numbers of questions answered correctly.

This Assessment Task relates to the following Learning Outcomes:
• 1. A working knowledge of some of the current major issues connecting philosophy and biology
• 2. The ability to understand and critically evaluate the theories and arguments studied,
identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views

- 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
- 4. An ability to express and expound the positions studied clearly and lucidly
- 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Essay Plan

Due: **Week 10**

Weighting: **10%**

Students will write a 1-2 page plan or outline for their essay. This will contain the main thesis, arguments and evidence to support it, potential objections and reply to these objection, a summary and a list of references. A guide for how to write such a plan will be made available on iLearn.

Assessment:

This assessment task will be assessed by the following criteria set out in the following learning outcomes:

1. A working knowledge of some of the current major issues connecting philosophy and biology
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
3. An ability to understand and critically evaluate theories and arguments in the philosophy of biology.
4. An ability to express and expound the positions studied clearly and lucidly
5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing

Submission Instructions for Internal Students: Students will bring their plan to the tutorial in week 9 for peer discussion and feedback. Submission Instructions for External Students: External students will post their essay plans to the external students forum by week 9 and provide feedback on at least one other plan by week 10.

Feedback: Students will get feedback from convenor, plus there will be a peer feedback exercise

Grading: Pass for submission or Fail for no submission.

This Assessment Task relates to the following Learning Outcomes:

- 1. A working knowledge of some of the current major issues connecting philosophy and
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.

3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.

4. An ability to express and expound the positions studied clearly and lucidly.

5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

**Essay**

**Due:** Week 13  
**Weighting:** 50%

Students will write a research essay of 3,000 words which provides a careful critical examination, based on reasons, argumentation and evidence, of one of the topics covered in the course. A list of essay questions will be made available on iLearn. There will be a guide on how to write a successful essay on iLearn.

**Assessment:**

This assessment task will be assessed by the following criteria set out in the following learning outcomes:

1. A working knowledge of some of the current major issues connecting philosophy and biology.
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.
3. An ability to understand and critically evaluate theories and arguments in the philosophy of biology.
4. An ability to express and expound the positions studied clearly and lucidly.
5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Submission via Turnitin.

**Gradings:** Students will receive a grade out of 100 for the paper. A grading rubric will be available on iLearn.

This Assessment Task relates to the following Learning Outcomes:

- 1. A working knowledge of some of the current major issues connecting philosophy and biology.
• 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.
• 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
• 4. An ability to express and expound the positions studied clearly and lucidly.
• 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Delivery and Resources
This unit uses an iLearn website and Echo360 lecture recordings (https://ilearn.mq.edu.au/login/MQ/). The website contains links to lecture notes, ilecture recordings, and other learning materials. Students will therefore require access to a computer and a good internet connection in order to access all the material, and participate in the unit effectively.

Together with a careful attention to the assigned readings, the lectures will be delivered in a seminar style, which will include some discussion. They are also designed to provide an important foundation for tutorial discussions which will be held every three weeks. In order to get the most of those discussions and to foster a sense of common intellectual purpose, attendance at all lectures is mandatory. If you have a regular conflict that will prevent you from attending one or both of the lectures, you should consider enrolling as an external student.

Seminars and Tutorial Times
Seminars are on Tuesday 4-6pm, C5A, in 12 SW 313

Tutorials take place every three weeks (Week 3, 6, 9, & 12) on Thurs afternoons: 3-4pm, and 4-5pm W5A, 23 Wallys Walk 201,

Students are not required to purchase any books for this course. All readings for tutorials will be made available via iLearn. Further readings for essays will be recommended.

Readings
All readings will be made available on iLearn. Most readings are taken from these textbooks:

A few readings come from these books:

Unit guide PHL 249 Evolution, Mind and Culture

**Week 1. Philosophy of Biology**

2. PGS, Chapter 1 “Philosophy and Biology”

**Week 2. The Received View of Evolution**

1. S&G, Chapter 2 “The Received View of Evolution”

**Week 3. Individuals & Levels of selection**

2. PGS, Chapter 5 “Individuals”

**Week 4. Molecular and Behavioral Genetics**

Optional:

**Week 5: Adaptationism, Functions and Naturalised Teleology**

1. PGS Chapter 4 Adaptation, Construction and Function

Optional:

https://unitguides.mq.edu.au/unit_offers/84263/unit_guide/print

**Week 6: Developmental Systems Theory**

1. S&G, Ch 5. The Developmental Systems Alternative, pp. 94-111

Optional:

**Week 7: Extended Evolutionary Synthesis**

**Week 8: Evolution and Social Behavior**

1. S&G, Chapter 13. “From Sociobiology to Evolutionary Psychology”

2. PGS, Chapter 8. “Evolution and social behavior”

**Week 9: Naturalized epistemologies**

2. Gontier, Nathalie (20) "Evolutionary Epistemology". The Internet Encyclopedia of Philosophy, James Fieser and Bradley Dowden (eds.). URL: http://www.iep.utm.edu/eds/

Optional:

**Week 10: Cultural Evolution and Niche construction**

Week 11: Developmental Niche Construction

Week 12: Human Nature
Optional:

**Policies and Procedures**

Macquarie University policies and procedures are accessible from Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- Academic Appeals Policy
- Academic Integrity Policy
- Academic Progression Policy
- Assessment Policy
- Fitness to Practice Procedure
- Grade Appeal Policy
• Complaint Management Procedure for Students and Members of the Public
• Special Consideration Policy (Note: The Special Consideration Policy is effective from 4 December 2017 and replaces the Disruption to Studies Policy.)

Undergraduate students seeking more policy resources can visit the Student Policy Gateway (https://students.mq.edu.au/support/study/student-policy-gateway). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit Policy Central (https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central).

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: https://students.mq.edu.au/study/getting-started/student-conduct

Results

Results shown in iLearn, or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in eStudent. For more information visit ask.mq.edu.au.

Student Support

Macquarie University provides a range of support services for students. For details, visit http://students.mq.edu.au/support/

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

• Workshops
• StudyWise
• Academic Integrity Module for Students
• Ask a Learning Adviser

Student Enquiry Service

For all student enquiries, visit Student Connect at ask.mq.edu.au

Equity Support

Students with a disability are encouraged to contact the Disability Service who can provide appropriate help with any issues that arise during their studies.

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/
Graduate Capabilities

Problem Solving and Research Capability

Our graduates should be capable of researching; of analysing, and interpreting and assessing data and information in various forms; of drawing connections across fields of knowledge; and they should be able to relate their knowledge to complex situations at work or in the world, in order to diagnose and solve problems. We want them to have the confidence to take the initiative in doing so, within an awareness of their own limitations.

This graduate capability is supported by:

Learning outcomes

1. A working knowledge of some of the current major issues connecting philosophy and biology
2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
4. An ability to express and expound the positions studied clearly and lucidly
5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Assessment tasks

- Class participation
- Fortnightly online quiz
- Essay Plan
- Essay

Creative and Innovative

Our graduates will also be capable of creative thinking and of creating knowledge. They will be imaginative and open to experience and capable of innovation at work and in the community. We want them to be engaged in applying their critical, creative thinking.

This graduate capability is supported by:
Learning outcomes

- 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.
- 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Effective Communication

We want to develop in our students the ability to communicate and convey their views in forms effective with different audiences. We want our graduates to take with them the capability to read, listen, question, gather and evaluate information resources in a variety of formats, assess, write clearly, speak effectively, and to use visual communication and communication technologies as appropriate.

This graduate capability is supported by:

Learning outcomes

- 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.
- 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
- 4. An ability to express and expound the positions studied clearly and lucidly.
- 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Assessment tasks

- Class participation
- Fortnightly online quiz
- Essay Plan

Engaged and Ethical Local and Global citizens

As local citizens our graduates will be aware of indigenous perspectives and of the nation's historical context. They will be engaged with the challenges of contemporary society and with
knowledge and ideas. We want our graduates to have respect for diversity, to be open-minded, sensitive to others and inclusive, and to be open to other cultures and perspectives: they should have a level of cultural literacy. Our graduates should be aware of disadvantage and social justice, and be willing to participate to help create a wiser and better society.

This graduate capability is supported by:

**Learning outcomes**

- 1. A working knowledge of some of the current major issues connecting philosophy and biology
- 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views
- 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

**Socially and Environmentally Active and Responsible**

We want our graduates to be aware of and have respect for self and others; to be able to work with others as a leader and a team player; to have a sense of connectedness with others and country; and to have a sense of mutual obligation. Our graduates should be informed and active participants in moving society towards sustainability.

This graduate capability is supported by:

**Learning outcome**

- 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views

**Commitment to Continuous Learning**

Our graduates will have enquiring minds and a literate curiosity which will lead them to pursue knowledge for its own sake. They will continue to pursue learning in their careers and as they participate in the world. They will be capable of reflecting on their experiences and relationships with others and the environment, learning from them, and growing - personally, professionally and socially.

This graduate capability is supported by:

**Learning outcomes**

- 3. Synthesize and analyze information from a variety of sources concerning foundational
concepts and arguments in biology and philosophy.

• 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Assessment tasks

• Fortnightly online quiz
• Essay Plan
• Essay

Capable of Professional and Personal Judgement and Initiative

We want our graduates to have emotional intelligence and sound interpersonal skills and to demonstrate discernment and common sense in their professional and personal judgement. They will exercise initiative as needed. They will be capable of risk assessment, and be able to handle ambiguity and complexity, enabling them to be adaptable in diverse and changing environments.

This graduate capability is supported by:

Learning outcome

• 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

Assessment task

• Essay

Discipline Specific Knowledge and Skills

Our graduates will take with them the intellectual development, depth and breadth of knowledge, scholarly understanding, and specific subject content in their chosen fields to make them competent and confident in their subject or profession. They will be able to demonstrate, where relevant, professional technical competence and meet professional standards. They will be able to articulate the structure of knowledge of their discipline, be able to adapt discipline-specific knowledge to novel situations, and be able to contribute from their discipline to inter-disciplinary solutions to problems.

This graduate capability is supported by:

Learning outcomes

• 1. A working knowledge of some of the current major issues connecting philosophy and biology
• 2. The ability to understand and critically evaluate the theories and arguments studied,
identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.

- 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
- 4. An ability to express and expound the positions studied clearly and lucidly.
- 5. Students should start to develop their own philosophically informed views on the issues studied and defend their views, clearly and courteously in response to critical evaluation from others in discussion and in writing.

- Class participation
- Fortnightly online quiz
- Essay Plan
- Essay

**Critical, Analytical and Integrative Thinking**

We want our graduates to be capable of reasoning, questioning and analysing, and to integrate and synthesise learning and knowledge from a range of sources and environments; to be able to critique constraints, assumptions and limitations; to be able to think independently and systemically in relation to scholarly activity, in the workplace, and in the world. We want them to have a level of scientific and information technology literacy.

This graduate capability is supported by:

**Learning outcomes**

- 1. A working knowledge of some of the current major issues connecting philosophy and biology.
- 2. The ability to understand and critically evaluate the theories and arguments studied, identify their strengths and weaknesses, and develop an appreciation of the ways in which these positions have developed in response to identification of problems in other views.
- 3. Synthesize and analyze information from a variety of sources concerning foundational concepts and arguments in biology and philosophy.
- 4. An ability to express and expound the positions studied clearly and lucidly.

Changes from Previous Offering

A new unit schedule and new resources.

Late submission

Late Submissions - Guidelines

Tasks 10% or less. No extensions will be granted. Students who have not submitted the task prior to the deadline will be awarded a mark of 0 for the task, except for cases in which an application for Special Consideration is made and approved.

Tasks above 10%. No extensions will be granted. Students who submit late work without an extension will receive a penalty. This penalty does not apply for cases in which an application for Special Consideration is made and approved.

Late Submission: “Unless a Special Consideration request has been submitted and approved, (a) a penalty for lateness will apply – two (2) marks out of 100 will be deducted per day for assignments submitted after the due date – and (b) no assignment will be accepted more than seven (7) days (incl. weekends) after the original submission deadline. No late submissions will be accepted for timed assessments – e.g. quizzes, online tests.”
