50 Waterloo Road

Monday 1-3pm

Credit points

4

Prerequisites

Admission to MEng

Corequisites

Co-badged status

ENGG450, ENGG650

Unit description

This unit deals with the design of complex systems from an integrated perspective, concentrating on methods for maximising system performance. The unit includes elements of system design covering the complete lifecycle of engineering systems, including needs identification, functional analysis and optimisation, detailed design and development, financial analysis, and optimisation methods.

Important Academic Dates

Information about important academic dates including deadlines for withdrawing from units are available at <https://www.mq.edu.au/study/calendar-of-dates>

Learning Outcomes

On successful completion of this unit, you will be able to:

Understand the reasons for, and be able to use, appropriate processes for designing engineering systems

Use appropriate tools to perform critical analysis, decision making, and problem solving.

Demonstrate ability in project management and group work skills

Demonstrate ability in self-learning and information retrieval skills

Demonstrate ability in oral and written communication skills for system design and

engineering

Demonstrate understanding of the role and impact of engineers in society

General Assessment Information

Classes are co-taught, however for assessment purposes any group work must be completed with students enrolled in the same unit.

Grading and passing requirement for unit

In order to pass this unit a student must obtain a mark of 50 or more for the unit (i.e. obtain a passing grade P/ CR/ D/ HD).

For further details about grading, please refer below to the *policies and procedures* section.

If you receive special consideration for the final exam, a supplementary exam will be scheduled in the supplementary examination period (currently 15-19 July 2019). By making a special consideration application for the final exam you are declaring yourself available for a resit during the supplementary examination period and will not be eligible for a second special consideration approval based on pre-existing commitments. Please ensure you are familiar with the policy prior to submitting an application. Approved applicants will receive an individual notification one week prior to the exam with the exact date and time of their supplementary examination.

Hurdle Requirements

Participation in tutorial sessions is a hurdle requirement and students are required to attend at least 10/12 tutorial sessions to pass this unit.

Late submissions and Resubmissions

Late submissions will attract a penalty of 20/100 marks per day. Extenuating circumstances will be considered upon lodgement of a formal notice of *Special Consideration*.

Resubmissions of work are not allowed.

Students are reminded of University policies on Assessment, Academic Integrity and Special Consideration outlined below in the *policies and procedures* section.

Assessment Tasks

Name	Weighting	Hurdle	Due
<u>Participation</u>	10%	Yes	Weekly
<u>Quizzes</u>	10%	No	Weekly
<u>Projects/Assignments</u>	40%	No	see details on iLearn
<u>Final Exam</u>	40%	No	Examination Period

Participation

Due: **Weekly**

Weighting: **10%**

This is a hurdle assessment task (see [assessment policy](#) for more information on hurdle assessment tasks)

Students are expected to actively participate in and contribute to class discussions. Marks will be awarded based on the quality and quantity of participation.

Please consult the Unit Schedule for details of the weekly readings and other learning activities.

This is a hurdle assessment, and failure to achieve the required level of participation will result in a Fail Hurdle grade.

On successful completion you will be able to:

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Quizzes

Due: **Weekly**

Weighting: **10%**

Weekly worked quizzes on material for discussion to be completed before the Due Date specified.

On successful completion you will be able to:

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Demonstrate ability in self-learning and information retrieval skills

Projects/Assignments

Due: **see details on iLearn**

Weighting: **40%**

There are four assessable tasks that will build on each other. Deliverables associated with these projects and assignments are to be submitted as PDF formatted documents via iLearn for

assessment. Plagiarism detection software will be utilised to ensure adherence with University policies. Peer assessment may be applied in group projects.

On successful completion you will be able to:

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in project management and group work skills
- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Final Exam

Due: **Examination Period**

Weighting: **40%**

Moderated 3 hour open-book examination at the end of semester. Any texts, notes or other aides (except communication devices) may be used.

On successful completion you will be able to:

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Demonstrate ability in oral and written communication skills for system design and engineering

Delivery and Resources

COMMUNICATIONS

- Students are reminded the University will communicate all official notices to you by email to your university email account. Please read your @student.mq.edu.au email regularly, or forward it to an account you do read regularly.
- All announcements and other communications regarding this unit will be via the unit iLearn website, <https://ilearn.mq.edu.au/>
- *Please do not email unit convenors and tutors directly, but instead use the "General Discussion" or "Dialogue" tabs on the unit website in iLearn.*

TEXTBOOK

- B. S. Blanchard & W. J. Fabrycky, Systems Engineering and Analysis, Pearson, 5th

edition, 2014.

- It is expected that every student will have access to this textbook - weekly readings are assigned (see the Unit Schedule on the unit's iLearn website) and must be completed before class.

OTHER RESOURCES

- The iLearn web page for this unit can be found at: <https://ilearn.mq.edu.au/login/MQ/>
- All unit resources and communications relating to this unit, including a week-by-week schedule of learning and assessment activities, will be provided via the iLearn unit website.

TEACHING AND LEARNING STRATEGY

- Classes in ENGG450/650/851 involve pre-reading of the text followed by class discussions of the material, and working through of example problems. In later weeks students take the role of lecturer, moderating the presentation and discussions. This mode of teaching and learning is used to develop self-learning and communication skills, which are particularly important when working as a professional engineer.
- Please refer to the Document “ENGG450/650/851 Timetable” for week-by-week details of class activities, due dates for assessment tasks, and other relevant information.

ASSESSMENT

- To complete this unit satisfactorily all assessable tasks must be completed.
- Assessable tasks are to be completed by the due date indicated in the unit schedule - requests for extension must be submitted to the unit coordinator before the due date.
- Assessable work should conform to accepted standards for professional communication (e.g. in formatting, presentation, spelling, clarity, etc.) A useful resource on Engineering Communications may be found at <http://www.engineering.utoronto.ca/Directory/students/ecp/handbook.htm>

TECHNOLOGY USED

- The iLearn web page for this unit can be found at: <https://ilearn.mq.edu.au/login/MQ/>
- All unit resources and communications relating to this unit will be provided via the iLearn unit website.

Learning and Teaching Activities

Weekly classes

Tutorial/discussion of course material.

Guest lectures

Guest lectures on how system design and engineering is used in specific industries (e.g. telecommunications, medical devices, etc).

Group projects and individual assignments

Four system analysis or system design tasks or problems to be completed during semester.

Student presentations

Student presentations of course material to class.

Policies and Procedures

Macquarie University policies and procedures are accessible from [Policy Central](https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central) (<https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central>). Students should be aware of the following policies in particular with regard to Learning and Teaching:

- [Academic Appeals Policy](#)
- [Academic Integrity Policy](#)
- [Academic Progression Policy](#)
- [Assessment Policy](#)
- [Fitness to Practice Procedure](#)
- [Grade Appeal Policy](#)
- [Complaint Management Procedure for Students and Members of the Public](#)
- [Special Consideration Policy](#) (**Note:** *The Special Consideration Policy is effective from 4 December 2017 and replaces the Disruption to Studies Policy.*)

Undergraduate students seeking more policy resources can visit the [Student Policy Gateway](https://students.mq.edu.au/support/study/student-policy-gateway) (<https://students.mq.edu.au/support/study/student-policy-gateway>). It is your one-stop-shop for the key policies you need to know about throughout your undergraduate student journey.

If you would like to see all the policies relevant to Learning and Teaching visit [Policy Central](https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central) (<https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policy-central>).

Student Code of Conduct

Macquarie University students have a responsibility to be familiar with the Student Code of Conduct: <https://students.mq.edu.au/study/getting-started/student-conduct>

Results

Results published on platform other than [eStudent](#), (eg. iLearn, Coursera etc.) or released directly by your Unit Convenor, are not confirmed as they are subject to final approval by the University. Once approved, final results will be sent to your student email address and will be made available in [eStudent](#). For more information visit ask.mq.edu.au or if you are a Global MBA student contact globalmba.support@mq.edu.au

Student Support

Macquarie University provides a range of support services for students. For details, visit <http://students.mq.edu.au/support/>

Learning Skills

Learning Skills (mq.edu.au/learningskills) provides academic writing resources and study strategies to improve your marks and take control of your study.

- [Workshops](#)
- [StudyWise](#)
- [Academic Integrity Module for Students](#)
- [Ask a Learning Adviser](#)

Student Services and Support

Students with a disability are encouraged to contact the [Disability Service](#) who can provide appropriate help with any issues that arise during their studies.

Student Enquiries

For all student enquiries, visit Student Connect at ask.mq.edu.au

If you are a Global MBA student contact globalmba.support@mq.edu.au

IT Help

For help with University computer systems and technology, visit http://www.mq.edu.au/about_us/offices_and_units/information_technology/help/.

When using the University's IT, you must adhere to the [Acceptable Use of IT Resources Policy](#). The policy applies to all who connect to the MQ network including students.

Graduate Capabilities

PG - Capable of Professional and Personal Judgment and Initiative

Our postgraduates will demonstrate a high standard of discernment and common sense in their professional and personal judgment. They will have the ability to make informed choices and decisions that reflect both the nature of their professional work and their personal perspectives.

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.

- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments
- Final Exam

Learning and teaching activities

- Tutorial/discussion of course material.
- Guest lectures on how system design and engineering is used in specific industries (e.g. telecommunications, medical devices, etc).
- Four system analysis or system design tasks or problems to be completed during semester.

PG - Discipline Knowledge and Skills

Our postgraduates will be able to demonstrate a significantly enhanced depth and breadth of knowledge, scholarly understanding, and specific subject content knowledge in their chosen fields.

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in project management and group work skills
- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments

- Final Exam

Learning and teaching activities

- Tutorial/discussion of course material.
- Guest lectures on how system design and engineering is used in specific industries (e.g. telecommunications, medical devices, etc).
- Four system analysis or system design tasks or problems to be completed during semester.
- Student presentations of course material to class.

PG - Critical, Analytical and Integrative Thinking

Our postgraduates will be capable of utilising and reflecting on prior knowledge and experience, of applying higher level critical thinking skills, and of integrating and synthesising learning and knowledge from a range of sources and environments. A characteristic of this form of thinking is the generation of new, professionally oriented knowledge through personal or group-based critique of practice and theory.

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments
- Final Exam

Learning and teaching activities

- Tutorial/discussion of course material.
- Four system analysis or system design tasks or problems to be completed during semester.
- Student presentations of course material to class.

PG - Research and Problem Solving Capability

Our postgraduates will be capable of systematic enquiry; able to use research skills to create new knowledge that can be applied to real world issues, or contribute to a field of study or practice to enhance society. They will be capable of creative questioning, problem finding and problem solving.

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in project management and group work skills
- Demonstrate ability in self-learning and information retrieval skills

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments
- Final Exam

Learning and teaching activities

- Tutorial/discussion of course material.
- Four system analysis or system design tasks or problems to be completed during semester.
- Student presentations of course material to class.

PG - Effective Communication

Our postgraduates will be able to communicate effectively and convey their views to different social, cultural, and professional audiences. They will be able to use a variety of technologically supported media to communicate with empathy using a range of written, spoken or visual formats.

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Demonstrate ability in project management and group work skills
- Demonstrate ability in self-learning and information retrieval skills

- Demonstrate ability in oral and written communication skills for system design and engineering

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments
- Final Exam

Learning and teaching activities

- Tutorial/discussion of course material.
- Guest lectures on how system design and engineering is used in specific industries (e.g. telecommunications, medical devices, etc).
- Four system analysis or system design tasks or problems to be completed during semester.
- Student presentations of course material to class.

PG - Engaged and Responsible, Active and Ethical Citizens

Our postgraduates will be ethically aware and capable of confident transformative action in relation to their professional responsibilities and the wider community. They will have a sense of connectedness with others and country and have a sense of mutual obligation. They will be able to appreciate the impact of their professional roles for social justice and inclusion related to national and global issues

This graduate capability is supported by:

Learning outcomes

- Understand the reasons for, and be able to use, appropriate processes for designing engineering systems
- Use appropriate tools to perform critical analysis, decision making, and problem solving.
- Demonstrate ability in self-learning and information retrieval skills
- Demonstrate ability in oral and written communication skills for system design and engineering
- Demonstrate understanding of the role and impact of engineers in society

Assessment tasks

- Participation
- Quizzes
- Projects/Assignments
- Final Exam

Learning and teaching activities

- Guest lectures on how system design and engineering is used in specific industries (e.g. telecommunications, medical devices, etc).
- Four system analysis or system design tasks or problems to be completed during semester.

Changes from Previous Offering

This, the last running of ENGG450/650/851 will use multi stage group discussions to explore facets of the unit's topics. Each student will be involved with a small group that will present to a larger group thought and conclusions about the topic at hand.

Changes in Response to Student Feedback

The teaching approach has been modified with less emphasis on text book regurgitation and more on individual and group exploration.
